### Elpress (Beijing)

Electrical Components Co., Ltd Rm 1605, Diyang Tower, No. H2 DongsanhuanBei Lu, Chaoyang District, Beijing 100027, P.R. China Tel:+86 10 5979 6187 Fax:+86 10 6438 5279 info@elpress.com.cn www.elpress.com.cn

Elpress has been developing, manufacturing and marketing complete cable crimping systems for electrical connectors since 1959.

The Elpress Group, consisting of Elpress and ABIKO business areas, is owned by Lagercrantz Group AB. Elpress head office, factory and warehouse are located in Kramfors, Sweden. Subsidiaries Elpress GmbH, Elpress A/S, Elpress AS, Elpress (Beijing) Ltd. and Elpress Inc. with local warehouses in Silkeborg/Denmark, Beijing/China and Chicago/USA.

The information contained in this catalogue is for commercial use to select products only. It is not intended for use in QA instructions, production drawings, instruction manuals or likewise. If such documentation is required, please contact your nearest Elpress representative or Elpress directly. Although every effort has been made to ensure correct and updated information at time of printing, Elpress makes reservation for misprints, wrong or outdated information and changes. Elpress reserve the right to change, update or discontinue products without prior notice.

# **Certification and standards**

Elpress products and services, are designed to minimise environmental impact, to protect limited resources and to take the life-cycle perspective into consideration in connection with:

- Product development.
- Manufacturing.
- Use and withdrawal of products.

Each and every Elpress employee shall prioritize the personal responsibility for safety, quality and the environment within his daily work routine. Information and education will constitute normal activity for increased awareness.

Our suppliers and commissioned partners are chosen and influenced in such a way that they can comply with and add value to our Policy.

Our customers are informed about our environmental dedication and our partners have all the necessary knowledge to assist and advise all parties of the distribution chain and safeguard the proper use, stocking and final disposal of our products.

We continuously evaluate the results of our Policy and openly distribute information on our work and impact on the environment.

Our environment work has resulted in Elpress being certified to ISO 14001 since 2004. Our certificate, with number EMS 531083, is issued by the internationally recognized BSI, British Standards Institution, of England.

### Quality

For us, quality means trying all the time to be the best in the business. That's why we are constantly developing our products, methods and ourselves, since knowledge is perhaps the most important component for achieving the highest quality. Our work on quality has resulted in Elpress being certified to ISO 9001 since 1992. Our certificate, with number FM20987, is issued by the internationally recognized BSI, British Standards Institution, of England.

### **Verification of products**

There are quite a lot of different test standards and approval routines that may be applied on cable connectors and terminations. Due to this and the variation in contents between standards from different countries one has to make a selection. Elpress had previously applied primarily Swedish, UK and German standards but lately IEC and EN Standards, where the latter rapidly will substitute the old national standards. In many cases, there are also UL, DNV-Det Norske Veritas or other approvals on our products.

IEC - International Electrical Commission - issues international standards which, although not always compulsory, do have strong influence and are used as a basis within the international terminal trade.

#### **DNV - Det Norske Veritas**

Elpress KR/KS, KRF/KSF and KRT/KST terminals meet DNV's rules for classification of ships and Det Norske Veritas' Offshore Standards. The terminals are approved for installations on ships and mobile "offshore" units.

UL is an American standard which is also internationally accepted. KR/KS, KRF/KSF, KRFS, KRFN, KRT/KST UL approved in accordance with file no. E205350.

### Pre-insulated 0.1 - 6 mm<sup>2</sup> terminals with associated tools

General information about pre-insulated terminals	2
Hand tools for pre-insulated terminals	.3
Ring terminals 0.1 - 6 mm²	4
Fork terminals 0.1 - 6 mm²	5
Flanged fork terminals 0.5 - 2.5 mm²	5
Hook terminals 0.5 - 2.5 mm²	6

Elpress Mobile, Mobile Installation & Mobile DataCom	20
Mobile Solar Kit and Mobile Box	21
Additional dies for Elpress Mohile	วว

### General information about pre-insulated terminals

### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection will be achieved through the proper handling of our products.

#### **Pre-insulated terminals**

Elpress ring, fork and pin terminals are made of high-class copper 99.95%. The tab and bullet terminals are made of brass or tin-bronze. All terminals are then electrolytically tin-plated for maximum corrosion protection. The terminal's neck is brazed and annealed, which means it can be crimped in any direction. The metal in the receptacles' neck is double folded. This means that the finished terminal has excellent mechanical strength and low resistance.

#### Insulation material

Elpress insulation sleeves are usually made from halogen-free polycarbonate, PC, which has excellent deformation properties. Furthermore, it maintains its vibration support up to high temperatures. Caution must be exercised in case of alkaline exposure. Some types of terminals have insulation of PA, nylon, which is also halogen-free, or PVC (not halogen free. The colour of the insulation sleeve indicates the cross-sectional area that the terminal is intended for:

Bright yellow sleeve	0.1 - 0.5 mm <sup>2</sup>
Green sleeve*	0.25 - 0.75 mm
Red sleeve	0.5 - 1.5 mm²
Blue sleeve	1.5 - 2.5 mm²
Yellow sleeve	4-6 mm²

\* or transparent white

The table below shows properties for Elpress pre-insulated terminals insulation. Note the properties are general since the influences of environment, temperature, etc. can affect the terminals. Polycarbonate, PC, and polyamide, PA, are halogen-free, i.e. they do not contain any of the substances fluoride, chlorine, bromide or iodine.

Insulation material	Max. tem- perature	Halogen -free	Flammability class, UL94
PA (Polya- mide)	105°	Yes	V0
PC (Poly- carbonate)	115°	Yes	V2
PVC (Polyvinyl chloride)	60°	No, chlorine	V0

### Easy-entry

Elpress insulation sleeves are usually of the easy-entry type, which means it guides the conductor strands properly into the terminal neck. The risk of back-folded and stray strands, possibly resulting in flash-overs or reduced electrical properties, is therefore eliminated.

Easy-entry.

# Labelling of pre-insulated terminals

Elpress pre-insulated terminals are labelled with logo, cross sectional area and any applicable screw diameter to facilitate work and controllability. When contact crimping pre-insulated terminals, Elpress crimping dies/tools leave an imprint in the insulation sleeve so that all crimped terminals can be inspected retrospectively in accordance with the requirements of many standards.

Samples of Elpress crimped preinsulated terminals.

#### Designation example

#### Cat no. A1532R (E, FLS, G etc.)

A = pre-insulated

15 = cross sectional area (1.5 mm2)

32 = characteristic size (Hole 3.2 mm)

E = end connectors

FLS = receptacles, rolled type

FLSF = receptacles, fully insulated rolled type

FLSH = multiple tabs, rolled type (piggy back) FLST = receptacles, rolled type, tin-bronze

G = fork terminals

GB = flanged fork terminals

H = tabs (male)

HA = bullets (male)

HO = sockets (female)

K = hook terminals

PSK = parallel connectors

R = ring terminals

SF = blade terminals

SFB = blade terminals, flanged

SFK = blade terminals, short pin

SFL = blade terminals, long pin

SFN = blade terminals, with tab

SR = pin terminals

SRK = pin terminals, short pin

SK = through connectors

SKW = through connectors with heat shrink insulation

Crimping of Elpress pre-insulated ring terminal with hand tool GSA0760.

### Hand tools for pre-insulated terminals

#### Mechanical tools

In the development of a mechanical crimping tool at Elpress, we strive for the best quality and ergonomics in the actual tool, and the best characteristics in the crimped terminal. The tools have a built-in locking system (not the hobby tools) that ensures that the entire crimping process is completed - a prerequisite for professional and quality-assured work.

Elpress Mobile, professional tool with interchangeable dies for the installer or service technician.

#### Miniforce-tools

With the unique Miniforce tools, a new level has been established regarding ergonomic adaptation to the user and low force requirements. This has resulted in a decrease in the grip forces by up to 45% and is the result of an advanced development process where minimisation of the risks of work-related injuries and the best ergonomics have been the deciding factors.

Miniforce type C has longer handles to facilitate two-handed operation, which is often a simple and natural way to reduce the loads. Electrical crimping tools and terminals together constitute a contact crimping system where crimping results are continuously checked against the requirements of established standards such as IEC 60352-2, SEN 245010, DIN 46429, IEC 61238-1 etc. Many of the manual tools have symmetrical crimp positions that make it possible to work from both sides - something that is important for left-handed users. The tools in the Miniforce, D and 50 series are made of very high-grade hardened steel with a black oxide finish and are laser marked.

### Certification of crimping tools

For quality assurance of our tools, we certify the manufacture of our crimping tools, both hand tools, type Gxx, i.e. Miniforce tools, and type Dxx.

#### What do we certify?

Certification of the crimping tools means that each individual tool is documented at the final assembly and inspection stage with respect to:

- handle pre-load, which is the force needed to ensure that the lock, which prevents a crimp from being interrupted. is not released too early.
- crimp die nest heights, i.e. the maximum height measurements which can be measured in each indentation with the dies pressed together.

#### Why certification?

The certificate that accompanies the tool serves several functions:

- crimping tools are often directly introduced upon procurement in a quality management system. The tool's status at procurement shall of course be the first thing noted, to then be followed by regular checks where potential changes can be discovered and addressed.
- the certificate shows that each individual tool meets the requirements of the tool's basic specifications.
- the certificate states what the most important characteristics are that shall be followed up.

Elpress' service department offers the possibility of continued follow-up of the quality of the tools.

Certificate that accompanies the tool.

Get your certificate.

Elpress ergonomic Miniforce tool.

# Ring terminals 0.1 - 6 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn, brazed neck.
- PC insulation has easy-entry, PC and PA are halogen-free.

### Assortment boxes - pre-insulated terminals

### $\epsilon$ **RPL605**

RPL605 is a complete assortment box for professional work, containing terminals and tools.

#### **Properties:**

- certified crimping tool GSA0760, crimp area 0.5-6 mm²
- stripping tool SCT001, cuts and strips 0.5-6 mm<sup>2</sup>
- 605 x Elpress pre-insulated 0.5-6 mm² terminals

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height	
0,5-6	20-10	RPL605	2,05	261	338	57	

- box made of ABS plastic, inserts made of polystyrene
- 29 compartments
- 997 pre-insulated 0.5-6 mm² terminals
- 4 connection blocks
- crimping tool GSA0760 Miniforce
- stripping tool SCT001

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height	
0,5-6	20-10	PL1001	2,94	380	285	55	

#### $\epsilon$ **PL451M**

Elpress assortment box for professional use.

### **Properties:**

- box made of polypropylene, insert made of polystyrene
- 11 compartments
- 346 pre-insulated 0.5-6 mm² terminals
- 3 connection blocks
- crimping tool GSA0760 Miniforce
- stripping tool SCT001

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,5-6	20-10	PL451M	1,275	245,5	215	56,5

**All Enquiries:** 

### **PL450**

Elpress assortment box designed for hobby use.

#### **Properties:**

- box made of polypropylene, insert made of polystyrene
- 11 compartments
- 346 pre-insulated 0.5-6 mm² terminals
- 3 connection blocks
- crimping tool hobby T50, which contact crimps, cuts and strips up to and including 6 mm² and cuts M2.5-M5 screws

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,5-6	20-10	PL450	1,019	245,5	215	56,5

### **HB150**

Elpress assortment box designed for hobby use.

#### **Properties:**

- box made of polypropylene, insert made of polystyrene
- 11 compartments
- 147 pre-insulated 0.5 6 mm² terminals
- 2 connection blocks
- crimping tool hobby T50, which contact crimps, cuts and strips up to and including 6 mm² and cuts M2.5-M5 screws

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,5-6	20-10	HB150	0,781	245,5	215	56,5

# Hobby tools for pre-insulated and uninsulated 0.5 - 6 mm<sup>2</sup> terminals as well as cutting and stripping

#### **Properties:**

- made of high-grade steel with semi-soft handles
- crimping positions are clearly marked
- the tools do not have a locking function
- cuts up to and including 6 mm<sup>2</sup>
- strips up to and including 6 mm<sup>2</sup>
- cuts screws M2.5-M5

### T50 Hobby tool

#### **Special properties:**

- contact crimps pre-insulated 0.5 6 mm² terminals and tab crimps uninsulated
   1.5 6 mm² terminals
- red handle

Crimp geometries

mm²	AWG	Name	Crimp geometries	Net weight (kg)	Length mm
0,5-6	20-10	T50	Tab, Oval	0,268	225

### T51 Hobby tool

#### Special properties:

- contact crimps pre-insulated 0.5 6 mm² terminals and roll crimps uninsulated 0.5 - 2.5 mm² terminals
- yellow handle

Crimp geometries

mm²	AWG	Name	Crimp geometries	Net weight (kg)	Length mm
0,5-6	20-10	T51	Oval, Roll	0,268	225

### T52 Hobby tool

#### **Special properties:**

- roll crimps uninsulated 0.5 6 mm² terminals
- green handle

Crimp geometry

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm
0,5-6	20-10	T52	Roll	0,268	225

# Tools for pre-insulated 0.14 - 2.5 mm<sup>2</sup> terminals with measuring certificates

#### **Properties:**

- crimping positions are clearly marked
- adjustable for changes after long use
- tested with Elpress terminals
- locking function that ensures a complete crimp
- emergency release if the crimping process has to be interrupted
- unique design that makes the tools thin and versatile
- minimal muscle strength required for complete crimp
- suitable for both right and left-handed users
- withstands at least 50,000 crimps

supplied with certificate for basic quality monitoring

### **DSA0115**

Tested and certified mechanical hand tool for symmetrical crimping of pre-insulated terminals 0.14-1.5 mm².

easy to check red die nests easily with die nest gauge, ESAQ0760

### **DSA0725**

#### Special properties:

• die nests are easily checked with die nest gauge, ESAQ0760

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,5-2,5	20-14	DSA0725			192	66

### ESAQ0760 - die nest gauge

Go/no-go gauge for inspection of die nests in the following tools: DSA0115, DSA0725, GSA0760(C), GSEA0340C.

#### Special properties:

- handle part Ø 8 mm
- easy to check tool die nest
- The go and no go dimensions are checked in the die nests upon calibration. Contact Elpress for more information on calibration and quality management

mm² AWG	Name	Net weight (kg)	Shaft ø	Length mm
0,5-2,5 20-14	ESAQ0760	0,024	8	55
Tool	Die nests			
DSA0115				
DSA0725				
GSA0760(C)				
GSEA0340(C)				

**All Enquiries:** 

# Miniforce tools for pre-insulated 0.5 - 6 mm<sup>2</sup> terminals and 0.25 - 4 mm<sup>2</sup> end casings with measuring certificates

#### **Properties:**

- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- symmetrical and clearly marked crimping positions
- adjustable for changes after long use
- tested with Elpress terminals
- unique mechanism that reduces maximum handle force from 450 N right down to 250 N (model C)
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- light and versatile design without sacrificing on strength
- model C has extra long handles for the use of two hands
- withstands at least 80,000 crimps
- supplied with certificate for basic quality monitoring

## **C** € GSEA0340C

Tested and certified mechanical Miniforce hand tool for crimping pre-insulated terminals 0.5-2.5 mm<sup>2</sup> as well as pre-insulated and uninsulated end sleeves 0.25-4 mm<sup>2</sup>.

mm²	AWG	Name	Crimp geometries	Net weight (kg)	Length mm	Width	
0,5-2,5 /	20-14/			0,613	256	80	
0.25-4	22-12						

Crimp geometries

### **GSW0560C**

Tested and certified mechanical Miniforce hand tool for crimping 0.5-6 mm<sup>2</sup> through connectors with heat shrink insulation of the SKW type.

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,5-6	20-10	GSW0560C	Oval	0,612	256	80

Crimp geometry

### **GSA0760 and GSA0760C**

Tested and certified mechanical Miniforce hand tools for symmetrical crimping of pre-insulated terminals 0.5-6 mm².

- locator that holds the terminal in the right position when crimping and facilitates work in, for example, tight spaces
- die nests are easily checked with die nest gauge, ESAQ0760

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length	Width
0,5-6	20-10	GSA0760		0,548	203	76
0,5-6	20-10	GSA0760C	Oval	0,607	256	80

Follow procedures (1) and (2) when attaching the terminal in the locator on tool GSA0760(C).

### Crimp geometry

## Battery-powered crimping tools for pre-insulated 0.5 - 6 mm² terminals, uninsulated 0.25 - 10 mm² terminals and 0.5 - 50 mm<sup>2</sup> end sleeves

#### **Properties:**

- Li-ion battery powered (10.8 V and 2 Ah), charging time about 40 min
- very good accessibility and ergonomics
- service and installation tools
- fast crimping process 2 4 sec
- · approximately 230 crimps/battery charge
- dies for the tool sold separately

# CE PVL130P - Elpress Mini

PVL130P - Elpress MINI, dies sold separately.

PVL130P, case and charger.

Elpress mini tool with a sleek design with a high performance Li-lon battery that facilitates your work with its improved battery capacity. Crimping force max. 13 kN. 1 x Li-ion battery and charger included.

#### **Properties:**

- one-handed operation for easy control of all tool functions
- durable crimping head for long service life
- optimal crimping thanks to parallel-moving dies
- easy to use due to its low weight
- high-performance 10.8 V Li-lon battery with indication of charge status
- · open head, rotating
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- automatic return of dies when crimping is complete

mm² (Cu)	AWG (Cu)	Name	Net weight (kg)	Length mm	Width	Height	Note

0,25-50	24-1/0	PVL130P-WOBC	0,91	330	85	60	without Battery/ Charger

# PVL130S - Elpress Mini

Elpress mini tools with intuitive PowerSense function combine the benefits of manual crimping tools with the benefits of battery-powered hydraulic crimping

Crimping force max. 15 kN. 1 x Li-ion battery and charger included.

PVL130S - Elpress MINI, supplied with die pair SA0760.

#### **Properties:**

- one-handed operation for easy control of all tool functions
- electronic control with locking function and monitoring for complete closure of
- safety loop used as fall protection when used outdoors
- motor protection ensures safety in case of overload
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- very low weight and fast crimping process for maximum efficiency
- powerful driving technology allows for easy crimps
- high-performance 10.8 V Li-Ion battery with indication of charge status
- LED work lighting
- Die pair SA0760 comes with the tool

mm² (Cu)	AWG (Cu)	Name	Net weight (kg)	Length mm	Width	Height	Note

### Dies for PVL130P/PVL130S

EB0560

EB4010

EB3550

### Elpress Mobile - tool with interchangeable dies

Professional contact crimping tool with interchangeable dies for the installer or service technician.

#### **Properties:**

- reliable, safe, economic and ergonomic tools
- parallel-moving crimping movement with 10 kN crimping force, tested for 20,000 crimps
- change crimping dies quickly and easily in one operation
- the crimping dies are kept together in pairs and stored in custom holders
- wide selection of dies allows you to use one tool frame for 19 different crimping applications!

### **Elpress Mobile**

Mobile hand tool (frame only). Dies are supplementary.

mm²	AWG	Name	Net weight (kg)	Length mm	Width	
0,25-10	24-8	MOBILE	0,554	234	64	_

Elpress Mobile + dies OAA0525 and OEB0210.

### **Mobile Installation**

Mobile hand tool with two interchangeable dies:

- Die OAA0525 for crimping pre-insulated 0.5 2.5 mm² terminals.
- Die OEB0210 for crimping end sleeves 0.25 10 mm².
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width	
MOBILE INSTALLATION	0,695	234	64	_

Elpress Mobile + dies OMP45 and OCC1113.

### Mobile DataCom

Mobile hand tool with two interchangeable dies:

- OMP45 for crimping modular plug RJ45.
- OCC1113 for crimping coaxial contacts RG58, RG59, RG62 and RG71.
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width
MOBILE DATA/COM	0,667	234	64

Elpress Mobile + dies OMS4, OMS3 and OMSL.

Cable stripper LOKE.

### Mobile Solar Kit

Mobile hand tool with three interchangeable dies and cable stripper LOKE for stripping solar panel cable with extra thick insulation:

- OMS4, roll crimping of contacts with sleeve Ø 4 mm, 2.5 6.0 mm<sup>2</sup>.
- OMS3, square crimping of contacts with sleeve Ø 3 mm, 2.5 6.0 mm<sup>2</sup>.
- OMSL, square crimping of contacts, 2.5 6.0 mm<sup>2</sup>.

Name	Net weight (kg)	Length mm	Width
MOBILE SOLAR	0,772	234	64

### **Mobile Box**

Box for the mobile tool with room for the tool as well as 5-6 associated dies. Tools and dies are ordered separately.

Name	Net weight (kg)	Length mm	Width	Height
MOBILE BOX	0.32	246	218	57

### Additional dies for Elpress Mobile

All dies have the same quick and easy way of being inserted into the tool frame. The dies are kept together in pairs and supplied in a cassette that can be docked to other cassettes.

**OAA0160** Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.1-4 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9

OAA0525 Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.5-2.5 mm<sup>2</sup>. AWG 20-13.

OSW0360 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.3-0.75 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9.

OSW0525 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.5-1.5 mm<sup>2</sup> and 1.5-2.5 mm<sup>2</sup>. AWG 15-13.

**OPB0140** Crimping die for Elpress MOBILE tool for crimping global power connectors, GPC connectors.

**OPB6099** Crimping die for Elpress MOBILE tool for crimping global power connectors, . GPC connectors.

OWB4099 Crimping die for Elpress MOBILE tool for W crimping of uninsulated terminals 4-10 mm<sup>2</sup>. AWG 11-7.

OKB0725 Crimping die for Elpress MOBILE tool for punch crimping uninsulated terminals 0.75-2.5 mm<sup>2</sup>. AWG 18-13.

OKB0560 Crimping die for Elpress MOBILE tool for punch crimping uninsulated terminals 0.5-6 mm<sup>2</sup>. AWG 20-9.

OEB0210 Crimping die for Elpress MOBILE tool for crimping end sleeves 0.25-10 mm<sup>2</sup>. AWG 24-7.

**OEB1625** Crimping die for Elpress MOBILE tool for crimping end sleeves 16-25  $mm^2$ AWG 5-3.

OEB3550 Crimping die for Elpress MOBILE tool for crimping end sleeves 35-50  $mm^2$ AWG 2-1/0.

OMP11 Crimping die for Elpress MOBILE tool for crimping modular plug RJ11.

ORB0110 Crimping die for Elpress MOBILE tool for roll crimping uninsulated terminals 0.1-1 mm<sup>2</sup>. AWG 26-17.

ORB0560 Crimping die for Elpress MOBILE tool for roll crimping uninsulated terminals 0.5-6 mm<sup>2</sup>. AWG 20-9.

OMP45 Crimping die for Elpress MOBILE tool for crimping modular plug RJ45.

OFO5432 Crimping die for Elpress MOBILE tool for crimping fibre optic contacts.

OCC0908 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG174, 179.

OCC1113 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG58, 59, 62, 71.

OCC4755 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG6, 59.

OMS4 Dies for Mobile tools for roll crimping contacts with sleeve diameter 4 mm, 2.5-6.0 mm<sup>2</sup>. AWG 13-19.

OMSL Die for square crimping contacts 2.5-6.0 mm<sup>2</sup>. AWG 13-9.

### General information about end terminals

With Elpress end terminals you avoid splayed conductors and reduce the risk of cable breaks. Moreover, they create a lasting contact pressure and a large contact area.

Crimped End terminal.

### **System Elpress**

System Elpress consists of terminals and tools that are adapted and tested together for best performance. This ensures that users will feel confident when using our systems, and that a secure terminal is achieved through the proper handling of our products. Using an Elpress crimping tool when crimping an Elpress end terminal means that a terminal is obtained according to DIN 57609.

#### **End sleeves**

Elpress pre-insulated and uninsulated end terminals are made of 99.95% copper and are tin plated. The end terminals have dimensions according to DIN 46228 with a few exceptions (see note in tables). The insulation boot is made of PP (polypropylene) and has a shape comparable to easy-entry, see image. Elpress end terminals are used when you need a perfect connection for the cable end.

### Designation example

Cat. no. A4-12ET

A = pre-insulated

B = uninsulated

4 = area (4 mm<sup>2</sup>)

12 = Length metal sleeve

ET = end terminal ET2 = TWIN end terminal

#### **CSA** certification

CSA, Canadian Standards Association, is a Canadian organisation that certifies products according to US standards. Elpress end sleeves of type A..ET / ETT / ETD, B. .. ET, A...ET2/ETT2/ETW2 is CSA certified according to US standard C22.2 No 158 and UL 1059 according to file No. 247206. End terminals of the type A..ET/B...ET/A...ET2 are intended for stranded Cu-conductors 26 AWG to 500 MCM, equivalent to the metric sizes 0.14 mm² to 240 mm². To be used together with Elpress crimping tool.

Crimped TWIN end terminal.

300	150	yellow		yellow	yellow

### Hand tools for end terminals

#### Mechanical tools

In the development of a mechanical crimping tool at Elpress, we strive for the best quality and ergonomics in the actual tool, and the best characteristics in the crimped terminal. The tools have a built-in locking system (not the hobby tools) that ensures that the entire crimping process is completed - a prerequisite for professional and quality-assured work.

Elpress Mobile, professional tool with interchangeable dies for the installer or service technician.

#### Miniforce-tools

With the unique Miniforce tools, a new level has been established regarding ergonomic adaptation to the user and low force requirements. This has resulted in a decrease in the grip forces by up to 45% and is the result of an advanced development process where minimisation of the risks of work-related injuries and the best ergonomics have been the deciding factors.

Miniforce type C has longer handles to facilitate two-handed operation, which is often a simple and natural way to reduce the loads. Electrical crimping tools and terminals together constitute a contact crimping system where crimping results are continuously checked against the requirements of established standards such as IEC 60352-2, SEN 245010, DIN 46429, IEC 61238-1 etc. Many of the manual tools have symmetrical crimp positions that make it possible to work from both sides - something that is important for left-handed users. The tools in the Miniforce, D and 50 series are made of very high-grade hardened steel with a black oxide finish and are laser marked.

### Certification of crimping tools

For quality assurance of our tools, we already certify the manufacture of our crimping tools, both hand tools, type Gxx, i.e. Miniforce tools, and type Dxx.

#### What do we certify?

Certification of the crimping tools means that each individual tool is documented at the final assembly and inspection stage with respect to:

- handle pre-load, which is the force needed to ensure that the lock, which prevents a crimp from being interrupted, is not released too early.
- · crimp die nest heights, i.e. the maximum height measurements which can be measured in each indentation with the dies pressed together.

#### Why certification?

The certificate that accompanies the tool serves several functions:

- crimping tools are often directly introduced upon procurement in a quality management system. The tool's status at procurement shall of course be the first thing noted, to then be followed by regular checks where potential changes can be discovered and addressed.
- the certificate shows that each individual tool meets the requirements of the tool's basic specifications.
- the certificate states what the most important characteristics are that shall be followed up.

Elpress' service department offers the possibility of continued follow-up of the quality of the tools.

Certificate that accompanies the tool.

Get your certificate.

Use the tool socket closest to the total area of the terminal.

### Assortment boxes - end terminals

### **PL800ET with tools**

Elpress assortment boxes for professional use.

#### **Properties:**

- made of polypropylene, insert made of polystyrene
- 11 compartments
- 800 pre-insulated end sleeves 0.5-16 mm² type ET, colour code W
- stripping tool SCT001

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,5-16	20-6	PL800ET-PEB0116H	0,993	245,5	215,0	56,5
0,5-16	20-6	PL800ET-PEB0116S	0,9885	245,5	215,0	56,5

CE

#### **RPL5548**

RPL5548 is a complete assortment box for electricians who like to keep things neat and tidy. A system solution for stroring high quality tools and end sleeves that are used daily.

#### **Properties:**

- practical and safe design for stacking. Comes with removable inserts, perfect for easy refilling of terminals.
- $\bullet$  the box contains 1550 end terminals 0.14-10 mm², the PEB0110T crimping tool and the CT10 stripping tool.

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,14-10	26-8	RPL5548	1,46	261	338	57

#### **SD4016**

Elpress hanging assortment box.

#### **Properties:**

- made of plastic
- 5 compartments
- 100 pre-insulated end sleeves 4 16 mm² type ET, colour code W

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
4-16	12-6	SD4016	0,104	165,0	58,0	38,0

#### SD0525

Elpress hanging assortment box.

#### Properties:

- made of plastic
- 5 compartments
- 400 pre-insulated end sleeves 0.5 2.5 mm² type ET, colour code W

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height	
0 5-2 5	20-14	SD0525	0.106	165.0	58.0	38.0	

# Miniforce tool for end terminals 0.14 - 16 mm<sup>2</sup> with measuring certificate

- small and compact, ideal for confined spaces
- locking function which only releases once crimping is complete
- well balanced so the tool does not slip out of your hand
- high friction grip allows the tool to be used with a table as support
- custom hole to attach a safety line
- ergonomically designed handle made of grip friendly material
- minimum handle force required when crimping larger areas
- emergency release if the crimping process has to be interrupted
- tested with Elpress terminals
- supplied with certificate for basic quality monitoring

#### **PEB0116S**

Tested and certified mechanical Miniforce hand tool for crimping end terminals 0.14-16 mm<sup>2</sup> with square crimping.

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length	Width
0,14-16,0	26-6	PEB0116S	Square	0,371	176	62

#### **PEB0116H**

Tested and certified mechanical Miniforce hand tool for crimping end terminals 0.14-16 mm<sup>2</sup> with hexagonal crimping.

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length	Width
0,14-16,0	26-6	PEB0116H	Hexagonal	0,379	176	62

Crimp geometry

### **PEB0110T and PEB0110T18**

Tested and certified mechanical Miniforce hand tools for crimping end terminals 0.14-10 mm².

#### Special properties:

- Rotating die
- Front and side feed

mm²	AWG/ MCM (Cu)	Name	Crimp geometry	Net weight (kg)	Length	Width
0,14-10	26-8	PEB0110T	Trapezoid	0,385	180	65
0,14-10	26-8	PEB0110T18	Trapezoid	0,300	180	25

Crimp geometry

## Miniforce-tool for end terminals 0.25 - 4 mm<sup>2</sup> with measurement certificates

#### **Properties:**

- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- symmetrical and clearly marked crimping positions
- adjustable for changes after long use
- tested with Elpress terminals
- unique mechanism that reduces maximum handle force from 450 N right down to 250 N (model C)
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- light and versatile design without sacrificing on strength
- model C has extra long handles for the use of both hands
- withstands at least 80,000 crimps
- supplied with certificate for basic quality monitoring

#### GSEA0340C

Tested and certified mechanical Miniforce hand tool for crimping pre-insulated terminals 0.5-2.5 mm<sup>2</sup> as well as pre-insulated and uninsulated end sleeves 0.25-4 mm<sup>2</sup>.

mm²	AWG	Name	Crimp geometries	Net weight (kg)	Length mm	Width
0,5-2,5 /	20-14/	GSEA0340C	Oval, Trapezoid	0,613	256	80
0.25-4	22-12					

# Miniforce tool for end terminals 0.1 - 6 mm<sup>2</sup> and TWIN end terminals 2 x 0.5 - 2 x 10 mm<sup>2</sup>

#### **Properties**

- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- clearly marked crimping positions
- adjustable in case of changes due to long-term use
- tested with Elpress terminals
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- light and versatile design without compromising durability
- model C has extra long handles for the use of both hands
- withstands at least 80,000 crimps
- supplied with certificate for basic quality monitoring

### **GEB4010C-TWIN**

Tested and certified mechanical Miniforce hand tool for crimping pre-insulated TWIN end terminals  $2 \times 4-2 \times 10 \text{ mm}^2$ .

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
4-10	12-8	GEB4010C-TWIN	Trapezoid	0,618	256	80

#### PZD3

Tested and certified mechanical hand tool for crimping end terminals  $0.5-6 \text{ mm}^2$  and insulated TWIN end terminals  $2 \times 0.5-2 \times 4 \text{ mm}^2$ .

#### Special properties:

- a crimp mode that automatically adjusts itself
- front-fed
- can handle crimp lengths up to 17 mm

### Battery-powered crimping tools for pre-insulated 0.5 - 6 mm² terminals, uninsulated 0.25 - 10 mm² terminals and 0.5 - 50 mm<sup>2</sup> end sleeves

#### **Properties:**

- Li-ion battery powered (10.8 V and 2 Ah), charging time about 40 min
- very good accessibility and ergonomics
- service and installation tools
- fast crimping process 2 4 sec
- · approximately 230 crimps/battery charge
- dies for the tool sold separately

## **C** € PVL130P - Elpress Mini

#### **Properties:**

- · one-handed operation for easy control of all tool functions
- durable crimping head for long service life
- optimal crimping thanks to parallel-moving dies
- easy to use due to its low weight
- high-performance 10.8 V Li-Ion battery with indication of charge status
- · open head, rotating
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- · automatic return of dies when crimping is complete

mm² (Cu)	AWG (Cu)	Name	Net weight (kg)	Length	Width	Height	Note

### PVL130S - Elpress Mini

Elpress mini tools with intuitive PowerSense function combine the benefits of manual crimping tools with the benefits of battery-powered hydraulic crimping

Crimping force max. 15 kN. 1 x Li-ion battery and charger included.

- one-handed operation for easy control of all tool functions
- electronic control with locking function and monitoring for complete closure of
- safety loop used as fall protection when used outdoors
- motor protection ensures safety in case of overload
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- very low weight and fast crimping process for maximum efficiency
- powerful driving technology allows for easy crimps
- high-performance 10.8 V Li-Ion battery with indication of charge status
- LED work lighting
- Die pair SA0760 comes with the tool

mm² (Cu)	AWG (Cu)	Name	Net weight (kg)	Length	Width	Height	Note

### Elpress Mobile - tool with interchangeable dies

Professional contact crimping tool with interchangeable dies for the installer or service technician.

#### **Properties:**

- reliable, safe, economic and ergonomic tools
- parallel-moving crimping movement with 10 kN crimping force, tested for 20,000 crimps
- change crimping dies quickly and easily in one operation
- the crimping dies are kept together in pairs and stored in custom holders
- wide selection of dies allows you to use one tool frame for 19 different crimping applications!

### **Elpress Mobile**

Mobile hand tool (frame only). Dies are supplementary.

mm²	AWG	Name	Net weight (kg)	Length mm	Width	
0,25-10	24-8	MOBILE	0,554	234	64	_

Elpress Mobile + dies OAA0525 and OEB0210.

### **Mobile Installation**

Mobile hand tool with two interchangeable dies:

- Die OAA0525 for crimping pre-insulated 0.5 2.5 mm² terminals.
- Die OEB0210 for crimping end sleeves 0.25 10 mm².
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width	
MOBILE INSTALLATION	0,695	234	64	_

Elpress Mobile + dies OMP45 and OCC1113.

### Mobile DataCom

Mobile hand tool with two interchangeable dies:

- OMP45 for crimping modular plug RJ45.
- OCC1113 for crimping coaxial contacts RG58, RG59, RG62 and RG71.
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width
MOBILE DATA/COM	0,667	234	64

### **Mobile Box**

Box for the mobile tool with room for the tool as well as 5-6 associated dies. Tools and dies are ordered separately.

Name	Net weight (kg)	Length mm	Width	Height	
MOBILE BOX	0,32	246	218	57	

### Additional dies for Elpress Mobile

All dies have the same quick and easy way of being inserted into the tool frame. The dies are kept together in pairs and supplied in a cassette that can be docked to other cassettes.

**OAA0160** Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.1-4 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9

OAA0525 Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.5-2.5 mm<sup>2</sup>. AWG 20-13.

OSW0360 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.3-0.75 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9.

OSW0525 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.5-1.5 mm<sup>2</sup> and 1.5-2.5 mm<sup>2</sup>. AWG 15-13.

**OPB0140** Crimping die for Elpress MOBILE tool for crimping global power connectors, GPC connectors.

**OPB6099** Crimping die for Elpress MOBILE tool for crimping global power connectors, . GPC connectors.

OWB4099 Crimping die for Elpress MOBILE tool for W crimping of uninsulated terminals 4-10 mm<sup>2</sup>. AWG 11-7.

OKB0725 Crimping die for Elpress MOBILE tool for punch crimping uninsulated terminals 0.75-2.5 mm<sup>2</sup>. AWG 18-13.

OKB0560 Crimping die for Elpress MOBILE tool for punch crimping uninsulated terminals 0.5-6 mm<sup>2</sup>. AWG 20-9.

**OEB0210** Crimping die for Elpress MOBILE tool for crimping end sleeves 0.25-10 mm<sup>2</sup>. AWG 24-7.

**OEB1625** Crimping die for Elpress MOBILE tool for crimping end sleeves 16-25  $mm^2$ AWG 5-3.

OEB3550 Crimping die for Elpress MOBILE tool for crimping end sleeves 35-50  $mm^2$ AWG 2-1/0.

OMP11 Elpress MOBILE modular plug RJ11.

ORB0110 Crimping die for Elpress MOBILE tool for roll crimping uninsulated terminals 0.1-1 mm<sup>2</sup>. AWG 26-17.

ORB0560 Crimping die for Elpress MOBILE tool for roll crimping uninsulated terminals 0.5-6 mm<sup>2</sup>. AWG 20-9.

OMP45 Crimping die for Elpress MOBILE tool for crimping modular plug RJ45.

Crimping die for tool for crimping

OFO5432 Crimping die for Elpress MOBILE tool for crimping fibre optic contacts.

OCC0908 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG174, 179.

OCC1113 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG58, 59, 62, 71.

OCC4755 Crimping die for Elpress MOBILE tool for crimping coaxial contacts RG6, 59.

OMS4 Dies for Mobile tools for roll crimping contacts with sleeve diameter 4 mm, 2.5-6.0 mm<sup>2</sup>. AWG 13-19.

OMSL Die for square crimping contacts 2.5-6.0 mm<sup>2</sup>. AWG 13-9.

### General information about uninsulated terminals

#### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection will be achieved through the proper handling of our products.

#### **Uninsulated terminals**

Elpress through connectors, ring, pipe, fork and pin terminals are made of high-quality copper 99.95%. The receptacles and sockets are made of brass. All terminals are then electro-tin plated for maximum corrosion protection. Terminals made of copper bands have a brazed neck which is soldered, which means that it can be crimped in any direction.

Examples of crimps using Elpress uninsulated terminals

#### Marking of uninsulated terminals

Elpress uninsulated terminals are marked with logotype, area and any screw diameter to facilitate work and checkability.

#### Designation example

Cat no B1532R (G, HO, FLS etc)

B = uninsulated

15 = Area (1.5 mm<sup>2</sup>)

32 = Characteristic dimension (Hole 3.2 mm)

G = fork terminals

GS = fork terminal

H = tabs (male)

HN = tab with locking lip

HA = bullet

HO = socket

R = ring terminals

SR = pin terminal

FLS = receptacle, rolled type

FLSB = receptacle 90 rolled type

FLSH = receptacle w male rolled type

FLSN = receptacle w locking lip rolled model

FLSV = receptacle angled rolled model

#### Screw and washer

The following apply for bright galvanized type nuts and screws, with strength class 8.8, used for connecting terminals with Cu and Al palms:

- Always use a torque wrench to be certain the right torque is achieved. Make sure it is calibrated at regular intervals according to the supplier's instructions.
- Use the recommended torque according to the screw manufacturer's instructions.
- Always use a hard flat washer to reduce friction against the connection surface and the edge pressure, hardness min HB200.
- Install as illustrated.

#### **IEC** recommendations

IEC - The International Electrical Commission - publishes internationally viable standards which, although not directly binding, often have great impact and are used as the basis for international deliveries. A technical report, IEC 61238-2, sets out the following recommendations regarding screw sizes for connecting terminals with Cu and Al plate provided that mounting takes place with a washer and with the correct tightening torque.

Conductor area, mm²	Screw	
10	M6	
16-50	M8	
70-95	M10	
120-300	M12	
400-500	M16	

#### **UL-approved terminals**

UL is a US standard that is also internationally accepted. Elpress standard Cu-terminals type KR/KS, KRF/KSF are UL approved acc. to file no. E205350.

3:2

#### Hand tools for uninsulated terminals

#### Mechanical tools

In the development of a mechanical crimping tool at Elpress, we strive for the best quality and ergonomics in the actual tool, and the best characteristics in the crimped terminal. The tools have a built-in locking system (not the hobby tools) that ensures that the entire crimping process is completed - a prerequisite for professional and quality-assured work.

Elpress Mobile, professional tool with interchangeable dies for the installer or service technician.

#### Miniforce-tools

With the unique Miniforce tools, a new level has been established regarding ergonomic adaptation to the user and low force requirements. This has meant a decrease in the grip forces by up to 45% and is the result of an advanced development process where minimisation of the risks of work-related injuries and the best ergonomics have been the deciding factors.

Miniforce type C has longer handles to facilitate two-handed operation, which is often a simple and natural way to reduce the loads. Electrical crimping tools and terminals together constitute a contact crimping system where crimping results are continuously checked against the requirements of established standards such as IEC 60352-2, SEN 245010, DIN 46429, IEC 61238-1 etc. Many of the manual tools have symmetrical crimp positions that make it possible to work from both sides - something that is important for left-handed users. The tools in the Miniforce, D and 50 series are made of very high-grade hardened steel with a black oxide finish and are laser marked.

#### Certification of crimping tools

For quality assurance of our tools, we already certify the manufacture of our crimping tools, both hand tools, type Gxx, i.e. Miniforce tools, and type Dxx.

#### What do we certify?

Certification of the crimping tools means that each individual tool is documented at the final assembly and inspection stage with respect to:

- handle pre-load, which is the force needed to ensure that the lock, which prevents a crimp from being interrupted, is not released too early.
- crimp die nest heights, i.e. the maximum height measurements which can be measured in each indentation with the dies pressed together.

#### Why certification?

The certificate that accompanies the tool serves several functions:

- crimping tools are often directly introduced upon procurement in a quality management system. The tool's status at procurement shall of course be the first thing noted, to then be followed by regular checks where potential changes can be discovered and addressed.
- the certificate shows that each individual tool meets the requirements of the tool's basic specifications.
- the certificate states what the most important characteristics are that shall be followed up.

Elpress' service department offers the possibility of continued follow-up of the quality of the tools.

Certificate that accompanies the tool.

Get your certificate.

Elpress ergonomic Miniforce tool.

### Tube terminal 0.75 - 10 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn.
- For multi-stranded (Class 5) and get-stranded (Class 2) Cu conductors.
- UL approved (1.5 -10 mm²).

### Connector block for bullets and sockets 0.2 - 1.5 mm<sup>2</sup>

- Used with sockets and bullets 0.2-1.5 mm<sup>2</sup>.
- Material polyamide transparent.
- Max voltage 250 V.
- Max current 20 A.
- Temperature range -20°C to +105°C.
- Tested against breakthrough for 1 min at 1500 V AC.

### Assortment box - uninsulated terminals

Assortment box designed for electricians in the field and for service workshops.

#### **Properties:**

- box made of LDPE/TP
- 19 compartments (+ 10 empty compartments)
- 700 uninsulated terminals and through connectors 0.75-10 mm²
- crimping tool DKB0325
- crimping tool GWB4099 Miniforce
- stripping tool SCT001

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height	
0,75-10	22-8	PL701	3,426	380	285	55	

# Hobby tools for pre-insulated and uninsulated 0.5 - 6 mm<sup>2</sup> terminals as well as cutting and stripping

#### **Properties:**

- made of high-grade steel with semi-soft handles
- crimping positions are clearly marked
- the tools do not have a locking function
- cuts up to and including 6 mm<sup>2</sup>
- strips up to and including 6 mm<sup>2</sup>
- cuts screws M2.5-M5

### T50 Hobby tool

#### Special properties:

- contact crimps pre-insulated 0.5 6 mm² terminals and tab crimps uninsulated
   1.5 6 mm² terminals
- red handle

Crimp geometries

### Tool for uninsulated terminals 0.15 - 6 mm<sup>2</sup> with measuring certificate

#### **Properties:**

- · crimp points are clearly marked
- adjustable for changes after long use
- tested with Elpress terminals according to requirements of SEN and DIN
- locking function that ensures a complete crimp
- emergency release if the crimping process has to be interrupted
- unique design that makes the tools thin and versatile
- minimal muscle strength required for complete crimp
- withstands at least 50,000 crimps
- supplied with certificate for basic quality monitoring

# Miniforce tool for uninsulated terminals 0.5 - 10 mm<sup>2</sup> with measuring certificate

- Properties:
- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- clearly marked crimping positions
- adjustable for changes after long use
- tested with Elpress terminals
- unique mechanism that reduces maximum handle force from 450 N right down to 250 N (model C)
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- · light and versatile design without sacrificing on strength
- model C has extra long handles for the use of two hands
- withstands at least 80,000 crimps

supplied with certificate for basic quality monitoring

#### GRB0560L and GRB0560LC

Tested and certified mechanical Miniforce hand tool for roll crimping uninsulated terminals 0.5-6 mm². The tool is type L equipped with three interchangeable locators for different types of terminals (see table). Type LC has long handles.

- delivered in practical plastic box
- locator that holds the terminal in the correct position when crimping and gives you an "extra hand" that facilitates work in, for example, confined spaces

### Battery-powered crimping tools for pre-insulated 0.5 - 6 mm² terminals, uninsulated 0.25 - 10 mm² terminals and 0.5 - 50 mm<sup>2</sup> end sleeves

#### **Properties:**

- Li-ion battery powered (10.8 V and 2 Ah), charging time about 40 min
- very good accessibility and ergonomics
- service and installation tools
- fast crimping process 2 4 sec
- · approximately 230 crimps/battery charge
- dies for the tool sold separately

## CE PVL130P - Elpress Mini

- one-handed operation for easy control of all tool functions
- durable crimping head for long service life
- optimal crimping thanks to parallel-moving dies
- easy to use due to its low weight
- high-performance 10.8 V Li-Ion battery with indication of charge status
- · open head, rotating
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- automatic return of dies when crimping is complete

PVL130P - Elpress MINI, dies sold separately.

PVL130P, case and charger.

# PVL130S - Elpress Mini

Elpress mini tools with intuitive PowerSense function combine the benefits of manual crimping tools with the benefits of battery-powered hydraulic crimping

Crimping force max. 15 kN. 1 x Li-ion battery and charger included.

- one-handed operation for easy control of all tool functions
- electronic control with locking function and monitoring for complete closure of
- safety loop used as fall protection when used outdoors
- motor protection ensures safety in case of overload
- easy and comfortable to use one handed thanks to its ergonomic 2-component housing with grip-friendly protection
- very low weight and fast crimping process for maximum efficiency
- powerful driving technology allows for easy crimps
- high-performance 10.8 V Li-Ion battery with indication of charge status
- LED work lighting
- Die pair SA0760 comes with the tool

mm² (Cu)	AWG (Cu)	Name	Net weight (kg)	Length	Width	Height	Note

## Elpress Mobile - tool with interchangeable dies

Professional contact crimping tool with interchangeable dies for the installer or service technician.

#### **Properties:**

- reliable, safe, economic and ergonomic tools
- parallel-moving crimping movement with 10 kN crimping force, tested for 20,000 crimps
- change crimping dies quickly and easily in one operation
- the crimping dies are kept together in pairs and stored in custom holders
- wide selection of dies allows you to use one tool frame for 19 different crimping applications!

## **Elpress Mobile**

Mobile hand tool (frame only). Dies are supplementary.

mm²	AWG	Name	Net weight (kg)	Length mm	Width	
0,25-10	24-8	MOBILE	0,554	234	64	_

Elpress Mobile + dies OAA0525 and OEB0210.

### **Mobile Installation**

Mobile hand tool with two interchangeable dies:

- Die OAA0525 for crimping pre-insulated 0.5 2.5 mm² terminals.
- Die OEB0210 for crimping end sleeves 0.25 10 mm².
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width
MOBILE INSTALLATION	0,695	234	64

Elpress Mobile + dies OMP45 and OCC1113.

### Mobile DataCom

Mobile hand tool with two interchangeable dies:

- OMP45 for crimping modular plug RJ45.
- OCC1113 for crimping coaxial contacts RG58, RG59, RG62 and RG71.
- The tool comes with associated dies in blister packaging.

Name	Net weight (kg)	Length mm	Width
MOBILE DATA/COM	0,667	234	64

Elpress Mobile + dies OMS4, OMS3 and OMSL.

Cable stripper LOKE.

### Mobile Solar Kit

Mobile hand tool with three interchangeable dies and cable stripper LOKE for stripping solar panel cable with extra thick insulation:

- OMS4, roll crimping of contacts with sleeve Ø 4 mm, 2.5 6.0 mm<sup>2</sup>.
- OMS3, square crimping of contacts with sleeve Ø 3 mm, 2.5 6.0 mm<sup>2</sup>.
- OMSL, square crimping of contacts, 2.5 6.0 mm<sup>2</sup>.

Name	Net weight (kg)	Length mm	Width
MOBILE SOLAR	0,772	234	64

### **Mobile Box**

Box for the mobile tool with room for the tool as well as 5-6 associated dies. Tools and dies are ordered separately.

Name	Net weight (kg)	Length mm	Width	Height
MOBILE BOX	0,32	246	218	57

### Additional dies for Elpress Mobile

All dies have the same quick and easy way of being inserted into the tool frame. The dies are kept together in pairs and supplied in a cassette that can be docked to other cassettes.

**OAA0160** Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.1-4 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9

OAA0525 Crimping die for Elpress MOBILE tool for asymmetric crimping of pre-insulated terminals 0.5-2.5 mm<sup>2</sup>. AWG 20-13.

OSW0360 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.3-0.75 mm<sup>2</sup> and 4-6 mm<sup>2</sup>. AWG 11-9.

OSW0525 Crimping die for Elpress MOBILE tool for crimping through connectors with heat shrink insulation 0.5-1.5 mm<sup>2</sup> and 1.5-2.5 mm<sup>2</sup>. AWG 15-13.

### General information about Cu terminals

#### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection is achieved through the proper handling of our products. By using Elpress Cu-connection elements together with one of Elpress crimp systems one obtains a connection that has been tested according to the requirements of IEC 61238:1.

#### Cu terminals

Elpress copper connectors are made of pure copper 99.95%. We manufacture tube terminals type KR/KRF/KRD/KRT, through connectors type KS/KSF/KSD/ KST for stranded conductors, IEC 60228 class 2, and multi-stranded conductors IEC 60228 class 5 such as C-sleeves primarily pre-splicing of Cu-lines and many customised products. For flexible and stranded Cu conductors, terminals of type KR/KRF and through connectors of type KS/KSF are used. Terminals type KRD/KRT and through connectors type KSD/KST are normally used for stranded Cu conductors from and including 500 mm<sup>2</sup>. Terminals of type KR/KRF/KRD/ KRT are used mainly in termination to bus bars and apparatus of copper, while through connectors, of type KS/KSF/KSD/ KST, are used mainly in the splicing of copper conductors in cable assemblies. They can also be used for straight splicing of earth conductors. With a branching sleeve, type C, one splices and branches earth conductors, lightning conductor installations and the like.

#### **UL-approved terminals**

KR/KS, KRF/KSF, KRFS, KRFN, KRT/KST UL approved in accordance with file no. E205350.

#### **DNV-approved terminals**

Elpress KR/KS, KRF/KSF and KRT/KST terminals meet DNV's rules for classification of ships and Det Norske Veritas' Offshore Standards. The terminals are approved for installations on ships and mobile "offshore" units.

#### **Number of crimps**

Normally one crimp is required up to and including 150 mm² and two or three crimps for larger areas. Note, however, that another number of crimps may be needed in some cases, see tables for tool dies. If possible, crimps should be placed next to each other with a couple of mm spacing between each one. Overlap is sometimes inevitable.

Crimp sequence for two crimps.

Crimp sequence for three crimps.

### Marking of Cu terminals

Elpress marking system for copper terminals shows logotype, cable area and type number for hexagonal die. This system allows checks that the correct tools have been used when contact crimping because the die number automatically becomes embossed during the contact crimping.

#### Marking tube terminals

25 (on neck)
Type No. for hexagonal die
(Elpress logo) 150 12 F (on the palm)
150 = Cu conductor in mm²
12 = Hole size
F = KRF

#### Marking through connectors

Elpress Logo
Type No. for hexagonal die
16 F (possible screened conductor area and earthing sign)
16 = Cu conductor in mm²
F = KSF

#### Marking C-sleeves (example C70-95)

Area marking (side 1)
25-120 / 140-190
min - max (mm² per conductor) / min - max
(total mm² in the sleeve)
Elpress logo, Die number (side 2)
BCx, "x" corresponds to die number

# Clearance for holes in terminal palm

Screw size	Hole diameter (Ø mm
M3	3,2
M4	4,3
M5	5,3
M6	6,4
M8	8,4
M10	10.5
M12	13
M16	17
M20	21
M24	26

#### Screw and washer

The following apply for bright galvanized type nuts and screws, with strength class 8.8, used for connecting terminals with Cu and Al palms:

- Always use a torque wrench to be certain the right torque is achieved.
   Make sure it is calibrated at regular intervals according to the supplier's instructions.
- Use the recommended torque according to the screw manufacturer's instructions
- Always use a hard plain washer to reduce friction against the connection surface and the edge pressure, hardness min HB200.
- Install as illustrated.

#### **Customised products**

Customised products are an important part of our work. Solving problems for the customer and at the same time manufacturing the products with profitability is a special challenge. This way, we also increase our knowledge of the customers' needs. The above terminals include different models of T-connectors where you can connect three conductors of the same size using only one terminal. These are used, for example, in transformer manufacturing. Other connections in transformer manufacturing are lead-in pins and special terminals for switches. In conclusion, all terminals are designed to easily ensure a high-quality connection even in advanced applications.

### Tube terminals 0.75 - 10 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn.
- For multi-stranded (class 5) and stranded (class 2) Cu conductors.
- UL approved (1.5 -10 mm²).

### Examples of palm marking KR: 10 10

 $10 = mm^2 10 = Palm hole for M10$

## KRFS tube terminals with narrow palm 50 - 400 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn.
- Inspection hole
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- Easy to install via cable gland, allows for pre-installation.
- The width of the palm is less than or as wide as the neck.
- UL-approved, DNV approved.

#### Example of marking KRFS: 17 (neck) Elpress logotype 70 10F (palm)

17 = Die no. 70 = mm² 10 = palm hole for M10 F = type KRF for stranded and flexible conductors.

t = palm thickness, s = strip length

# KRF angled terminals 90° 10 - 150 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn.
- Inspection hole
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- UL approved (35-150 mm²). DNV approved (16-150 mm²).

#### Example of marking KRF: 17 (neck) Elpress logotype 70 10F (palm)

17 = Die No. 70 = mm<sup>2</sup> 10 = palm hole for M10 F = type KRF for stranded and flexible conductors.

### DIN 46235 tube terminals 6 - 1000 mm<sup>2</sup>

- Din tube terminals for Cu conductors.
- Material: Cu 99.95%, tin plated Cu/Sn.
- Dimensions according to DIN 46235, the number of crimps is indicated on the neck of the terminal.
- For crimping DIN 46235 terminals, use dies according to DIN 48083.

#### Example of plate marking: 95 1095 = mm<sup>2</sup> 10 = palm hole for M10

## KS/KSF through connectors with partition 10-500 mm<sup>2</sup>

- Material: Cu 99.95%, tin plated Cu/Sn.
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- With partition to prevent oil leakage.
- UL approved (1-500 mm²). DNV approved (16-400 mm²).

#### Examples of marking: 20 95F (Elpress logotype is included on the marking.)

### C-sleeves 6 - 300 mm<sup>2</sup>

• Material: Cu 99.95%. Tin plated sleeves (except C95-120, C150-185,

- C240-300 and C23 which are not tin plated). • For splicing and branching earth lines and other types of equipotential
- bonding applications. In some cases, 2 or 3 crimps are required. • Unique patented solution based on previously patented solution for the C25-50 branching sleeve (formerly known as C89).
- Possible to front feed all branches.

Through connectors of aluminium-copper 300 - 400 mm²	8
Aluminium-copper through connectors 16 - 400 mm²	9

### General information about Al and AlCu terminals

#### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection is achieved through the proper handling of our products.

#### Al terminals

Elpress terminals for Al cable are made of solid and pure aluminium 99.7%. We manufacture Al terminals type AK and AS, but also customised terminals or terminals larger than 1200 mm<sup>2</sup>.

Terminal type AK is used with Al conductors for connection to busbars and apparatus sockets.

Through connectors type AS are used when connecting aluminium-conductors.

Indent crimping of Elpress through connector using crimp head V250.

#### **AlCu terminals**

Elpress bimetallic terminals (AlCu) are manufactured from solid material which is friction welded together, joining Aluminium with Copper. This is done when aluminium is rotated towards copper under pressure and it is the method that provides the best connection between Al and Cu.

Terminals of type AKK are used at the end of an Al conductor for connection to a Cu bus bar.

Through connectors of type AKS are used to connect Al conductors to Cu conductors.

Pin sockets type AKP are manufactured for connection of Al conductors to apparatus

intended for copper pin connections.

#### **Number of crimps**

The Elpress system is suitable for both stranded conductors, acc. to IEC 60228 class 2, and solid conductors, acc. to IEC60228 class 1. However, it should be noted that there is an area difference between stranded and solid Al conductors (see tables). When using sectoral Al-cable, a pre-rounding is normally required, which is done with a round crimping tool. When contact crimping Al terminals, two crimps should always be made. Note the crimp sequence.

#### **Customised products**

Customised products are an important part of our work. Solving problems for the customer and at the same time manufacturing the products with profitability is a special challenge. This way, we also increase our knowledge of the customers' needs. The above terminals include different models of T-connectors where you can connect three conductors of the same size using only one terminal.

Upon request for variants in hole arrangement, the size of the connection flag and the like, we make variants of cable clips.

#### Marking Al and AlCu terminals

Elpress system for marking Al and AlCu terminals states the conductor area (for small and solid conductors) and reference to rounded and contact crimp tools within the Elpress range. A tool reference for hexagonal crimping copper is given on the bimetallic through connectors.

#### **TERMINALS:**

Explanatory marking Al and AlCu terminals Barrel marking i.e. ALU300-R21-P36 (Elpress logotype) T2

ALU300 = Al conductor in mm<sup>2</sup> R21 = size no. for punch and matrix for pre-rounding

P36 = size no. for punch and matrix for crimping

Palm marking: (Elpress logo) 16 = Screw dimension

#### THROUGH CONNECTORS:

Explanatory marking Al and AlCu terminals For example: Cu240 - 30 (Elpress logotype) Cu240 = Cu conductor in mm<sup>2</sup> 30 = Size no. for hexagonal die

For example: ALU300-R21-P36 (Elpress logotype) T2

ALU300 = Al conductor in mm<sup>2</sup> R21 = size no. for punch and matrix for pre-rounding

P36 = size no. for punch and matrix for crimping

#### s, s1 = insulation stripping length

# Aluminium through connectors with cable stop 300 - 400 mm<sup>2</sup>

- Used primarily for connecting two Al conductors with the same area
- For the indent crimping of Al-terminals, two crimps are always required, see image.

Crimp sequence

Stranded Al mm²	AWG/ MCM	Name	d mm	D	L	s	Tool	Pcs/pack
300	600	AS300B	22,5	37	150	65	V1300, V250	1
400	750	AS400B	25	37	150	64	V1300, V250	1

# Aluminium-copper terminals 16 - 1200 mm<sup>2</sup>

• Used for connection of Al conductors for apparatus outlets and busbars of Cu.

s = strip length, t = palm thickness

# Aluminium-copper terminals 300 - 400 mm<sup>2</sup>

- Used for connection of Al conductors for apparatus outlets and busbars of Cu, etc.
- For stranded wire Al conductor.
- Two crimps are needed, see image.

s = strip length (AI), s1 = strip length (Cu)

# Through connectors of aluminium-copper 300 - 400 mm<sup>2</sup>

- Used for connecting Al conductors and Cu conductors
- Stranded/solid Al conductors, stranded/flexible Cu conductors. For multi-stranded Cu conductors, contact crimping using the DUAL system is recommended.
- Two crimps are needed for Al (see image).
- When crimping the Al part, use matrix P2537M and punch P2537D, no matrix holder is needed.
- When crimping the Cu part, place the dies between the marking on the sleeve and the edge of the Cu part.

 $If class 5 \ Cu \ conductors \ are \ used, \ use \ the \ corresponding \ DUAL \ tool \ for \ (D)V1300 \ or \ (D)V250., \ s=strip \ length \ (Al), \ s1=strip \ length \ (Cu)$ 

### Aluminium-copper through connectors 16 - 400 mm<sup>2</sup>

- Connector from Al conductor to Cu conductor.
- Stranded/solid Al conductors, stranded/multi-stranded Cu conductors.

- For multi-stranded Cu conductors, contact crimping using the DUAL system is recommended.
- Two crimps are required for AI (see image) normally one for Cu.
- When hexagonally crimping the Cu part, the dies are placed between the marking groove and the outer edge.

### General information - Tools for Cu, Al and AlCu terminals

### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection will be achieved through the proper handling of our products.

### Hydraulic crimp systems

Elpress hydraulic crimp systems crimp from 10 to 1200 mm<sup>2</sup>. The systems consist of pumps and crimp heads that can be freely combined or with complete hand-held tools, where these devices are integrated. Wide range of accessories available for crimping, pre-rounding, cutting etc. Together with the matching terminals, the complete system is formed. Both pumps and hand-held tools have, with a few exceptions, quick feed function that means crimping can begin after a few pump strokes. The systems have a built-in ratchet lock that ensures that an initial crimp is completed and thus produces results with the best characteristics. Pumps that can be connected to the different crimp heads provide the option of comfortable work in difficult situations and with maximum flexibility.

Crimp head V1300C2 Die pair 13DCB20. with dies.

### **Cu-terminals**

The V1300 system is used for crimping Cu-terminals 10-400 mm<sup>2</sup>. An openhead C version is also available for better access in confined spaces.

#### **Al-terminals**

The V1300 system is used for the indent crimping of Al connections and pre-rounding of Al conductors 16-240 mm². Round crimping is carried out on sector-shaped Al conductors.

#### **Cu-terminals**

The V250 system is used for crimping Cu-terminals 10-800 mm<sup>2</sup>.

#### **Al-terminals**

The V250 system is used for indent crimping Al-terminals and pre-rounding Al conductors 16-630 mm<sup>2</sup>. Round crimping is carried out on sector-shaped Al conductors.

### Crimp tool for Cu-terminals 4 - 25 mm<sup>2</sup>

#### **Properties:**

- certified tool for connection according to norms
- ergonomic handles facilitate installation
- scissor movement for access in confined spaces
- ratchet function that does not release until the crimp is complete
- hexagonal crimping with clearly marked crimping positions

### ES2258

Tested and certified mechanical hand-held tool for crimping Cu-terminals, type CUT 6-16 mm<sup>2</sup> and KR/KS 4-10 mm<sup>2</sup>.

mm²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width	Height	
4-16	12-6	ES2258	Hexagonal	0,66	300	30	70	

Tested and certified mechanical hand-held tool for crimping Cu-terminals, type KRF/KSF 16-25 mm<sup>2</sup>.

Crimp geometry

### T3165

Mechanical hand-held tool for crimping Cu-terminals.

#### **Properties:**

- equipped with ratchet function
- crimp wheels, rolled steel, which provide high strength
- crimp force up to approx. 35 kN

mm²	Name	Crimp geometry	Net weight (kg)	Length mm	Width	Height	Used for
10-70	T3165A1	Punch	2,930	500	44	80	KR/KRF/KS/KSF

Crimp geometry

### **TH** series

Mechanical hand-held tool for crimping Cu-terminals, type KR/KRT and KS/KST,  $6-120 \text{mm}^2$ .

#### **Properties:**

- rotating crimping wheel
- no full closure mechanism
- crimp force up to approx. 35 kN

mm²	Name	Crimp geometry	Net weight (kg)	Length mm	Width	Height	
6-50	TH0650T	Hexagonal	1,339	400	44	80	
10-120	TH10120T	Heyagonal	3 761	650	44	80	

### Battery-powered crimp tool for Cu-terminals 4 - 95 mm<sup>2</sup>

# PVL350 - Elpress Mini

Crimp geometries

Battery-powered tool for crimping tube terminals and through connectors of type KR/KS, KRF/KSF, KRT/KST 10-70 mm<sup>2</sup> and KRD/KSD up to 95 mm<sup>2</sup> with special "MB" dies.

#### **Properties:**

- opening head for easy die changes and good accessibility
- high-performance 10.8 V Li-Ion battery with indication of charge status
- very good accessibility and ergonomics
- opening, rotatable "flip top" head for easy die changes and slim crimp head for good accessibility
- rapid crimp sequence 3-4 seconds
- approx. 100-180 crimps/battery charges (depending on temp, frequency etc.)
- 2-component housing with grip-friendly protection. One-handed operation for easy control of all tool functions
- lightweight, and rapid crimping sequence for maximum efficiency
- automatic return of the dies when crimping is complete

mm² (Cu)	Name	Crimp geometry	Net weight (kg)	Length mm	Width	Height	Note
4-95	PVL350	Hexagonal, Oval	1,6	360	116	75	Charger: 230VAC

## Crimp tool for Cu-terminals 10 - 240 mm<sup>2</sup>, Al-terminals 16 - 25 mm<sup>2</sup> (-35 solid) mm<sup>2</sup> and C-sleeves 100 mm<sup>2</sup> (total)

Tested and certified crimp head for crimping Cu-terminals, type KR/KS 10 mm<sup>2</sup>, KRF/KSF 16-150 mm², KRD/KSD 16-185 mm², KRT/KST 10-240 mm², Al-terminals 16-25 mm² (-35 solid), C-sleeves 6/6-50/50 mm², DIN 46235 10-95 mm².

Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

#### **Properties:**

- working pressure 63 MPa (630 bar)
- crimp force 55 kN
- robust fabric bag with room for 10 dies included

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-240	16-25	16-35	V600 Punch, Hexagonal, Oval	2,45	189	74	53

#### Crimp geometries

#### Properties:

- fast-feed to crimp engagement provides short crimp times
- crimp force 55 kN
- · delivered in sturdy textile bag

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length	Width	Height
10-240	16-25	16-35	V611	Punch, Hexagonal, Oval	2,6	425	115	53

### Crimp geometries

Crimp geometries

### PVX611/PVX611DB

Tested and certified battery-powered crimp tool for crimping Cu-terminals, type KR/KS 10 mm², KRF/KSF 16-150 mm², KRD/KSD 16-185 mm², KRT/KST 10-240 mm², Al-terminals 16-25 mm<sup>2</sup> (-35 solid), C sleeves 6/6-50/50 mm<sup>2</sup>, DIN 46235 10-95 mm<sup>2</sup>. PVX611DB has an extra battery.

#### **Properties:**

- protects against dirt and dust through the closed chassis
- ergonomic design ensures optimum balance in the user's hand
- swivel opening crimp fork
- · crimp force control using pressure monitoring
- one handed operation for easy work
- · LED lighting for easier work
- · fast-forward feeding for more efficient crimping
- display with information about the tool and service intervals
- tested together with Elpress TB dies and KB22/KB25
- crimp monitoring via display when the correct pressure/complete crimping is not achieved (warning light LED and signal)

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height	Note
10-15	0 16-25	16-35	PVX611	Punch, Oval, Hexagonal	5,50	414	116	75	Charger: 230VAC
10-15	0 16-25	16-35	PVX611DB	Punch, Oval, Hexagonal	5,85	414	116	75	Delivered with 2 batteries
10-15	0 16-25	16-35	PVX611-US	Punch, Oval, Hexagonal	5,50	414	116	75	Charger: 115VAC
10-15	0 16-25	16-35	PVX611-WOBC	Punch, Oval, Hexagonal	3,90	414	116	75	Without Battery/ Charger

#### **Properties:**

- opening for easy die changes and for quick removal after jointing
- crimp force approx. 57 kN
- · advanced force ratio for lowest handle force
- easy to work with in confined spaces
- only four die pairs are required to crimp 10-95 mm<sup>2</sup> Cu
- quick feed function
- · delivered in a metal box

mm² (Cu)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

# Accessories for crimping Cu with tools T2600, V600, V611 and PVX611

### Crimp dies for KRF/KSF

For Cu-terminals, hexagonal crimping. Supplied in pairs. The TB dies below are intended for Cu-terminals, type KRF/KSF, together with Cu conductor according to IEC 60228 (class 2, 5 and 6).

Die pair TB7-20 for V600, V611, PVX611 and T2600.

Die pair KB22 for V600, V611 and PVX611.

Crimp sequence for two crimps.

Crimp sequence for three crimps.

mm² KR/KS, KRF/KSF	Name	Number of crimps	Net weight (kg)

### Crimp dies for KRD/KSD

For Cu-terminals, hexagonal crimping. Supplied in pairs. The TB dies below are intended for Cu-terminals, type KRD/KSD, together with Cu conductor according to IEC 60228 (class 2).

Die pair TB7-20 for V600, V611, PVX611 and T2600.

Die pair KB22 for V600, V611 and PVX611.

Crimp sequence for two crimps.

Crimp sequence for three crimps.

mm² KRD/KSD	Name	Number of crimps	Net weight (kg)
16 / 70	TB8-14	1	0,149
25 / 50	TB9-12	1	0,150
35 / 95	TB11-16	1, 2	0,142
150	KB22	3	0,150
185	KB25	3	0,147

KBxx is not allowed to be used with T2600

### Crimp dies for KRT/KST

For Cu-terminals, hexagonal crimping. Supplied in pairs. The TB dies below are intended for Cu-terminals, type KRT/KST, together with Cu conductor according to IEC 60228 (class 2).

Die pair TB7-20 for V600, V611, PVX611 and T2600.

Die pair KB22 for V600, V611 and PVX611.

Crimp sequence for two crimps.

Crimp sequence for three crimps.

mm² KRT/KST	Name	Number of crimps	Net weight (kg)
10 / 120	TB7-19	1, 2	0,137
16/95	TB8,5-18	1, 2	0,137
25 / 70	TB10-16	1, 2	0,143
35 / 50	TB12-14	1	0,147
150	KB22	3	0,150
185	KB24	3	0,144
240	KB26	3	0,145

KBxx is not allowed to be used with T2600

### Crimp dies for overhead line

For joints on overhead lines AlMgSi (Super B) and Al59, hexagonal crimping. Supplied in pairs.

Die pair TBNP 16-20.

mm² Overhead line	Name	Number of crimps	Net weight (kg)	Note
31 - 99	TBNP16-20	2x5, 2x10	0,135	Used for AlMgSI and FeAI, LFS31, LFS62 and LFS99

# Crimp dies for C-sleeves

For Cu branching with C-sleeves, oval crimping. Supplied in pairs.

1 and 2 crimps.

Through conductor mm²	Branching mm²	mm²	Name	Number of crimps	Net weight (kg)	Die holder required	Note
6-16 (C5) & 5-25 (C6)	6-16 (C5) & 5-25 (C6)	Total: 12-26 (C5), 30-50 (C6)	TBC5-C6	1	0,142	No	C5 (Sleeve: C6-10) and C6 (Sleeve: C16-25)
6-50	6-50	Total: 50-100 (C89)	TBC89-B13	2, 1	0,123	No	C89 (Sleeve: C25-50) and B13 (KRF/KSF: 35 mm²)

# Accessories for crimping Al with T2600, V600, V611 and PVX611 Punch and Matrix for Al

For Al-terminals, indent crimping. Not used for pre-rounding.

Crimp sequence

Stranded Al mm²	Solid Al mm²	Matrix	Matrix holder	Punch	Number of crimps
16-25	16-35	TP13M	TV2620	TP13D	2

Two crimps are always needed.

### Crimp dies for Al and Cu

For crimping 16-25 mm² Al and 10-16 mm² Cu. Rotatable die, one side for crimping aluminum and the other side for crimping copper. Used in the V600 system.

Punch crimping.

The dies below are intended to be used together with Cu/Al conductors according to IEC 60228.

Stranded Al mm²	mm² KR/KS, KRF/KSF	Name	Number of crimps	Net weight (kg)	Note
16-25	10-16	TBKA9-11,5	1	0,14	Used to crimp AS1625 and AKS1625-1016

### DUAL SYSTEM for crimping flexible conductors in KRF/KSF terminals for demanding applications 10-400 mm<sup>2</sup>

#### **Properties:**

- patented crimping
- for crimping of flexible Cu conductors according to IEC 60228, type class 5
- used with Elpress KRF/KSF terminals
- for extra harsh environments such as cars and trains, where the terminals in addition to electrical properties are also exposed to, for example, corrosion, mechanical durability and vibration
- meets IEC/EN 61238:1
- meets corrosion requirements according to DIN V 40 046-37
- meets the requirements for vibration according to EN 50 155
- meets the requirements of mechanical strength according to SEN 24 50 10

#### Crimping sequence

Contact crimping takes place in a two-stage movement, first a hexagonal crimping that provides optimal symmetrical contact with the conductor, which means that no wires are broken or come apart in the edge facing the connector. This is followed by indent crimping, which provides 30% better electrical properties.

### PVX1300/PVX1300DB

Tested and certified battery-powered crimp gun for contact crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm², Al-terminals 16-400 mm² (-240 solid), DIN 46235 10-300 mm<sup>2</sup>, C sleeves up to 240 mm<sup>2</sup> total area (C95-120).

#### **Properties:**

- ergonomic design ensures optimum balance in the user's hand
- · crimp monitoring with warning light and signal when the correct pressure/full crimp is not achieved
- LED work lighting
- possibility of documentation of each crimp for unique service control
- crimp force 124 kN (13 tonnes)
- crimps/charging: 60-120 depending on size and temperature
- crimp time: 4-12s depending on size
- usage temperature -20°C to +40°C
- Li-Ion Makita, 5.0 Ah, 18V
- charger Li-Ion Makita, charging time 22 min 110-240VAC 50-60Hz
- DUAL: 10 300 mm<sup>2</sup>

#### Crimp geometries

### **DV1300**

Tested and certified crimp head with patented DUAL technology for crimping Cu-terminals, type KR/KRF and KS/KSF 10-300 mm<sup>2</sup>. Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

#### **Properties:**

- crimp head with the patented DUAL technology that provides optimised hexagonal crimping + a certain amount of indent crimping in two integrated steps
- working pressure 63 MPa (630 bar)
- crimp force 130 kN
- no die holders are needed for DUAL dies
- other accessories (without DUAL function) for crimping both Cu and Al-terminals can be used
- DUAL: 10 300 mm<sup>2</sup>

### Accessories for crimping Cu with V1300, V1311-A and PVX1300

The B dies below are intended for Cu-terminals, type KR/KRF and KS/KSF, together with both stranded, multi-stranded and very flexible Cu conductors of Class 2, 5 and 6 respectively according to IEC 60228. For multi-stranded (Class 5) Cu conductors, crimping is recommended with the Dual system. KRD/KSD and KRT/KST are only used for stranded (Class 2) Cu conductors.

### Crimp dies for KRF/KSF

For Cu-terminals, hexagonal crimping. Supplied in pairs. The B dies below are intended for Cu-terminals, type KR/KRF and KS/KSF, together with Cu conductors according to IEC 60228. For multi-stranded (Class 5) and very flexible (Class 6) Cu conductors, crimping with the Dual system is recommended. Use inner die holder **V1316** and outer die holder **V1318**.

Integrated dies 13B32.

Crimp sequence for one crimp.

mm²	Name	Number of crimps	Net weight (kg)
10	B8	1	0,101
16	B9	1	0,103
25	B11	1	0,109
35	B13	1	0,113

### Crimp dies for KRT/KST (integrated)

For Cu-terminals, hexagonal crimping. Supplied in pairs. The integrated B dies below are intended for Cu-terminals, type KRT and KST, together with Cu conductors Class 2 according to IEC 60228. Used without a die holder.

Crimp sequence for two crimps.

mm² KRT/KST	Name	Number of crimps	Net weight (kg)
25	13B10	1	0,451
35	13B12	1	0,457
50	13B14	1	0,471
70	13B16	1	0,466
95	13B18	1	0,480
120	13B19	1	0,476
150	13B22	2	0,421
185	13B24	2	0,001
240	13B26	2	0,420
300	13B30	2	0,413
400	13B32	2	0,408

### **Crimp dies for C-sleeves**

For Cu branching with C-sleeves, oval crimping. Unless otherwise stated, use inner die holder **V1316**, and outer die holder **V1318**.

Outer die holder V1318, BC dies, inner die holder V1316.

One and three crimps.

Through conductor mm²	Branching mm²	mm²	Name	Number of crimps	Net weight (kg)	Die holder required
6-16	6-16	Total: 12-26	BC5	1	0,112	Yes
5-25	5-25	Total: 30-50	BC6	1	0,149	Yes
6-50	6-50	Total: 50-100	BC8-9	1	0,138	Yes
25-120	25-120	Total: 95-190	13BC13	3	0,410	
25-185	25-185	Total · 175-240	13BC15	3	0.404	

### Die holders for the 1300 system

Outer and inner holder for the 1300 system.

Inner die holder V1316

Name	Net weight (kg)
V1316	0,197
V1318	0,309

A safer, more durable and easier to handle case for Elpress crimping tools, PVX1300 and PVX1300C2. CASE ADVANCED can handle the most demanding conditions. The case is IP67 rated, withstands dust and heavy impacts. Pull handles and wheels make it easier for the user to transport the tool and the right accessories.

#### **Properties:**

- lifetime warranty.
- handles can withstand up to 30 kg.
- compartment for easy storage of dies, matrices and punches.
- withstands temperatures from -30 °C up to +90 °C.
- the case can be locked with double padlocks.
- pressure equalisation valve.
- IP67 (fully waterproof to a depth of 1 metre).
- STANAG4280, DEF-STAN 81-41 Certification.

Name	Net weight (kg)
PVX1300-CASE-ADV	7,6

### Storage box LV1300B

Storage box that holds the V1300 tool and accessories to crimp Elpress Cu-ter-

#### **Properties:**

- material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height
LV1300B	5,12	570	467	130

### Storage box L1300 CU-ALU

Additional storage box for accessories for PVX1300. The box holds all the accessories needed when working with the 1300 system from Elpress. The box holds space for 14 B-dies, 1-2 die holders, 12-14 integrated B-dies (DUAL-die pairs), 4 punches (AL crimping), 8 pre-rounding punches and 3 matrixes as well as a matrix holder (example). The box is designed together with the L-PVX1300, and is advantageously used with this box.

#### **Properties:**

- · material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height
L1300 CU-ALU	3,76	570	435	175

### Storage box L-PVX1300

Additional storage box for PVX1300. The box is designed to hold PVX1300 with charger and an extra battery. there's also extra space for a few dies, stripping tool and terminals. The box is designed together with the L1300 CU-ALU and is advantageously used together.

#### **Properties:**

- material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height	
L-PVX1300	3,76	570	435	175	

### Accessories for crimping Al with V1300, V1311-A and PVX1300

# Punch and Matrix for indent crimping

For Al-terminals, indent crimping. For the indent crimping of Al-terminals, two crimps are always required.
For 16-150 (185 solid) mm² use matrix holder V1320.

Crimp sequence

Stranded Al mm²	Solid Al mm²	Matrix	Punch	Number of crimps	Matrix holde required	er Punch holder required	Note
16-25	16-35	P13M	P13D	2	Yes	No	
35-70	50-95	P20M	P20D	2	Yes	No	
95-150	120-185	P25M	P25D	2	Yes	No	
185-240	240	13P32M	P32D	2	No	No	
300-400		13P37M	13P37D	2	No	No	Matrix with safety line. For Al-terminals, type AKKxxxB/AKSxxxB and sleeves type ASxxxB.

### Punch and Matrix for pre-rounding

For Al conductors, pre-rounding. Use matrix holder **V1320**.

Matrix holder V1320, matrix R6MR, punch 13R6DR.

Stranded Al mm²	Solid Al mm²	Matrix	Punch	Number of crimps	Matrix holder required	Punch holder required
16	16 (+25)	R6MR	13R6DR	1	Yes	No
25	35	R7MR	13R7DR	1	Yes	No
35	50	R8MR	13R8DR	1	Yes	No
50	70	R9MR	13R9DR	1	Yes	No
70	95	R12MR	13R12DR	1	Yes	No
95	120	R13MR	13R13DR	1	Yes	No
120	150	R15MR	13R15DR	1	Yes	No
150	185	R16MR	13R16DR	1	Yes	No
185	240	13R18MR	13R18DR	1	Yes	No
240		13R20MR	13R20DR	1	Yes	No

### Matrix holder for the 1300 system

Matrix holder for non-integrated matrix. Punch holder not required for the 1300 system.

Stranded Al	Solid Al	Name	Net weight
mm²	mm²		(kg)
16-150	16-185	V1320	0.367

# MultiCrimp punch and matrix for indent crimping

For Al-terminals 50-240 mm², indent crimp, both round- and sector shaped conductors. Without need for pre-rounding of sector shaped conductors. Used without matrix holder.

Stranded Al mm²	Matrix	Punch	Number of crimps	Net weight (kg)
50-95	13P5095M	13P5095D	1	0,394
120-150	13P120150M	13P120150D	1	0,394
185-240	13P185240M	13P185240D	2	0,394

### Storage box L-Alu

Additional storage box for LV1300B and LV250, with space for accessories to crimp Elpress Al-terminals.

#### **Properties:**

- material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height
L-ALU	5,17	570	467	130

### Storage box L-PVX1300

Additional storage box for PVX1300. The box is designed to hold PVX1300 with charger and an extra battery. there's also extra space for a few dies, stripping tool and terminals. The box is designed together with the L1300 CU-ALU and is advantageously used together.

#### **Properties:**

- material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height
L-PVX1300	3,76	570	435	175

### Storage box L1300 CU-ALU

Additional storage box for accessories for PVX1300. The box holds all the accessories needed when working with the 1300 system from Elpress. The box holds space for 14 B-dies, 1-2 die holders, 12-14 integrated B-dies (DUAL-die pairs), 4 punches (AL crimping), 8 pre-rounding punches and 3 matrices as well as a matrix holder (example). The box is designed together with the L-PVX1300, and is advantageously used with this box.

#### **Properties:**

- · material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height	
L1300 CU-ALU	3,76	570	435	175

# Accessories for crimping overhead lines with V1300, V1311-A and PVX1300

### Crimp dies for AlMgSi (Super B) and Al59

Supplied in pairs. Hexagonal crimping. Use inner die holder V1316, and outer die holder V1318.

Outer die holder V1318, BNP dies, inner die holder V1316.

mm² Overhead line	Name	Number of crimps	Net weight (kg)	Die holder required	Note
31-62	B16NP	2x5	0,118	Yes	AlMgSi 31-62 mm², FeAL: 62 mm², ALUS 50 mm²
99	B20NP	2x5	0,126	Yes	AlMgSi 99 mm², FeAL: 99 mm²
157	13B26	2x16	0,420	No	Overhead line: 157 mm² (2x16 crimps)
241	13B32	2x16	0,408	No	Overhead line: 241 mm² (2x16 crimps)

### Crimp dies for overhead lines FeAl

Supplied in pairs. BxxFE dies are used for steel sleeves and BxxNP dies are used for Al-sleeves. Use inner die holder **V1316** and outer die holder **V1318**.

Die pair B16NP

mm²	Die Fe	Die Al	Number of crimps
62	B6FE	B16NP	2x5
99	B8FE	B20NP	2x5

## Tools for Cu terminals 10 - 400 mm<sup>2</sup> and C sleeves 240 mm² (total)

### V1300C2

Tested and certified crimp head for crimping Cu-terminals, type KR/KRT 10 mm<sup>2</sup>, KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm². Used in combination with foot pump P4000 or battery and mains powered pump PS710 (battery powered version of PS710E is also available).

#### Properties:

- working pressure 63 MPa (630 bar)
- crimp force 130 kN
- versatile and easy to use

mm² (Cu)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-400	V1300C2	Hexagonal, Oval	4,6	296	125	75

### Crimp geometries

Tested and certified hydraulic hand-held tool for crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/ KST 16-400 mm<sup>2</sup>.

#### **Properties:**

fast forward feeding

V1311C2-A

- the fork can rotate 180°
- crimp force 130 kN
- requires low handle force, about 245N at maximum force
- easy to carry and work with

mm² (Cu)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-400	V1311C2-A	Hexagonal, Oval	5,7	625	150	76

Storage box supplied with the V1311C2-A and V1311-A tools.

### PVX1300C2/PVX1300C2DB

Tested and certified battery-powered crimp gun for crimping Cu-terminals, type KR/KRF and KS/KSF 10-400 mm<sup>2</sup>, C-sleeves up to 240 mm<sup>2</sup> total area (C95-120).

### Properties:

- ergonomic design ensures optimum balance in the user's hand
- crimp monitoring with warning light and signal when the correct pressure/full crimp is not achieved
- LED work lighting
- possibility of documentation of each crimp for unique service control
- crimp force 124 kN (13 tonnes)
- usage temperature -20°C to +40°C
- Li-Ion Makita, 5.0 Ah, 18V
- charger Li-Ion Makita, charging time 22 min 110-240VAC 50-60Hz
- DUAL: 10 300 mm<sup>2</sup>

mm² (Cu)	Name	Crimp geometry	Net weight (kg)	Length	Width	Height	Note

10-400	PVX1300C2-US	Dual, Hexagonal, Oval	5,6	399	319	75	With US charger
10-400	PVX1300C2DB-US	Dual, Hexagonal, Oval	6,2	399	319	75	Delivered with battery and US-charger
10-400	PVX1300C2-WOBC	Dual, Hexagonal, Oval	5,6	399	319	75	without Battery/Charger

### Table stand for Cu- and Al-terminals

The TS1300 is a table stand that can be used with crimp heads DV1300C2 or V1300C2-AL.

The table stand is designed for operators with high frequency use of the C2 crimp head. With the table stand you get a stable, safe and easy use of the C2 crimp head.

mm²	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-400	TS1300CU	Dual, Hexagonal, Oval	18,7	190	100	312
16-400	TS1300AL	Punch	20,9	190	100	330
10-400	TS1300		14,1	190	100	215

TS1300 with crimp head

# Accessories for crimping Cu with V1300C2, V1311C2-A and PVX1300C2

The B dies below are intended for Cu-terminals, type KR/KRF/KRD/KRT and KS/KSF/KSD/KST, together with both stranded and multi-stranded Cu conductors of Class 2 according to IEC 60228. For multi-stranded (Class 5) Cu conductors, crimping is recommended with the Dual system.

### Crimp dies (C-fork) for KRF/KSF

Supplied in pairs.

For Cu-terminals, hexagonal crimping. Used with die holder V1330.

B dies.

Crimp sequence for one crimp.

## Accessories for crimping overhead lines with V250

## Crimp dies for AlMgSi(Super B) and Al59

Supplied in pairs. For joints on overhead lines AlMgSi (Super B) and Al59, hexagonal crimping. Use inner die holder **V2506** and outer die holder **V2508**.

Die holder V2508, BNP dies, die holder V2506.

mm² Overhead line	Name	Number of crimps	Net weight (kg)	
31-62	B16NP	2x5	0,118	
99	B20NP	2x5	0,126	
157	B26NP	2x8	0,140	

## Crimp dies for overhead lines FeAl

Supplied in pairs. BxxFE dies are used for steel sleeves and BxxNP dies are used for Al-sleeves. Use inner die holder **V2506** and outer die holder **V2508**.

Die pair B16NP

mm²	Die Fe	Die Al	Number of crimps	
62	B6FE	B16NP	2x5	
99	B8FF	B20NP	2x5	

## Storage box L-Alu

Additional storage box for LV1300B and LV250, with space for accessories to crimp Elpress Al-terminals.

#### **Properties:**

- material plywood
- interior material polyethylene
- solid, moulded interior

Name	Net weight (kg)	Length mm	Width	Height
L-ALU	5,19	570	467	130

## Storage box LV250

Storage box with space for tool V250 and all necessary accessories to crimp Elpress Cu-terminals.

#### **Properties:**

- material plywood
- interior material polyethylene
- · solid, moulded interior

Name	Name Net weight (kg)		Width	Height	
IV250	5.09	570	467	130	

### Crimp station for industrial crimping of KRF/KSF terminals 10 - 300 mm<sup>2</sup>

### **CS2500**

Crimp station CS2500.

Elpress crimp station CS2500 offers efficient production with the greatest possible personal safety. Advanced, intelligent properties combined with simplicity make the product unique.

#### **Properties:**

- designed for continuous production of electric Cu-terminals, 10-300 mm²
- quick locking of the terminal using low force shortens the overall time for crimping
- automatic setting of crimp force up to 250 kN, provides optimal service life for tools
- only one crimp necessary throughout the work area
- integrated Elpress DUAL System
- hydraulic pump PS710D with control, monitoring and error reporting
- operated with a foot pedal
- CE approved, meets the requirements of the Safety of machinery directive
- software Analyzer for analysis and report printout of crimps
- 110-240VAC 50-60Hz

mm² (Cu)	Name	Net weight (kg)	Length mm	Width	Height
10-300	CS2500	59,5	200	350	340

Pump PS710D.

## Crimp dies for CS2500

Supplied in pairs.

For Cu-terminals, type KR/KRF and KS/KSF and flexible Cu conductors, no die holders are required.

Die pair 13DCB20.

		Number of	N1 -4 ! = l-4

## Analyzer - software for analysis of crimps and system calibration

Analyzer, measures and analyses each individual crimp.

The Analyzer program is used to ensure quality crimps and save data to quality documents. By simple means, all crimps can be studied in a PC environment where they get their own ID number for full traceability. The unique SPC tool, Statistic Process Control, makes it possible to consider crimping as a measurable process. Analyzer is a statistical program for systematic studies of variations in the crimp process. Furthermore, you can export, import, print or save graphs, calibration data, batch reports etc.

#### **Properties:**

- Elpress Analyzer improves overall quality
- helps the user
- provides a process improvement tool
- measures and shows all crimps
- supports preventive maintenance of equipment
- creates traceability and documentation
- makes communication easy
- increases user skills
- eliminates incorrect crimps
- comes with instructions for use

## ٥

# Tools for Cu-terminals 500 - 1000 mm<sup>2</sup> and Al-terminals 800 - 1200 mm<sup>2</sup>

## V1470

Tested and certified crimp head for contact crimping Cu-terminals, type KRF/KSF 500-800 mm², KRD/KSD, KRT/KST 500-1000 mm², Al-terminals 800-1200 mm², C-sleeves 245-540 mm² (C150-185 och C240-300). Used in combination with foot pump P4000 or electrically powered pump P5710.

#### **Properties:**

- working pressure 63 MPa (630 bar)
- crimp force 400 kN
- supplied in plywood box

mm² (Cu)	mm² (Stranded Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height
500-1000	800-1200	V1470	Punch, Hexagonal, Oval	20,76	510	235	103

#### Crimp geometries

## Crimp dies for KRF/KSF, KRD/KSD and KRT/KST

Supplied in pairs.

 $For \ Cu-terminals, hexagonal\ crimping.\ When\ crimping\ Cu-terminals,$ 

two crimps are always required. Flexible conductors in KRF/KSF and stranded conductors in KRD/KSD/KRT/KST.

Crimp sequence for two crimps.

mm²	Name	Number of crimps	Net weight (kg)	Die holder required	Note
500	B4040	2	4,011	No	For stranded Cu-conductors: KRD/KSD, KRT/KST 500 mm²
500	B4042	2	4,067	No	For multi strand Cu-conductors: KRF/KSF 500 mm²
630	B4045	2	3,959	No	For stranded Cu-conductors: KRD/KSD, KRT/KST 630 mm²
630-800	B4053	2	3,901	No	For multi strand Cu-conductors: KRF/KSF (and stranded Cu conductors 800 mm²: KRD/KSD/KRT/KST)
1000	B4056	2	3,670	No	For stranded Cu-conductors: KRD/KSD, KRT/KST

## Crimp dies for C-sleeves

Supplied in pairs.

For Cu branching with C-sleeve, oval crimping. Only one crimp is required for Cu branches with C-sleeve.

Through conductor mm²	Branching mm²	mm²	Name	Number of crimps	Net weight (kg)	Die holder required
25-300	25-300	Total: 245-425	B40C18	1	4,000	No
150-300	150-300	Total: 450-540	B40C21	1	4.083	No

## **Punch and Matrix**

For Al-terminals, indent crimping.
Use matrix holder **V1471**.
When crimping Al-terminals, two crimps are always required.

Crimp sequence

Stranded Al mm²	Matrix	Punch	Number of crimps	Matrix holder required	Punch holder required
800-1000	W60M	W60D	2	Yes	No
1200	W70M	W70D	2	Yes	No

### Lightweight and versatile designed pumps based on customer needs

#### PS710

The PS710 is an electrically driven pump for crimping with advanced control and monitoring of crimping progress. A flexible system for a wide range of applications with high performance and reliability for professional use. The pump is suitable for cabling manufacturers as well as for fitters working in the field. The PS710 can be used for all types of crimping or cutting. The PS710 has a power source for all types of crimping.

#### Technical data:

- possibility to use different pressure ranges, 0 700 Bar
- can be used with a PC on a computer network with a printer, does not apply to
- oil flow at 20 bar: 0.6 litre/min (PS710D 1.2 litre/min)
- oil volume: 1.0 litre
- oil type: HYDREX MV 22 or similar
- crimps/battery charge: 120 crimps with Cu 150 mm<sup>2</sup>
- ambient temperature: -22 to 55°C
- protection: IP54
- mains operation 85-276VAC 50-60Hz
- Li-ion battery 28,8V, 3,0 Ah
- meet CE requirements: Safety of machinery 2006/42/EC, Electromagnetic compatibility 2014/30/EU, Low Voltage Directive 2014/35/EU, ROHS 2014/35/EU, WEEE 2012/19/EU
- weight approx. 12,4 kg
- compact dimensions 370 x 170 x 280 mm

The pump consists of three basic versions, each with customisation options.

### **PS710D**

• For cabling manufacturers. used with crimping station CS2500

#### **Properties:**

- unique electronic control system together with special PC software
- analysis and process monitoring/control, SPC, for tracking each crimp
- LCD Display with keypad for full status information of pump to the fitter
- communication with PC in real time provides instant quality control
- integrated communication via CAN with Elpress CS2500
- high flow hydraulic pump for fastest possible crimping
- can be used with PC on a computer network with printer

Name	Net weight (kg)	Length mm	Width	Height	
PS710D	12.4	370	170	280	

6:54

Pump PS710D

### **PS710E**

For fitters working in the distribution network or industry.

#### Properties:

- small and light weight, which makes the product easy to use in every situation
- maximum performance, can be used both with Li-ion battery 28.8 V or 220V mains power
- LCD Display with keypad for full status information of pump to the fitter
- able to store and document crimps in the control system
- PC communication via USB
- to be used with crimp heads and cable cutters
- Elpress ergonomic handle ERGOCOM, with wireless communication can be selected for
- charger 230 VAC 50 Hz, 10.8-28.8 V, charging time 65 min

Name	Net weight (kg)	Length mm	Width	Height
PS710E	12	370	170	280

### PS710E251 and PS710E501\*

#### Contains:

- pump E-version
- cable
- hydraulic hose 2.4 m or 5.0 m with wireless communication ERGOCOM
- battery
- charger
- carrying strap
- 110-240VAC 50-60Hz

Name	Gross weight (kg)	Length mm	Width	Height	Note
PS710E251	24,5	370	170	280	PS710E pump with carrying strap. Ergocom hose 2.4 m and power cord EU, battery and charger
PS710E501	26,0	370	170	280	PS710E pump with carrying strap. Ergocom hose 5.0 m and power cord EU, battery and charger
PS710E501-US	26,0	370	170	280	PS710E pump with carrying strap. Ergo hose 5.0 m and power cord US, battery and charger
PS710E251-US	24,5	370	170	280	PS710E pump with carrying strap. Ergo hose 2.4 m and power cord US, battery and charger

ERGOCOM hoses are not available in US/North American market.

## **(E** PS710R

Pump PS710R

For users looking for a reliable standard product (without the need for documented traceability).

#### **Properties:**

- pump control without electronic control system, relay controlled
- easily equipped without data communication
- without battery
- to be used with crimp heads and cable cutters
- Elpress ergonomic handle ERGO, with wired communication can be selected for
- 110-240VAC 50-60Hz

Name	Net weight	let weight (kg) Length mm		Height	
PS710R	12	370	170	280	_

### PS710R250 and PS710R500\*

#### Contains:

- cable
- hydraulic hose 2.4 or 5.0 m with wired communication ERGO
- carrying strap

Name	Gross weight (kg)	Length mm	Width	Height	Note

ERGOCOM hoses are not available in US/North American market

## Hydraulic foot pump

### P4000

#### **Properties:**

- unique version in high strength aluminium alloy
- · ergonomic design
- smooth, anodised (electro-oxidised) surfaces easy to keep clean
- highly efficient, two-stage pump system with fast feed
- single foot-operated pressure relief (tool return) after automatic stop when crimping is complete
- 2.2 m hose with quick coupling
- standard pressure setting 630 bar/63 MPa, (max. setting 700 bar)
- safety valve for return at all pressures
- smooth transport mode for the hose
- special output for pressure monitoring

Name	Net weight (kg)	Length mm	Width	Height
P4000	8,8	500	180	280

### Overhead line connectors

### **System Elpress**

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection will be achieved through the proper handling of our products.

#### Overhead line connectors

The Elpress program for overhead line connectors includes products for splicing copper lines, alloyed aluminium lines type AlMgSi (Super B) and Al59, as well as for FeAl lines. In addition to the wellknown copper and aluminium twist connectors, we also offer LFS and LFEAL contact crimp connectors that are crimped using the Elpress V600, V1300 and V250 systems. The LFS and LFEAL contact crimp connectors and Elpress System have been tested against requirements according to SS 4241241.

### Twist connector for Cu lines 10 - 35 mm<sup>2</sup>

- material copper
- for wire and line, see table
- the joint is rotated so that it is screwed in the opposite direction to the turn of the line

Elpress logotype is included on the marking. Marking XXXX = Year, week. Crimp sequence, see picture.

## Crimp tool for Cu-terminals 10 - 240 mm<sup>2</sup>, Al-terminals 16 - 25 mm<sup>2</sup> (-35 solid) mm<sup>2</sup> and C-sleeves 100 mm<sup>2</sup> (total)

### **V600**

Tested and certified crimp head for crimping Cu-terminals, type KR/KS 10 mm<sup>2</sup>, KRF/KSF 16-150 mm², KRD/KSD 16-185 mm², KRT/KST 10-240 mm², Al-terminals 16-25 mm² (-35 solid), C-sleeves 6/6-50/50 mm², DIN 46235 10-95 mm².

Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

#### **Properties:**

- working pressure 63 MPa (630 bar)
- crimp force 55 kN
- robust fabric bag with room for 10 dies included

mm² (Cu)	mm² (Stranded AI)	mm² (Solid Al)	Name Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-240	16-25	16-35	V600 Punch, Hexagonal, Oval	2,45	189	74	53

#### Crimp geometries

### V611

Tested and certified hand-held tool for crimping Cu-terminals, type KR/KS 10 mm², KRF/ KSF 16-150 mm², KRD/KSD 16-185 mm², KRT/KST 10-240 mm², Al-terminals 16-25 mm² (-35 solid), C-sleeves 6/6-50/50 mm², DIN 46235 10-95 mm².

#### **Properties:**

- fast-feed to crimp engagement provides short crimp times
- crimp force 55 kN
- · delivered in sturdy textile bag

mm² (Cu)	mm² (Stranded AI)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length	Width	Height
10-240	16-25	16-35	V611	Punch, Hexagonal, Oval	2,6	425	115	53

#### Crimp geometries

Crimp geometries

Tested and certified battery-powered crimp tool for crimping Cu-terminals, type KR/KS 10 mm², KRF/KSF 16-150 mm², KRD/KSD 16-185 mm², KRT/KST 10-240 mm², Al-terminals 16-25 mm<sup>2</sup> (-35 solid), C sleeves 6/6-50/50 mm<sup>2</sup>, DIN 46235 10-95 mm<sup>2</sup>. PVX611DB has an extra battery.

### **Properties:**

- protects against dirt and dust through the closed chassis
- ergonomic design ensures optimum balance in the user's hand
- swivel opening crimp fork
- · crimp force control using pressure monitoring
- one handed operation for easy work
- · LED lighting for easier work
- · fast-forward feeding for more efficient crimping
- display with information about the tool and service intervals
- tested together with Elpress TB dies and KB22/KB25
- crimp monitoring via display when the correct pressure/complete crimping is not achieved (warning light LED and signal)

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height	Note
10-150	16-25	16-35	PVX611	Punch, Oval, Hexagonal	5,50	414	116	75	Charger: 230VAC
10-150	16-25	16-35	PVX611DB	Punch, Oval, Hexagonal	5,85	414	116	75	Delivered with 2 batteries
10-150	16-25	16-35	PVX611-US	Punch, Oval, Hexagonal	5,50	414	116	75	Charger: 115VAC
10-150	16-25	16-35	PVX611-WOBC	Punch, Oval, Hexagonal	3,90	414	116	75	Without Battery/ Charger

Mechanical hand-held tool for crimping Cu-terminals, type KR/KS 10 mm², KRF/KSF 16-95 mm², KRD/KSD 16-120 mm², KRT/KST 10-120 mm², Al-terminals 16-25 mm² (-35 solid), and C-sleeves 6/6-50/50 mm<sup>2</sup>, DIN 46235 10-95 mm<sup>2</sup>.

#### **Properties:**

- · opening for easy die changes and for quick removal after jointing
- crimp force approx. 57 kN
- advanced force ratio for lowest handle force
- easy to work with in confined spaces
- only four die pairs are required to crimp 10-95 mm<sup>2</sup> Cu
- quick feed function
- · delivered in a metal box

mm² (Cu)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

# Accessories for crimping overhead lines with T2600, V600, V611 and PVX611

## Crimp dies for overhead line

For joints on overhead lines AlMgSi (Super B) and Al59, hexagonal crimping. Supplied in pairs.

Die pair TBNP 16-20.

mm² Overhead line	Name	Number of crimps	Net weight (kg)	Note
31 - 99	TBNP16-20	2x5, 2x10	0,135	Used for AIMgSI and FeAI, LFS31, LFS62 and LFS99

# Tools for Cu-terminals 10 - 400 mm², Al-terminals 16 - 400 mm² and C-sleeves 6 - 240 mm² (total area)

### V1300

Tested and certified crimp head for crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm², Al-terminals 16-400 mm² (-240 solid), DIN 46235 10-300 mm², C sleeves up to 240 mm² total area (C95-120). Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

#### Properties:

- working pressure 63 MPa (630 bar)
- crimp force 130 kN (13 tonnes)
- versatile and easy-to-use steel crimp head

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height
10-400	16-400	16-240	V1300	Punch, Hexagonal, Oval	3,46	263	88	75

#### Crimp geometries

### V1311-A

Tested and certified hydraulic hand-held tool for crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm², Al terminals 16-400 mm² (-240 solid), DIN 46235 10-300 mm², C-sleeves up to 240 mm² total area (C95-120).

#### **Properties:**

- fast forward feeding
- crimp force 130 kN (13 tonnes)
- requires low handle force, approx 245 N at max force
- the fork can rotate 180°

mm² (Cu)	mm² (Stranded Al)	mm² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

### Shearbolt terminals for low and medium voltage

Shearbolt terminals	2
Shearbolt connectors 10 - 240 mm² (pre-assembled screw)	
Shearbolt connectors 10 - 630 mm² (reversible screw)	
Filler piece	
Shearbolt terminals 10 - 630 mm² (pre-assembled screw)	
Shearbolt terminals 10 - 630 mm² (reversible screw)	
Screw branch clamps	
Counterhold tool	

#### Shearbolt terminals up to 36 kV

Elpress shearbolt terminals are available as through connectors and terminals for:

- stranded and solid Al and Cu cables
- round cross section 10 to 630 mm<sup>2</sup>
- sector cross section 16 to 240 mm<sup>2</sup>

SL240N-12

The screws used are made of brass, that has the advantage of providing a lower friction compared to aluminium or steel screws. This makes it easier for the user to perform the installation. Installation tools can be a socket wrench or an impact wrench with torque force >100 Nm. We recommend that the fitter uses a counterhold tool to secure the shearbolt terminal more easily when tightening the screws.

#### Handles multiple area steps

The advantages of shearbolt terminals are that installation can be done easily without any heavy special tools and that they can manage several area steps in the same through connector/terminal, for example 10-50 mm². The user gets a reduced range of products and a flexible solution.

Shearbolt terminals are made of hardened aluminium with an alloy that allows both copper and aluminium cable to be joined, while preventing the occurence of galvanic corrosion. To reduce the number of terminal variants, screw terminals are supplied with reduction washers that allow the use of two different bolt sizes.

#### Shearbolt terminals

Washers are always needed for connecting terminals with screw joints to busbars.

Use a socket wrench to tighten the screws. It is also possible to use an impact wrench.

#### **SC50R50S**

On the SC50R50S through connector, the screws are threaded into the sleeve and can handle all their cable areas on one thread length. SC50R50S is also suitable as a screen connector for 10-35 mm<sup>2</sup> Cu/Al.

Through connector SC50R50S with pre-assembled screws.

#### Labelling

Elpress marking of shearbolt terminals shows logo, product name, cable area (for stranded and solid conductors) and shearbolt installation order. The terminal palm is marked with screw size M-thread for bolted joints.

#### Cat. no. SL70R70S-10-12

SL = Shearbolt terminal

70R = max 70 mm² round conductor

70S = max 70 mm² sector conductor

10-12 = screw size 10 and 12 M thread

#### Cat. no. SC50R50S

SC = Shearbolt connector
50R = max 50 mm² round conductor
50S = max 50 mm² sector conductor

8:2

#### Screw and washer

The following apply for bright galvanized type nuts and screws, with strength class 8.8, used for connecting terminals with Cu and Al palms:

- Always use a torque wrench to be certain the right torque is achieved. Make sure it is calibrated at regular intervals according to the supplier's instructions.
- Use the recommended torque according to the screw manufacturer's instructions.
- Always use a hard flat washer to reduce friction against the connection surface and the edge pressure, hardness min
- · Install as illustrated.

#### Tightening torque

Recommended tightening torque for wet lubricated screws and nuts of bright galvanized zinc type with strength class 8.8 and coarse threaded (normal thread), used with corresponding washer for connection of terminals with Cu- and Al palm. See table in Chapter 12.

### Shearbolt connectors 10 - 240 mm² (pre-assembled screw)

#### **Properties:**

- screw material: brass, for minimum friction
- partition
- pre-assembled shear-off screws for easy handling
- voltage range: 1 kV
- meets the requirements of standard IEC 61238-1
- PEN is a filler piece for use when connecting the cable's copper screen

Through connector SC50R50S with threaded screws.

Cable type round mm²	Cable type sector mm²	Name	Screen conductor	Screen conductor (with filling piece)	d	D	L	Pcs/ pack
10-50	16-50	SC50R50S	10-35		10,7	17,3	62	10

Crimp connectors with heat shrink insulation, 1kV	
Complete joint kit for crimping Al 50-240 mm² 1 kV	-

# Heat shrink connectors - Shearbolt connectors with heat shrink insulation, 1kV

#### Complete kits - click & heat

Complete kits for easy splicing of 1 kV plastic insulated 3-, 4- and 5-conductors.

The kit consists of shearbolt connectors with partition and heat shrink insulation. The connection between the cable and the through connector is done by means of screws in a shearbolt terminal. Insulation is done with suitable heat shrink insulation.

Kit for 5-conductor cable.

#### This is how it works:

- The cable conductor is spliced with a shearbolt connector fitted with torque screws that shear when the correct torque is reached.
- The different phase conductors are insulated with heat shrink insulation of polyolefin.
- The insulation is internally coated with adhesive that melts when heated
- When the adhesive is pressed forward out of the shrunken body, the installation is finished and the joint becomes entirely watertight.
- Sector-shaped conductors do not need to be rounded.
- With the attached filler piece you can easily splice a 3+1 cable to a 4G cable.

Conductors are spliced using shearbolt connectors Tighten the screw using a socket wrench, until it shears in the cut-off groove.

Shrinkage of the insulation is achieved by using heat.

### Shearbolt connectors with heat shrink insulation, 1kV

Kit for splicing 3-, 4- and 5-conductor cable according to IEC 60228. For both Cu/Al solid and stranded conductors.

Cable type round	Cable type sector	Name	Note
10-50	16-50	KSC50N-1-4HS	1 outer jacket, 4 SC50N, 4 inner tubes and abrasive cloth.

# Heat shrink connectors - Crimp connectors with heat shrink insulation, 1kV

#### Complete kits - crimp & heat

Connector kit for splicing 1 kV plastic insulated 4G or 5G cable of stranded Al conductor 16-25 mm², and for splicing or transitioning to Cu 10-16 mm² class 1, 2, 5 or 6.

The kit consists of heat shrink insulation and joint sleeves, which can take a wide range of cable. The concept includes a through connector for transition between the copper cable and the aluminium cable. Used to splice Al cable for lighting and services.

You only need one tool to crimp through connectors and you can choose between a hand tool or a crimp die with an open matrix that fits in Elpress 6-tonne tool systems.

#### This is how it works:

- The conductors are spliced with sleeves AS1625, AKS1625-1016 or KSF16.
- Use Elpress pliers EW EW1025, or TB die pair TBKA9-11.5 with 600 system.
- The inner and outer tubes of the insulation are dimensioned which means they can be easily applied and then shrunk using heat.
- The length of insulation is adapted to safely cover the cable's primary and sheath insulation
- The insulation is thick-walled and coated with a lot of adhesive that makes the joint waterproof and robust in the face of external influences.
- Meets the requirements in SS-EN 50393, EBR KJ 24:89 The through connectors are tested and approved according to EN 61238-1.

Kit for 4G cable.

Kit for 5G cable.

Shrinkage of the insulation is achieved by using heat.

### Crimp connectors with heat shrink insulation, 1kV

Kit for splicing 4- or 5G cable of stranded Al-conductor 16-25 mm² according to IEC60228, and for splicing or transitioning to Cu 10-16 mm² class 1, 2, 5 or 6. Meets the requirements in SS-EN 50393, EBR KJ 24:89

### **Cutting and stripping tools**

#### **Stripping tools**

To strip insulation from cable there are, for example, the Embla, Tor and Oden ranges, that strip from approx. 0.02 mm² up to approx. \$\tilde{Q}\$ 40 mm cable. The tools are characterised by high precision, ergonomic adaptation, user friendliness and reliability.

EMBLA, ergonomically adapted cutting and stripping tool.

The ODEN stripping tool can be used in one easy operation.

#### **Cutting tools**

Tools are available in several variants for cutting Cu and Al cable up to approx.  $\emptyset$  85 mm. In addition to the simplest mechanical tools that cut cable up to  $\emptyset$  20 mm, there is a wide range of hydraulic tools for cutting cable up to approx.  $\emptyset$  85 mm.

The size of the conductor that the tools can handle mainly depends on the type of conductor to cut; whether it is a low or medium voltage cable and whether it is, for example, a solid Class 1, flexible Class 5 or stranded Class 2 conductor. The hardness of the conductor's material also affects the results. For example, the PKL54C is capable of cutting type Cu FKKJ 4 x 95 mm² low voltage cable or Al AKKJ 4 x 240 mm² or medium voltage cable type Al AXLJ 3 x 150 mm². The insulation takes some space on the medium voltage cable, which is why it can be restrictive.

Battery powered cutting tool PKL54C.

#### Tools for PEX cable

For preparation of medium voltage cables, 12-24 kV, and removal of conducting layers and PEX insolation, tools FBS1722 and FBS1723 are available.

Stable FBS1722 stripping tool delivers better and smoother results than most other stripping tools.

### Tool for cutting and stripping insulation 0.02 - 16 mm<sup>2</sup>

#### **Properties:**

- cutting capacity (EMBLA S, standard cassette): single core conductor 1.5 mm² (AWG 16), - multi-stranded conductor 10 mm² (AWG 8)
- Versatility: The simplicity and ability to change the stripping cassettes allow stripping of most modern insulation materials. The operating range is the widest found in this type of tool.
- Precision: Fine-adjustment allows stripping of even thin insulation without conductor damage. When stripping is complete, the stripping blades are opened and kept open during the blade return so that the cable can be removed from the tool, easily and without scratches.
- Ergonomics: Specially formulated shape, soft rubber inserts in the fixed handle, low friction, optimized handle width, angled head and low weight ensures comfortable work with the lowest load.
- Long life: Stripping cassettes and cutting blades can be replaced for long tool life
- Reliable: Tested for over 150,000 cycles. Made of high strength plastic with double strength compared to standard PA6 (nylon).

#### **EMBLA**

Stripping and cutting tools.

Embla is available in 3 versions:

#### EMBLA S,

- $\bullet$  with stripping blade, straight blades for PVC insulations 0.02-10 mm  $^2$  (AWG 34-8) EMBLA V,
- with stripping blade, V-shaped blades, for harder insulations 0.1-4 mm<sup>2</sup> (AWG 28-12) **EMBLA 16**,
- with stripping blade, oval-shaped blade, for 4-16 mm<sup>2</sup> (AWG 12-5)

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,02-10	34-8	EMBLA S	0,184	191	123	20
0,1-4	28-12	EMBLA V	0,18	191	123	20
4-16	12-6	EMBLA16	0,182	191	123	20

### **EMBLA** (right-angled handles)

Stripping and cutting tools with right-angled handles.

mm²	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,02-10	34-8	EMBLA RA S	0,136	144	168	23
0,1-4	28-12	EMBLA RA V	0,136	144	168	23
4-16	12-6	EMBLA RA 16	0,136	144	168	23

web: www.etechcomponents.com

EMBLA S-cassette

**EMBLA V-cassette** 

EMBLA 16-cassette

### **Accessories EMBLA**

EMBLA and EMBLA RA can be supplemented with the following stripping cassettes for different types of cable sizes and insulation. The cassettes can be quickly and easily changed.

#### EMBLA SP S

- $\bullet$  with stripping blade, straight blades, for PVC insulation 0.02-10 mm² (AWG 34-8)  $\bf EMBLA~SP~V$
- $\bullet$  with stripping blade, V-shaped blade, for harder insulation 0.1-4 mm² (AWG 28-12) EMBLA SP 16
- with stripping blade, oval-shaped blade, for 4-16 mm² (AWG 12-5)

mm²	AWG	Name	Net weight (kg)
0,02-10	34-8	EMBLA SP S-CASSETTE	0,002
0,1-4	28-12	EMBLA SP V-CASSETTE	0,002
4-16	12-6	EMBLA SP 16-CASSETTE	0,002
4-10	12.0	LIMBLA 3F 10-CASSETTE	0,002

### Tool for stripping insulation on cables Ø 2.5 - 40 mm

Three stripping functions.

#### **TOR**

Cable stripping tool for cable insulation Ø 4.5 - 40 mm

#### **Properties:**

- two interchangeable hooks for different cable diameters
- locked positions for cross, longitudinal and spiral sections
- stripping: cable diameters 4.5 40 mm, insulation thicknesses up to 4.5 mm

Max ø conductor	Name	Net weight (kg)	Length	Width	Height
4,5-40	TOR	0,206	150 (167)	42 (52)	31 (31)

Dimensions: Small hook / (large hook)

ODEN strips signal, telephone, audio, instrument, data

### **Accessories TOR**

mm²	AWG	Name	Net weight (kg)
4,5-40	11-1	TOR SP KNIFE	0,001
20-40	4-1	TOR SP BIG HOOK	0,04
4,5-25	11-3	TOR SP SMALL HOOK	0,04

#### **ODEN**

Stripping tool to strip insulation from cables  $\emptyset$  2.5 - 11 mm. Used for signal, telephone, audio, instrument, data cable and similar.

#### **Properties:**

- fine-adjustment and adjustment are performed with a nine-position setting wheel
- stripping: cables Ø 2.5-11 mm, up to 1.0 mm thick outer layers
- flexible: strips or removes the outer layer on most multi-conductors and optical cables up to Ø 11 mm

Max ø conductor	Name	Net weight (kg)	Length	Width	Height
2,5-11	ODEN	0,043	91	40	19

### **Accessories ODEN**

Name	Net weight (kg)
ODEN SP KNIFE	0,0001

# Tool for cutting and stripping conductors 0.5 - 6 mm<sup>2</sup> and cutting up to Ø 20 mm<sup>2</sup>

#### **SCT001**

Stripping and cutting tool for cutting and stripping conductors 0.5 - 6 mm<sup>2</sup>.

#### **Properties:**

- material: high-quality steel
- cuts 0.5-6 mm² (20-10 AWG)
- strips 0.5-6 mm² (20-10 AWG)
- light and versatile
- lockable setting

mm²	Max ø conductor	AWG	Name	Net weight (kg)	Length mm	Width	Height
0,5-6	2	10-20	SCT001	0,102	140	65	10

#### **CT10**

Cable cutter for cutting cable up to approx. Ø 10 mm.

#### **Properties:**

- cuts Cu and Al cable up to approx. Ø 10 mm
- not intended for cutting steel
- small and manageable
- tempered forged steel cutting blade
- design of the blade inserts provides a clean cut surface

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height
10	CT10	0,16	165	50	15

#### **CT20**

Cable cutter for cutting cable up to approx. Ø 20 mm<sup>2</sup>.

#### Properties:

- cuts Cu and Al cable up to approx. Ø 20 mm
- not intended for cutting steel
- sturdy and comfortable handle grip
- tempered forged steel cutting blade
- design of the blade inserts provides a clean cut surface

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height
20	CT20	0,471	240	78	21

**All Enquiries:** 

#### UP-B41

Cable cutter for cutting cable up to approx. Ø 15 mm.

#### Properties:

- cuts multi-stranded Cu and Al conductors.
- not intended for cutting steel
- small and manageable
- high quality, professional tool
- design of the blade inserts provides a clean cut surface
- minimal power requirement

mm²	Max ø conductor	AWG	Name	Net weight (kg)	Length mm	Width	Height
95	15	4/0	UP-B41	0.357	255	25	70

### Tool for cutting cable up to Ø 80 mm

Not for steel wire and wire reinforced cable.

#### HKS34

Cable cutter for cutting cable up to approx. Ø 34 mm.

#### **Properties:**

- cuts normal types of Cu and Al cable
- cuts alloyed AC overhead line and BLX up to a diameter of 241 mm² (not FeAl)
- comes with durable textile bag

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height	
34	HKS34	0.908	350	185	60	

Cable cutter for cutting cable up to approx. Ø 50 mm.

Cutting tool for steel and Cu/Al cable with interchangeable blades. HKS50 is supplied with universal blade UFE1 for Al/Cu, FeAl line, flexible steel line and anchoring cables.

Comes in a sturdy textile bag with instructions for use and cleaning tool for threads.

#### **Properties:**

- scissor-motion for the best cut surface on the cut cable
- single-handed operation facilitates installation
- reliable and proven ratchet function
- move blades easily and quickly by releasing two screws
- clearly marked usage area on the blades

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height
50	HKS50	1,443	350	185	60

### Blade for HKS50

Max ø conductor	Name	Net weight (kg)	Application
50	UFE2	0,13	For Cu/Al, flex. steel line, INOX, FeAl line, screw, anchoring cable, piano wire and solid Cu overhead line.
50	UFE1	0,104	For Cu/Al, flex. steel line, INOX, FeAl line, screw, anchoring cable and solid Cu overhead line.
30	UFEB	0,111	For Cu/Al, flex, steel line, FeAl line and mainly used for cutting data/signal cable.
50	UFE	0,104	For Cu/Al cable, clean cut surface and adapted for most flexible cables. Not suitable for cutting steel.

#### HKS62

- cuts normal types of Cu and Al cable
- cuts alloyed AC overhead line and BLX up to a diameter of 241 mm<sup>2</sup> (not FeAl)
- comes with durable textile bag

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height	
62	HKS62	2,005	350	185	60	_

Cable cutters for cutting cable up to approx. Ø 80 mm.

- cuts normal types of Cu and Al cable
- comes with durable textile bag

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height	
80	HKS80	3,199	585	215	65

### Stripping tool for removing layers of PEX cables Ø 10 - 50 mm

#### FBS1722

Stripping tool for fixed, outer conductive layers on PEX cables.

#### Properties:

- FBS1722 contains the stripping tool, 100 g silicone paste and instructions for use, in a padded plastic box
- insulation can be stripped from Ø 10 to Ø 50 mm, which corresponds to up to 800 mm² at 12 kV, 630 mm² at 24 kV and 500 mm² at 36 kV
- the depth of cut is set between 0 and 1.2 mm in 0.1 mm increments using a knoh
- stripping can be done up to 25 mm from the edge of the screening and the PEX surface becomes very even
- the blade is hardened, min HRC 55, and specially ground, as well as very easy to replace

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height
10-50	FBS1722	0,813	235	200	55

FBS1722 comes with box, silicone paste and instructions for use.

### **Accessories for FBS1722**

Spare parts for the FBS1722 stripping tool. RS = spare blade and SP = silicone paste.

Name	Net weight (kg)			
FBS1722RS	0,006			
FBS1722SP	0,115			

### Stripping tool for PEX insulation on medium voltage cable

### $\epsilon$

#### FBS1723

Stripping tool for stripping PEX insulation on medium voltage cable.

#### **Properties:**

- FBS1723 contains the stripping tool, 100 g silicone paste and instructions for use in a padded plastic box
- the tool is easy to use rotate the tool with the handle
- stripping can be done from Ø 15 to 52 mmm which corresponds to cable 12 kV 50-1000 mm², 24 kV 25-1000 mm², 36 kV up to 630 mm² and 52 kV up to 500 mm²
- depth of the blade can be adjusted from 0 to 15 mm
- unlimited stripping length
- the cutting blade is available as a spare part
- adjustable feed in 5 positions, the blade is hardened, min HRC 55, and specially ground and very easy to replace

FBS1723 comes with box, silicone paste and instructions for use.

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height
15-52	FBS1723	1,072	275	220	65

### **Accessories for FBS1723**

Spare parts for the FBS1723 stripping tool. RS = spare blade and SP = silicone paste.

t weight )	Name	
01	FBS1723RS	
15	FBS1722SP	
01	FBS1723RS	

### **Battery-powered cable cutter**

Battery powered cutting tool PKL54C.

Electric cable cutter for cutting Cu and Al cable, max. cutting diameter 54 mm.

#### **Properties:**

- not intended for cutting steel
- comes in a bag with Li-ion battery, 14.4 V, as well as charger
- tool performs a scissor motion when cutting that provides an optimal cut surface
- built-in fuse as a surge protector
- CE-marked

Max ø conductor	Name	Net weight (kg)	Length mm	Width	Height	Note
54	PKL54C	0,001	338	220	120	Charger: 230VAC
54	PKL54C-US	0,001	338	22	12	Charger: 150VAC
54	PKL54C-WOBC	0,001	338	22	12	Without Battery/Charger

## Hydraulic hand-held cable cutters and cable cutter heads

KL2585

Hydraulic cable cutting head for copper and aluminum cable.

#### **Properties:**

- cuts up to  $4 \times 150 \text{ mm}^2$  Cu conductor and  $\emptyset$  85 mm Al, paper and plastic insulated conductors (there may be restrictions depending on the conductor's design and materials)
- cuts steel-reinforced cables, but not steel wire-reinforced cables
- used with foot pump P4000 or electrically powered pump PS710
- supplied in plywood box

mm²	Max ø conductor	AWG/ MCM	Name	Net weight (kg)	Length mm	Width	Height
630	85	1000	KL2585	10,35	250	377	75

 $\epsilon$ 

HKL40, KL40. HKL55 and KL55

### Do no cut wire reinforced cable.

HKL85 and KL85

### HKL40/KL40, HKL55/KL55, HKL85/KL85

A series of cable cutters covering almost all needs when cutting power cables and lines. The cutter heads (KL) are operated with one of Elpress' pumps, e.g. foot pump P4000 or pump PS710.Not for steel wire and wire reinforced cable.

Max ø conductor	Name	Net weight (kg)	Length	Width	Height

### Deep earthing system

#### **Benefits**

Elpress systems for deep earthing have many advantages:

- The ground line has no joints no risk of contact failure.
- Tip and leading rod are manufactured for a large area range; 16 - 95 mm<sup>2</sup>.
- Can be used for different types of line e.g. soft or hard copper, galvanized or stainless steel.
- When copper line is used, the extension rods act as sacrificial anodes and provide good protection against corrosion.
- Full control over the line and tip is maintained and it is possible to continuously measure the earthing resistance.
- Thanks to the few components of the system, driving is both uncomplicated and reliable.
- The system has a low overall weight compared to other systems.
- The overall cost of a complete earth connection will be lower than that made in a conventional manner.
- Rod length 800 mm for best ergonomics.

Radio base station is an application for Elpress deep earthing systems.

#### Theory

Elpress' approach is an earthing system without joints. The electrode consists of a copper line that is driven down by a system consisting of 0.8 m long steel rods. A hardened steel tip paves the way for the ground line that is inserted into the steel tip and clamped by the leading rod. For every 0.8 m length of driven line and rod, an extension rod is pushed into the preceding rod. Because the earthing resistance can be continually measured at the other end of the line, one can stop driving when a suitable value is reached and the last extension rod is then

Driving takes place with the aid of a power hammer with an adapted driving sleeve or a sledge hammer and impact

Impact sleeve FS62C

#### Service life

Elpress deep-earthing system consists of steel rods and a copper line. The steel rods act as sacrificial anodes with relatively high corrosion current against the copper electrode (cathode).

This combination of metal both stabilises and equalises its surroundings. If a lead sheathed cable is located in the soil a few metres from the earth connection, the corrosion current from the lead anode to the Fe+Cu earth connection is 40% less than the value of an earth connection without FE rods. In other words, the lead sheath has a theoretical service life of almost double.

Experiments have shown that after a few months, the corrosion current drops to virtually zero. The explanation is that a special layer – the polarization layer – is formed next to the electrode. The current is thereby reduced and thus also the corrosion. The amount of the reduction depends on the properties of the soil. An AC load should theoretically counteract the corrosion. This means that the practical service life is often longer than the theoretical.

### Structure and operation of the system

### Elpress systems consist of the following 5 parts:

- · hardened steel tip
- leading rod
- extension rod
- driving sleeve/impact sleeve
- earth line (not supplied by Elpress)

#### This feature is simple

- the earth line is inserted into the hardened steel tip and clamped by the leading rod.
- the extension rods are fitted with a guide pin, which during work is pushed into the preceding rod.
- earthing resistance can be measured continuously. When the appropriate value is reached, driving is interrupted and the last extension tube is withdrawn (and can therefore be reused).

#### **Practical advice:**

1. Plan the earth connection. What are the soil conditions? Normal and loose soil - steel pipe Ø 17 mm is sufficient.

Hard and rocky soil- steel rod Ø 21 mm (type HD) should be used. Is a parallel earth connection possible?

- 2. Determine the soil resistivity. Based on that and the maximum earthing resistance it can be estimated how much line is needed.
- 3. Start the driving by locking the line into the hardened tip with the leading rod. 16 mm² line should be folded double before the tip is attached. In loose soil, a sledgehammer and impact stud is sufficient. In heavier soil/at greater depth, a power hammer should be used. NOTE: Do not rotate the driving sleeve during the work.
- 4. Make sure that the line maintains the same speed down into the soil as the rod. If it does not, there are the following possibilities:
- more rods than line required; the rod may have been bent and then runs parallel to the surface of the soil and the line does not follow the pipe through the ground.
- the rod continues and the line stops; the line has come loose and can be pulled up or the tip has folded.
- both stop; stone or rock has been found. If the stone does not shatter after about 10 seconds, you must start over.

In the event of interrupted driving, start again at a distance at least 1.5 times the line length already driven down.

5. Preferably measure the earthing resistance continuously while driving down the earth line. Arrange a parallel earth connection if necessary. Splicing and branching of the earth line is contact crimped by means of Elpress through connectors or branching sleeves and tools.

1. Resistivity in different soil conditions.

2. Measurement of ground resistance.

3. The earth line is locked to the hardened steel tip with the leading rod.

Driving starts.

### Deep earthing system FS

Elpress deep-earthing system FS consists of 3 parts. Tip (FS1x), leading rod (FS2x) and extension rod (FS3x).

mm²	Name	Net weight (kg)	Length	Pcs/pack
16-70	FS11	0,176	135	5
70-95	FS12	0,176	135	5

Steel leading rod, equipped with a grooved notch to lock the earth line effectively. For loose and normal soil conditions.

Ø	Name	Net weight (kg)	Length	Pcs/pack
17	FS21	0.644	800	5

### FS31

Steel extension rod, HD, equipped with a guide pin that fits inside the preceding rod. For loose and normal soil conditions.

ø	Name	Net weight (kg)	Length	Note	Pcs/pack
17	FS31	0.804	870	Length incl. driving can	5

### Deep earthing system FSHD

Elpress deep-earthing system with thicker rods for tougher soil conditions FSHD (HD: "Heavy Duty") consists of 3 parts. Tip (FSHD1x), leading rod (FSHD2x) and extension rod (FSHD3x).

### FSHD11

Hardened steel tip intended for hard and rocky ground. Used in conjunction with leading rod FSHD23.

mm²	Name	Net weight (kg)	Length	Pcs/pack
25-70 (95)	FSHD11	0.254	153	5

### FSHD23

Steel leading rod, equipped with a grooved notch to secure the earth line effectively. Designed for hard and rocky ground.

Ø	Name	Net weight (kg)	Length	Pcs/pack
21	FSHD23	1,088	800	5

### (F FSHD31

Steel extension rod, HD, equipped with a guide pin that fits inside the preceding rod. Robust rod intended for hard and rocky ground.

Ø	Name	Net weight (kg)	Length	Note	Pcs/pack
21	FSHD31	1.224	870	Length incl. driving cap	5

### Accessories for Elpress deep-earthing systems

## **CE** Withdrawal handle FS

Pull handle with grip-friendly design that facilitates withdrawal and allows reuse of the last extension rod FS3x/FSHD3x.

Ø	Name	Net weight (kg)	Length mm	Width	Pcs/pack
18,5/22,5	FS41	0,403	230	60	1

### (E Impact sleeve FS

Impact sleeve used when driving using a sledgehammer, or similar, to prevent deformation of the rod end. Specially designed for use with FS21 or FS31 rods.

Name	Net weight (kg)	Length mm	Width	Pcs/pack
FS62C	1,018	110	45	1

### ( Impact stud FS

Impact stud used when driving using a sledgehammer, and similar, to prevent deformation of the rod end.

Name	Net weight (kg)	Length mm	Width	Pcs/pack
FS61	0,081	58	22	1

## ( Impact sleeve FSHD

Impact sleeve used when driving using a sledgehammer, or similar, to prevent deformation of the rod end. Specially designed for use with FSHD23/FSHD31

Name	Net weight (kg)	Length mm	Width	Pcs/pack
FSHD62C	0.93	110	45	1

### Driving sleeves for FS and FSHD deep-earthing systems

- specially designed for use with the FS21 and FS31 rods
  protects the end of the rod from deformation when driving with a power hammer
  for FS-type rods with an external diameter of 17 mm

### System structure and function - deep earthing

#### **Earthing**

An earth connection is a conductor placed in the soil, with the aim of diverting electrical current from an installation connected to the earth connection and into the surrounding soil.

A customer who buys power takes earthing for granted. This is despite the fact that the use of power without, or with poor, earthing incurs great risks. All power suppliers must have approved earth connections at their installations. This means that voltage surges that can occur for various reasons are led into the ground so that they do not cause damage. Earthing thus functions as, among other things, personal protection, property protection, signal transfer protection, lightning protection and the like.

An approved earthing should have: (1) low electrical resistance, (2) ability to conduct voltage stably (despite weather changes) and (3) long service life, i.e. good resistance to corrosion.

Soil conditions or external conditions? The importance of the soil as a conductor of electric current is great. The technical specifications and requirements for earthing demonstrate the advantages of deep-earth connections, both as a technical and economic solution, in relation to

surface-earth connections.

Current conduction occurs in the soil through electrolytic processes, known as ionic conduction. Solid particles such as gravel are not usually conductive.

The electrical conductivity of the soil therefore mainly depends on the proportion of saline water bound by capillary forces and osmotic pressure in the pores between grains of sand and in hygroscopic humus particles (e.g.clay).

The water in deeper lying ground layers usually has a higher salinity than the water in the surface layer. The higher the moisture content of the soil, the better the conductivity. Soil humidity normally varies between 5-40%. At variations below 14-18%, conductivity deteriorates significantly.

Cold (frost) significantly impairs the ground's conductivity. It is of great importance that all this is taken into account for earth connections or earth connection systems.

Weather conditions - cold, heat, rain and wind - mainly affect the upper layer of the soil (0 - 1.5 m), which therefore exhibits the most powerful variations. The most efficient earthing is thus reached when the electrode is placed deep enough so as not to be affected by changes in soil humidity and temperature.

Soil resistance in relation to temperature.

Soil resistance in relation to humidity.

Resistivity in different soil conditions.

#### Resistivity

The electrical properties of the soil are quality declared by means of its resistivity, which is measured in  $\Omega m$  (former unit  $\Omega cm$ ,  $1 \Omega m$  =100  $\Omega cm$ ). Soil with good electrical conductivity thus has low resistivity: 10 - 100  $\Omega m$ .

For each case of different soil type, soil resistance must be measured and preferably during several seasons and in different weather conditions. In measurement today almost exclusively voltage compensated electronic resistance bridges are used (measurement method according to Wenner) with 4 connection contacts, 2 of which are for current electrodes and 2 for voltage probes.

The connectors are connected to 4 vertical metal tips that are driven down in a row about 0.3-0.5 m deep a metre apart. (See image)

If the instrument reading is R, the resistivity of the soil is calculated according to the following equation:

 $p=2\ x\ a\ x\ R\ \Omega m$  In unlayered soil, resistivity is independent of the electrode distance a. By increasing distance a, the current penetrates deeper into the ground and the measured resistivity can fall or increase depending on the resistivity of the ground layer at 1 metre's depth. When calculating approximate earthing resistance of the earth connection when the depth is I, the resistivity of the soil must be measured with electrode distance a  $\approx$  0.75 x l.

Measurement of ground resistance.

Measuring earthing resistance of the earth connection

#### **Earthing resistance**

Due to the high resistance of the soil ( $109 \, x$  resistivity metal) at current bleed in the soil a strong electrical field is formed in the earth connection, which diminishes in strength with distance from the earth connection. At a certain distance, this field can be neglected (removed earth).

The earthing resistance of the earth connection is usually measured with the same type of instrument used to measure the resistance of the soil. However, this measurement requires only one voltage probe and a current electrode (auxiliary earth connection). The location of probes and electrodes varies between different measurement methods. The two methods that follow are a method of accurate technical measurement and a more practical, simplified method.

Measuring earthing resistance of the earth connection - Method 1

#### Method 1

(acc. to the lightning protection standard SS 4870110). This method has a measurement error of +/ - 2%.

The summary gives this method:

- The probe and auxiliary electrode are placed in a straight line from the earth connection to be measured as illustrated.
- If the ground is layered, measurement should be carried out in two directions. The largest value is used.
- The reliability of the measurement result depends on the location of the probe/ auxiliary electrode. Note the distance table below. These provide normally acceptable measurement accuracy.

earth connection - probe = 0.5a-0.6a earth connection - electrode = a

a ≥ 40 m if l ≤ 4 m

a ≥ 10 x l if l > 4 m

Measuring earthing resistance of the earth connection - Method 2.

#### Method 2

(acc. to EBR-standard U2:80)

This method normally has a measurement error of more than 2%, but practically is easier to perform than Method 1.

The summary gives this method:

- Probes and electrodes are placed as illustrated, 90° from the main direction of the earth connection.
- The position of the probe/electrode is equal when measuring both an individual earth connection as earth connection system, i.e. at least 80 m from the earth connection.
- Measurement of an earth connection is carried out with an open earth conductor clamp.
- Measurement of the resulting transition resistance on multiple earth connection systems is carried out with the clamp closed and with the measuring line connected on the top of the earth conductor clamp. With the help of the conductivity and the maximum earthing resistance, which is required by, among other things, the high current regulations, it is possible to estimate how much line may be needed according to the formula:

$$I = p / R$$

I = length in metres

p = soil resistance in ohmmeter

R = earthing resistance in ohms.
In the discussion of the advantage of deep-earth connections compared to

deep-earth connections compared to surface-earth connections, it should be mentioned here that the earthing resistance of a horizontal surface-earth connection is twice that of a similar line length in a deep- earth connection, i.e.

$$R0 = 2 \times p / I$$

#### Parallel connection

Parallel connection of several earth sockets is often necessary for practical reasons to achieve a sufficiently low value of earthing resistance during earthing. In order to limit reciprocal connection between individual earth connections, deep-earth connections shall be installed a distance apart of 1.5 times the depth of the earth connection I. Resulting earthing resistance:

$$Rres = k \times Rm$$

where Rm is the mean of the resistance value of the earth connection and k a reduction factor, the value of which is obtained from the following table.

obtained from the following table. No. of parallel earth connections k for a = 1.5l

0.60

Parallel connection.

From economic aspects it can be pointed out that the diameter of the earth connection has a negligible role when calculating the earthing resistance in deep earthing. This means that when using Elpress deep-earthing systems with copper line, the cost will be lower than when using, for example, conventional systems. What is important in practice in terms of the cable diameter is what currents the system is dimensioned for and what rules and requirements apply.

Examples of applicable requirements: the lightning protection standard states Culine min 25 mm², EBR prescribes min. Cu-line 35 mm² for earth connections in overhead line networks and min. 50 mm² for earth connections in ground cable networks.

#### Corrosion

The service life of an earth connection depends on its resistance to corrosion (rust). The prerequisite for all types of corrosion is an electrolyte fluid that allows the transport of positive metal ions from anode to cathode. At the anode, metal atoms are dissolved in the electrolyte, forming free positive ions - oxidation- and at the cathode these ions are neutralized and deposited on the metal surface - reduction.

In galvanic corrosion caused by contact between two metals, the corrosion rate is proportional to the galvanic tension between the metals. A base metal has higher negative potential than a nobler metal and therefore forms the anode in a corrosion process.

There is also a clear correlation between the corrosion rate and ground resistance. The rate of corrosion depends on the composition of the soil. Influencing factors are the pH of the soil, temperature, oxygen content, moisture content and resistivity. These factors affect the corrosion current lk, which is directly proportional to the rate of corrosion. Ik can be determined by direct measurement with an Ammeter or calculated, if the transition resistance Rö between the two electrodes is known, according to formula:

lk = Ug / Rö

Ug = galvanic voltage

In some cases, Rö can be measured with a resistance bridge of the same type used to measure the earthing resistance of an earth connection. The rate of corrosion is often expressed in  $\mu m/year$  where 1  $\mu m$  represents 1/1000 of 1 mm and denotes the thickness of the corroded away outer metal layer for 1 year. The table below indicates some practical values as guide values for different soil resistivity.

Resistivity	Corrosion
p < 1 Ωm	100 μm/year
p < 1-10 Ωm	100-30 μm/year
p < 10-100 Ωm	30-4 μm/year
p > 100 Om	negligible

# Some important comments on contact crimping

#### **About System Elpress**

There is a wide range of electrical terminals today, and it can be difficult to know if you have chosen the right solution for your installation.

A first step is to ensure that a system is chosen, consisting of terminal, tools and a standard conductor.

In order for this combination of material to be classified as a system, there must be common test documentation, a type test according to a standard relevant to the material.

There may also be a need to identify the correct terminal depending on the cable class. Cables are divided into different classes depending on their structure. With System Elpress you get a complete solution, KRF/KSF in combination with Dual can be combined with all Cu cable classes. Elpress systems for aluminium indented crimping are a robust solution that can be used with all types of Al

Not choosing a system carries great risks. All terminals are designed with respect to a specific tool system. Small differences in dimensions of terminals and tools can lead to serious consequences, such as hot running or fire.

#### **Terminals**

Elpress terminals have been developed over 60 years of continuous work to always meet the highest standards. Our terminals are designed to be able to operate at a continuous temperature of 90°C and to always be able to carry the same load that the relevant cable area can handle.

This means, among other things, that tubes for our KRF/KSF are dimensioned to be adapted to the cable's conductivity. This type of terminal should be crimped with a hexagonal geometry that provides a symmetrical shape that distributes crimp force evenly and ensures that thin strands are not damaged shortening the lifetime of the connection.

Our aluminium terminals are designed according to the same criteria and requirements as mentioned above, and should be crimped with a punch tool that ensures that the aluminium insulating oxide layer is broken and that good points of contact are created between conductors and terminal.

#### Cables

Elpress terminal systems are designed to be used in conjunction with cables according to IEC 60228. This is an international standard used all over the world and describes the structure and conductivity of a cable  $(\Omega/km)$ The norm divides cables into classes as shown below.

Class 1 conductor

Class 5 Flexible conductor

Class 2

Types of conductor

Cables in each class shall have mechanical and electrical properties that meet the requirements of the norm, which means that they can be used with System Elpress without special adaptation. In addition to the classification of conductors, the differences between cables are mainly in the design of the insulation.

Hexagonal crimping.

Indented crimping.

#### **Trained users**

Another important aspect of a system is a knowledgeable and trained operator. Good and safe work requires knowledge of materials, regulations and the importance of using a system solution. We offer company-adapted training that includes both theoretical and practical parts.

# Standards for contact crimping

Standards for electrical terminals

standardisation within the electrical area

SEK Svensk Elstandard is appointed by the government to be responsible for all

The Standards are established mainly

collaborations within the International

Electrotechnical Commission (IEC) and

CENELEC (Comite' Européen de Normali-

sation Electrotechnique). SEK represents

and coordinates Swedish companies and

These standards are available on the SEK

through international and European

in Sweden.

authorities.

SEK - Svensk elstandard, https://elstandard.se/

IEC, https://www.iec.ch/

website. There are also manuals that show regulations and recommendations for different types of installations. For type testing of electrical terminals, the current standard is IEC 61238-1-1, it supersedes all national standards. It has been active since 1993 and was last updated in 2018 and is thus the standard that best meets the requirements that can be imposed on today's installations. In addition to this, there are a large number of more industry-specific standards for railways or switchgear where, in addition to the requirements of IEC 61238-1-1, there may be a need for vibration and environmental testing.

#### Tests against standard

Many existing products for electrical terminals are older than IEC 61238-1-1, this does not mean that they have to be retested against the new standard to be acceptable, the standard they were tested against at launch applies. This is rarely a problem as they are likely to be used in installations of the same age. In newer installations with higher demands on current and temperature, it is important to choose materials tested according to current standards.

## Crimp results

For a good crimp result, you have to ensure clean conductor surfaces, without visible oxide lavers.

A good cable stripper guarantees clean stripping without damage to individual strands, follow Elpress instructions for stripping lengths.

Crimping tools should be checked before starting work, to avoid the risk of injury and to ensure a good result.

The crimp dies are the key to a successful crimping process, whether they are hydraulically or manually operated. It very important that all tool parts are kept dry and clean and that they are regularly checked for damage. Damage and/or contamination of tool parts can lead to a deterioration in the end result and shortened tool life.

# Use and safety instructions

#### Instructions and directions

Elpress hydraulic and mechanical tool systems are some of the safest on the market. Safety requires that instructions and directions are available and followed closely. Each Elpress tool is therefore accompanied by detailed instructions on how to use the tool. These instructions should be read carefully before use, in the best interests of the operator.

#### Correct use of the tools:

- increases productivity
- increases tool life
- ensures the quality of work done
- · minimises the risk of accidents

#### Safety rules

Below are some simple and common rules that we at Elpress recommend all operators to follow:

- Before starting work with a crimp tool, a thorough visual inspection should be carried out. Pump, crimp head, forks, couplings, hoses and other accessories must be checked to ensure that they are faultless and clean. The correct placement of the inserts in the forks should also be checked before starting work.
- All operators must wear personal protective equipment such as A51 gloves, goggles and safety shoes.
- Hydraulic pressure must not be applied to a hose that is heavily bent or knotted. The hose is made for particularly high pressure and cannot be replaced by another type.
- Hydraulic tools must never be carried in the hose or coupling.
- Operate with caution, do not drop heavy objects on the hydraulic hose.
   This can damage the steel reinforcement and cause leakage. If leakage occurs, oil under high pressure may come into contact and penetrate the skin resulting in internal injury. If this happens, contact a doctor immediately.
- The tools must be serviced and calibrated at regular intervals.
- Make sure that the correct tool or tool insert has been selected for the terminal and conductor to be crimped.
- Check that the installation is unpowered before carrying out work. The tools are not designed for "Live working".
- Keep in mind that there is very high crimp pressure during work. Therefore, never stand in front of a tool in the direction of crimping force.
- Pay attention to the risk of crushing and cutting injuries during work. This applies to all types of crimping tools and cable cutters.
- If there is a suspicion of failure of a crimp system, always contact the Elpress Service Centre.

#### Check of crimping results

In order to ensure that the tool has achieved the predetermined shape change for each cable terminal, the crimp result shall be measured. This shape change provides both mechanical strength and good electrical properties.

### **Hexagonal crimping**

For **terminals** and **through connectors** of copper the following applies:

- The "N" dimension is checked in the direction of the crimp.
- Measure with calipers and compare with the table's "N" dimensions.
- If the measurement result exceeds the "N" dimension (according to the table that follows) after correct contact crimping, contact the Elpress service centre.

## **Oval crimping**

For Cu branching sleeves, the "h" dimension must be checked. This is done at the maximum height of the crimped oval, preferably with calipers. The measurements are compared to the table below. If the "h" measurement is exceeded, after a contact crimping, contact the nearest Elpress service centre. See measurement points on the image below.

# Crimp die table type C sleeves (H-dimensions)

C-die No.	Sleeve	max h mm
5	C6-10	12.5
6	C16-25	15.5
8-9	C25-50	22.0
13	C50-70, C70-95	26.5
15	C95-120	30.8
18	C150-185	44.5
21	C240-300, C23	54.4

# Indent crimping

For Al terminals, the measurement "T" must be checked, which is measured at the bottom of the indent that the punch has achieved on the terminal. This is best done with special calipers, contact Elpress if necessary. Compare measured "T" measurement with table. If the "T" measurement is exceeded, after indented crimping, contact the nearest Elpress service centre. See measurement points on the image below.

# Crimp die table type AK/AS (T-measurement)

# **Bolt joints**

# **Bolt joints**

Users/installers of bolted connectors always have to adhere to, and follow electrical codes and norms in the local region where they are making such installations. The information below is general and hence, should never be seen as an installation instruction. The installation of a terminal with bolt joint for electrical transmission requires special attention. It is important that this is done in a correct manner, as important as the contact crimping at the other end of the terminal as described above. The joint must achieve a sufficiently high clamping force, distributed in a desirable manner and ensure the electrical properties over a very long time under high and varying loads of different characteristics. It is very important to follow the installation instructions. These are based on theoretical calculations, verified tests and experience from field studies. Tightening must be carried out in a controlled manner using torque tools, where the relevant screw is tensioned to the specified torque. The accuracy of the tool is of great importance. The clamping force of a properly tightened screw shall create a contact area large enough to ensure good conductivity, without the risk of overheating. In order for the clamping force to be distributed evenly and create a sufficiently large contact area, hard flat washers must always be used, type BRB HB200 SMS 70, under screw head and nut. See image below. This applies regardless of the hardness of the conductive materials (which are softer than HB200). Otherwise, there is risk of large deformation of the conducting material that reduces the tension, which can increase the risk of inadequate contact area and overheating.

#### **Tension washers**

The use of different types of locking elements or spring washers often increases the risk of settlement. If a spring washer of type DIN 6796, with a very high clamping force, is positioned and secured between e.g. nut and the hard flat washer, it can provide an increased margin towards excessively high settlement. The diameter of the tension washer should be less than or equal to the flat washer's, even after tightening fully. Otherwise, the risk of settlement at the outer edge of the flat washer increases where the clamping forces are concentrated. When using spring washers, 1 is sufficient and it is preferably placed on the opposite side of the terminal.

# Screw Hard plain washer Cable shoe flag Connection bar Hard plain washer with big outer Spring washer DIN 6796 Inot fully tightened on the picture

Bolt joint with spring washer.

# Mounting the terminal against the connection rail

Max. 2 terminals of the same size on the same screw. Current load should be checked.

#### Preparatory:

- Clean contact surfaces from dirt, oxide layers and grease using a steel brush and denatured alcohol. This is especially important for aluminium. Surfaces that are tinned, nickel-plated, silver plated must not be brushed.
- Petroleum jelly or contact grease reduces corrosion risk on cleaned surfaces

#### Fastener selection:

- Screws and nuts of strength class 8.8.
- Greased galvanized screws provide the least dispersion of the pre-tension force.
- Choose stainless A4-80 in environments when there is a high risk of corrosion.

#### Selection of washers:

- Always select hard flat washers of the BRB, HB200 type.
- The tension washer can normally be excluded. If a tension washer of type DIN 6796 is used, it must be placed between the screw head/nut and the flat washer. It must never be placed directly against an electrical contact surface without a flat washer in between. The flat washer must have an external diameter at least as large as the tension washer.
- 1 spring washer is sufficient and it should be placed on the rear of the busbar, between nut and hard flat washer, see diagram.

#### Installation:

- The screws must be tightened with torque tools so that tightening is controlled.
- Torque wrenches must be calibrated regularly. Oil the screw when installing.
   Even if the torque is recorded correctly, the pre-tension force depends entirely on the friction.
- Tightening torque according to the table above. Accuracy better than ±5%.
- The terminal palm and busbar may be of different materials.

Al/Al gives a weaker joint. It is important to clean and use contact grease. Tension washer + flat washer can reduce the risk of settlement.

Ål/Cu gives a higher risk of corrosion and settlement, use contact grease. Cu/Al provides low risk of galvanic corrosion when the rail is made of Al. Cu/CU provides the best joint, good contact and small risk of settlement.

# Recommended tightening torque

Thread	Steel 8.8 *	Steel 8.8 *	Steel 8.8 *	Steel 10.9 *	Steel 10.9 *	Steel 10.9 *	Stainless	* Stainles	s *Stainless *

# Service and maintenance

#### Service and maintenance

Our service department maintains, repairs, checks, calibrates and certifies Elpress tools and power sources. Following a review of the equipment by the service department, certificates are issued that verify the performance of the tools. To ensure that your crimped terminals maintain a high and even level of quality, regular checks shall be done of the crimping tools.

#### We offer:

- Contract preventive maintenance, Elpress Basic and Elpress Advance
- · Calibration of tools
- Repairs (servicing of tools)
- Rental of crimping equipment

#### Preventive maintenance

Elpress service offers a flexible service solution for increased security with fast service and high availability.

Our service agreements are available in 2 levels, Elpress Basic and Elpress Advance. To sign a service agreement with Elpress means the following:

- Planned and preventive maintenance ensures better performance for your equipment.
- Regular service intervals minimise the risk of unforeseen stoppages by indicating any safety or functional defects and recommending measures to avoid these problems
- Regular service intervals are normally implemented every 12 months for a fixed price
- The price is based on the service level and tool equipment.
- A certificate is issued after the equipment has complied with calibration requirements
- Calibration can also be done on-site at the customer

#### **Elpress Basic**

This forms the basis of a service agreement and includes the following points:

- General inspection of the tool
- Safety aspects according to declaration of conformity (compliance with the Machinery Safety Directive, Low Voltage Directive, EMC Directive).
- Function test
- Checking of accessories, e.g. crimp dies
- Issue of Certificate
- The inspection follows Elpress final inspection and acceptance inspection requirements.

#### **Elpress Advance**

Elpress Advance includes:

 Elpress Basic + corrective maintenance Includes calibration with certification and consumables repairs at a fixed price.

# Calibration with certification of tool

Calibration follows the same points and requirements as Elpress Basic, but it is the customer's responsibility to submit the tool for calibration.

# Rental of contact crimping equipment

Sometimes the accumulation of work can be greater than can be expected, or individual projects may require more resources than usual and then it is possible to rent equipment at Elpress. When repairing equipment for a company, Elpress can rent tools to the company if required, until the original equipment is repaired and returned.

## Purchased a new product?

Send the Product registration form to Elpress and Elpress Basic is included for free the first year.

#### Information

More information is available from the service department: https://www.elpress.net/en/products/system-elpress/service/

# **Technical information**

#### **Connecting materials**

Elpress uses copper, brass and aluminium as terminal materials.

The copper and brass products are electrolytically tin plated for increased corrosion resistance. In a bimetal (copper aluminium) terminal, the copper part is untreated.

#### **Brass**

Brass is mainly used for flat pin sleeves in areas up to 6 mm², where good suspension properties are desired.
Brass is an alloy of about 70% copper and about 30% zinc and has very good cold form properties.

#### Copper

The copper used by Elpress for terminals has a purity of at least 99.95 %. Its excellent properties for use in electrical terminals are among the following:

- high conductivity (only silver is better)
- high corrosion resistance
- · good formability
- good sealability

In manufacturing the neck of the terminal element is soft soldered in order to obtain as good form properties and good enclosure around the conductor as possible during the contact crimping. This then provides a terminal that exhibits low transitional resistance and good mechanical properties.

#### **Aluminium**

The aluminium used for through connectors and cable terminals has a purity of at least 99.7 % and its excellent qualities are:

- · low weight
- strong, in relation to its weight
- good electrical conductivity, approximately 60% of the conductivity of copper
- easy to work with

# Conductor design

#### Cable standard IEC 60228 provides:

Information about materials, construction and resistance values for both copper and aluminium conductors.

Class 1 solid conductor

Class 2 stranded conductor

Class 5 flexible conductor

Class 6 highly flexible conductor

# **UL-approved terminals**

UL is a US standard that is also internationally accepted. Elpress standard Cu-terminals type KR/KS, KRF/KSF are UL approved acc. to file no. E205350. Cu-terminals type KRF/KSF are for stranded and flexible copper cable, Class 2 and 5 according to IEC 60228 and have a working range of 1-500 mm².

# MCM and AWG cross-reference table to the corresponding area in mm<sup>2</sup>

MCM No.	Area mm²	AWG No.	Area mm²
250	127	36	0,013
300	152	34	0,020

1300	659	11	4,17
1400	709	10	5,26
1500	760	9	6,63
1600	811	8	8,37
1700	861	7	10,6
1800	912	6	13,3
1900	963	5	16,8
2000	1013	4	21,2
		3	26.4
		2	33.6
		1	42.4
		1/0	53,5
		2/0	67,4
		3/0	85,5
		4/0	107

#### Remarks:

- 1. The information in this table comes from catalogues published by respected cable providers and does not refer to official standards.
- 2. The types relating to AWG vary depending on the different design of the conductors, i.e. the number of strands.

AWG > 20 refers to single strand conductors.

AWG ≤ 20 refers to multi stranded conductors.

Exact areas for specific number of strands can be found in cable provider catalogues.

# **Development - technical services**

# **Development - technical services**

Elpress is one of Europe's leading manufacturers of electrical crimping systems and has 60 years of experience in application solutions in everything from nuclear power plants to small electronic devices.

Products in electrical applications are subjected to both mechanical and thermal loads. Elpress invests considerable resources to achieve success through continuous product development towards better value, quality and performance.

For this purpose there is modern laboratory equipment for, among other things:

- High current testing
- Mechanical tensile strength testing
- Cyclic current testing
- Vibration testing
- Corrosion testing
- Resistance determination

The activities also include theoretical studies, prototype development, technical documentation and advice etc. The competence of the staff together with good laboratory and calculation aids is a strong competitive tool both in terms of consultancy services and their own development projects.

Test of terminals.

 $Laboratory\ report.$ 

Tests according to IEC 61238-1-1 in own premises

Flexible and customized test setups

# General comments on the use of Elpress terminals for voltages of 12 kV and above

#### **Terminals**

The modern and easy-to-use cable terminations for 12 to 36 kV PEX insulated cable consisting of prefabricated modules or even fully finished terminations, provide no or very little restriction in the use of terminals with type designations AK, AKK or KRF. This also includes the "top pins" with the type designation AKP.

One detail to take into account when using KRF terminals outdoors is that this terminal is equipped with an inspection hole that must be sealed. Your supplier of cable terminations can provide its specific solution.

Terminals type AK, AKK or "top pin" AKP can today be used on high voltage cable terminations where solutions are available up to 84 kV. In case of doubt, always consult with your cable termination supplier for specific solutions for different issues regarding technical details regarding the design. When installing cable terminations for oil impregnated paper cable where an oil reservoir is used, manufacturers usually have their own specially designed solutions for the conductor connections.

## Terminals type AK

Terminal type AK is used at termination of an Al conductor for connection to busbars and apparatus sockets

# Terminals type AKK

Terminals of type AKK are used at the end of an Al conductor for connection to a Cu bus bar.

# Through connectors type AS

Through connectors type AS used when splicing aluminium-conductors.

# Through connectors type AKS

Through connectors of type AKS are used for jointing of Al conductors to Cu conductors.

# Joint sleeves PEX insulated cable against PEX insulated cable

In Sweden, four types of splice are currently used in the voltage range 12 to 36 kV. These are tape, heat shrink, cold shrink and push-on joints. All these joints are designed to accept AS, AKS and KSF through connectors. No connectors with conical ends are required today. Different manufacturers have their own solutions that are designed to take care of, for example, the punch holes and the distance between the insulation edge and the through connector.

Always note the joint manufacturer's directions regarding maximum lengths and diameters of the connectors. If you are not sure, or if the installation instructions do not indicate what you are considering, consult your joint supplier.

At higher voltages, e.g. 52 and 84 kV, other requirements are placed on the through connectors depending on the joint design and design. However, there are solutions where "normal" through connectors are used together with filler materials in the voltage range up to 145 kV.

# PEX insulated cable against oil impregnated cable

When installing a transition splice between cables with oil impregnated insulation and PEX insulation at voltages of 12 kV and above, connectors with partitions must be used, regardless of the splicing method and make. AKS, KSF-M and AS connectors always have partitions.

# Oil impregnated against oil-impregnated cable

When splicing two cables with this type of insulation, connectors of type AS, AKS, or KSF can be used, whether it is an oil tube connector or a "dry" heat shrink connector.

# SYSTEM ELPRESS

**System Elpress** symbolizes our **cornerstones**—safety and quality. In order to achieve a secure connection, we offer **certified solutions** of the combination cable, terminal and tool.

For perfect crimping connections, **Elpress Academy** offers Crimping Technology training and seminars.

For non-standard solutions you can **consult** us and let our own production and laboratory verify your solution. A preventive **service** maintenance of the tool is the base for the system to work.

Certification, Academy, Consulting and Service is System Elpress – your secure connection!

13

We manufacture tested systems for electrical connectors and their tools. You get a secure connection.

# SYSTEM ELPRESS CERTIFICATION

### We offer:

Tool delivered with a calibration certificate

Verified and tested combination of cable, terminal and tool

Certified solutions for customized product development

Product approval in accordance with IEC, UL, DNV and CSA

Third part quality and environment certification in accordance with ISO9001 and ISO14001

In order to achieve a secure connection we offer certified solutions of the combination cable, terminal and tool.

This is so that you as customer can feel secure when you use our system and be sure that a safe connection will be made when our products are used correctly.

# FOR YOUR SAFETY

#### The System includes:

- Terminal, connector
- Crimping tool
- Correct cable
- Trained and skilled operator

The system is developed and tested in accordance with existing norms and standards, for example IEC.

#### Product development

- Customized solutions
- Specialized segment solutions
- Leading technology in our industry
- Innovative products

# SYSTEM ELPRESS CONSULTING

# We offer:

Tests in laboratory
Problem solving
Technical and customer support
Customized terminals and tools
Audits and validations at your premises

A well educated personnel ensures the final quality of products and services.

Our Academy certificate is a Quality Assurance Document between you and your customer.

# SYSTEM ELPRESS ACADEMY

# We focus on the following four areas:

Utility sector and installers
Transformer manufacturers
Traction/Train manufacturers
Wind Power manufacturers

# **Utility and installation personnel**

General training for all staff. Provides a general knowledge of crimping in all areas;

- Terminals below 10 mm<sup>2</sup>
- Cu-connectors over 10 mm<sup>2</sup>
- Al-connectors from 16 mm<sup>2</sup>
- · Cu-branching
- Bolt connections
- Deep earthing
- Standards and requirement
- Safety and maintenance
- Quality inspection

The program combines theory and practice and concludes with a written test. Course participants will receive certificate after the completion of their training.

Possibility to customize the training so the content fits the needs of the company.

# **Transformer manufacturers**

For operators who work daily in the production. The aim is to train personnel in the special conditions applying in the transformer manufacturing. The training focuses on areas like;

- Management of tools
- Calculations and preparation for crimping
- Work procedure
- Quality inspection
- Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

We can provide education for all personnel such as operators, supervisors, designers and quality departments. The education includes a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment.

Each training has a level that suits everyone, such as operators, designers, supervisors and quality managers. In addition, there is the possibility to customize the training so that the content fits the needs of the company. You also decide whether the training should be company-based or held in Elpress's training facilities.

# Train and vehicle manufacturers

Educate staff in the special demands and external conditions that apply in the manufacturing of rail traffic. The training concerns;

- Management of tools
- Work procedure
- Elpress Dual-technology
- Crimp technique
- Quality inspection
- · Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

Education for all personnel such as operators, supervisors, designers and quality departments. Provides a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment. Completed training gives a certificate.

# Wind Power manufacturers

Educate staff in the special demands and external conditions that apply in the manufacture of wind turbines. The training concerns;

- Management of tools
- Work procedure
- Elpress Dual-technology
- Crimp technique
- · Quality inspection
- · Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

Education for all personnel such as operators, supervisors, designers and quality departments. Provides a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment. Completed training gives a certificate.

# SYSTEM ELPRESS SERVICE

Preventive maintenance agreements

Calibration of certified tools

Repairs/maintenance of tools

Crimping systems for rent

Sales of spare parts

# Preventive maintenance agreements

Our Service offers you a flexible solution for enhanced security, with rapid service and high availability:

- Planned and preventive maintenance guarantees high performance for your equipment.
- Regular service intervals minimize the risk of unforeseen stoppages by indicating any safety or functional defects and by recommending measures to avoid such problems.
- Regular service intervals are normally implemented every 12 months at a fixed price.

# Elpress Basic Elpress Advance

Elpress Basic service agreement includes following points:

- General inspection of the tool
- Safety aspects in accordance with declaration of conformity
- Function test
- Checking of accessories, e.g. crimp dies etc.
- Issue of Certificate

The inspection follows Elpress final inspection and acceptance inspection requirements.

Elpress Advance service agreement includes following points:

• The price is based on the service level solution and

• A certificate is issued after the equipment has

The maintenance can be performed at your

complied with calibration requirements.

• Elpress Basic + corrective maintenance

Includes the Calibration/certification and wear & tear repairs at a fixed price.

# Calibration of certified tools

The calibration follows the same inspection points and requirements as Elpress Basic, but it is the customer's responsibility to send the tool for calibration.

# Purchased a new product?

equipment.

premisses.
