ELPRESS

Certification and standards

IEC - International Electrical Commission
- issues international standards which, although not always compulsory, do have strong influence and are used as a basis within the international terminal trade.

DNV - Det Norske Veritas
Elpress KR/KS, KRF/KSF and KRT/KST terminals meet DNV's rules for classification of ships and Det Norske Veritas' Offshore Standards. The terminals are approved for installations on ships and mobile "offshore" units.

Environment policy

Elpress products and services, are designed to minimise environmental impact, to protect limited resources and to take the life-cycle perspective into consideration in connection with:

- Product development.
- Manufacturing.
- Use and withdrawal of products.

Each and every Elpress employee shall prioritize the personal responsibility for safety, quality and the environment within his daily work routine. Information and education will constitute normal activity for increased awareness.

Our suppliers and commissioned partners are chosen and influenced in such a way that they can comply with and add value to our Policy.

Our customers are informed about our environmental dedication and our partners have all the necessary knowledge to assist and advise all parties of the distribution chain and safeguard the proper use, stocking and final disposal of our products.

We continuously evaluate the results of our Policy and openly distribute information on our work and impact on the environment.

Our environment work has resulted in Elpress being certified to ISO 14001 since 2004.

Our certificate, with number EMS 531083, is issued by the internationally recognized BSI, British Standards Institution, of England.

Quality

For us, quality means trying all the time to be the best in the business. That's why we are constantly developing our products, methods and ourselves, since knowledge is perhaps the most important component for achieving the highest quality. Our work on quality has resulted in Elpress being certified to ISO 9001 since 1992.

Our certificate, with number FM20987, is issued by the internationally recognized BSI, British Standards Institution, of England.

Verification of products

There are quite a lot of different test standards and approval routines that may be applied on cable connectors and terminations. Due to this and the variation in contents between standards from different countries one has to make a selection. Elpress had previously applied primarily Swedish, UK and German standards but lately IEC and EN Standards, where the latter rapidly will substitute the old national standards. In many cases, there are also UL, DNV-Det Norske Veritas or other approvals on our products.

KR/KS, KRF/KSF, KRFS, KRT/KST UL approved in accordance with file no. E205350.

UL certified products are delivered with UL marking on the label including the UL file number and/or certification code for control by an UL inspector. The Certificate can be downloaded at UL Product IQ.

What's special with Vehicle applications?

Demanding applications

During several years Elpress has had contact with vehicle manufacturers of demanding applications like trains, trams, trucks, or with their sub-suppliers of cable assemblies.

In these contacts it has been more and more apparent that there is quite a spectrum of different requirements that is regarded highly relevant to the use in rolling stock.

Electrical properties

- First of all comes of course the requirements of electrical properties and mainly the current carrying capacity. These requirements must be seen in the light of high current peaks in lowest possible conductor areas and the requirements of flexible conductors.
- Vehicle applications may include tough corrosion resistance requirements.
- Vibrations as well as static loads may occur and be of the most different types. The connection must stand these loads.

Tests

Elpress has gone through which tests that may be used to verify that our terminals and connectors together with our crimp system meet the Vehicle application requirements. Together with customers the following test standards have been regarded relevant:

- Electrical properties - IEC 61238-1, Class A. This is a relatively new standard corresponding to or in many cases superseding most earlier European standards.
- Environmental requirements - DIN V 40 046, part 37. The chosen part of this German standard states a very tough test where hydrogen sulphide is used as the aggressive substance.
- Static loads normally form part of established electrical tests and this is the case also in the IEC-standard referred to above. The load limits are often rather low but in the Swedish standard SEN 245010 relatively high load limits are given and these are therefore used here.
- Vibration tests are hard to carry through in a representative manner. This is due to the very different load patterns that every build-in case may give. A European test for railway applications - EN 50155 - has been used in applicable parts.

System technology

Crimping is a System Technology. This means that it is the combination of a chosen terminal or connector and a matching crimp tool, all determined by the specific conductor that will result in the desired connection properties.

Flexible and customized test setups

Pre-insulated terminals

General information about pre-insulated terminals

System Elpress

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection will be achieved through the proper handling of our products.

Pre-insulated terminals

Elpress ring, fork and pin terminals are made of high-class copper 99.95%. The tab and bullet terminals are made of brass or tin-bronze. All terminals are then electrolytically tin-plated for maximum corrosion protection. The terminal's neck is brazed and annealed, which means it can be crimped in any direction. The metal in the receptacles' neck is double folded. This means that the finished terminal has excellent mechanical strength and low resistance.

Insulation material

Elpress insulation sleeves are usually made from halogen-free polycarbonate, PC, which has excellent deformation properties. Furthermore, it maintains its vibration support up to high temperatures. Caution must be exercised in case of alkaline exposure. Some types of terminals have insulation of PA, nylon, which is also halogen-free, or PVC (not halogen free). The colour of the insulation sleeve indicates the cross-sectional area that the terminal is intended for:

Bright yellow sleeve	0.1 - 0.5 mm ²
Green sleeve*	0.25 - 0.75 mm ²
Red sleeve	0.5 - 1.5 mm ²
Blue sleeve	1.5 - 2.5 mm ²
Yellow sleeve	4-6 mm ²

* or transparent white

The table below shows properties for Elpress pre-insulated terminals insulation. Note the properties are general since the influences of environment, temperature, etc. can affect the terminals. Polycarbonate, PC, and polyamide, PA, are halogen-free, i.e. they do not contain any of the substances fluoride, chlorine, bromide or iodine.

Insulation material	Max. temperature	Halogen-free	Flammability class, UL94
PA (Polyamide)	105°	Yes	V0
PC (Polycarbonate)	115°	Yes	V2
PVC (Polyvinyl chloride)	60°	No, chlorine	V0

Easy-entry

Elpress insulation sleeves are usually of the easy-entry type, which means it guides the conductor strands properly into the terminal neck. The risk of back-folded and stray strands, possibly resulting in flash-overs or reduced electrical properties, is therefore eliminated.

Easy-entry.

Labelling of pre-insulated terminals

Elpress pre-insulated terminals are labelled with logo, cross sectional area and any applicable screw diameter to facilitate work and controllability. When contact crimping pre-insulated terminals, Elpress crimping dies/tools leave an imprint in the insulation sleeve so that all crimped terminals can be inspected retrospectively in accordance with the requirements of many standards.

Samples of Elpress crimped pre-insulated terminals.

Designation example

Cat no. A1532R (E, FLS, G etc.)

A = pre-insulated
 15 = cross sectional area (1.5 mm²)
 32 = characteristic size (Hole 3.2 mm)
 E = end connectors
 FLS = receptacles, rolled type
 FLSF = receptacles, fully insulated rolled type
 FLSH = multiple tabs, rolled type (piggy back)
 FLST = receptacles, rolled type, tin-bronze
 G = fork terminals
 GB = flanged fork terminals
 H = tabs (male)
 HA = bullets (male)
 HO = sockets (female)
 K = hook terminals
 PSK = parallel connectors
 R = ring terminals
 SF = blade terminals
 SFB = blade terminals, flanged
 SFK = blade terminals, short pin
 SFL = blade terminals, long pin
 SFN = blade terminals, with tab
 SR = pin terminals
 SRK = pin terminals, short pin
 SK = through connectors
 SKW = through connectors with heat shrink insulation

Crimping of Elpress pre-insulated ring terminal with hand tool GSA0760.

Ring terminals 0.1 - 6 mm²

- Material: Cu 99.95%, tin plated Cu/Sn, brazed neck.
- PC insulation has easy-entry, PC and PA are halogen-free.

s = strip length

Type PSK must be crimped with GSA0760 (C) and with two crimps.

Certified Miniforce handtools for pre-insulated terminals

Properties:

- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- symmetrical and clearly marked crimping positions
- adjustable for changes after long use
- tested with Elpress terminals
- unique mechanism that reduces maximum handle force from 450 N right down to 250 N (model C)
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- light and versatile design without sacrificing on strength
- model C has extra long handles for the use of two hands
- withstands at least 80,000 crimps
- supplied with certificate for basic quality monitoring

GSA0760 and GSA0760C

Tested and certified mechanical Miniforce hand tools for symmetrical crimping of pre-insulated terminals 0.5-6 mm².

Special properties:

- locator that holds the terminal in the right position when crimping and facilitates work in, for example, tight spaces
- die nests are easily checked with die nest gauge, ESAQ0760

mm ²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,5-6	20-10	GSA0760	Oval	0,548	203	76
0,5-6	20-10	GSA0760C	Oval	0,607	256	80

Crimp geometry

Follow procedures (1) and (2) when attaching the terminal in the locator on tool GSA0760(C).

GSEA0340C

Tested and certified mechanical Miniforce hand tool for crimping pre-insulated terminals 0.5-2.5 mm² as well as pre-insulated and uninsulated end sleeves 0.25-4 mm².

mm ²	AWG	Name	Crimp geometries	Net weight (kg)	Length mm	Width
0,5-2,5 / 0,25-4	20-14 / 22-12	GSEA0340C	Oval, Trapezoid	0,613	256	80

Crimp geometries

GSW0560C

Tested and certified mechanical Miniforce hand tool for crimping 0.5-6 mm² through connectors with heat shrink insulation of the SKW type.

mm ²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,5-6	20-10	GSW0560C	Oval	0,612	256	80

Crimp geometry

Certified handtools for pre-insulated terminals

Properties:

- crimping positions are clearly marked
 - adjustable for changes after long use
 - tested with Elpress terminals
 - locking function that ensures a complete crimp
 - emergency release if the crimping process has to be interrupted
 - unique design that makes the tools thin and versatile
 - minimal muscle strength required for complete crimp
 - suitable for both right and left-handed users
 - withstands at least 50,000 crimps
- supplied with certificate for basic quality monitoring

DSA0115

Tested and certified mechanical hand tool for symmetrical crimping of pre-insulated terminals 0.14-1.5 mm².

Special properties:

- easy to check red die nests easily with die nest gauge, ESAQ0760

Crimp geometry

mm ²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,14-1,5	26-16	DSA0115	Oval	0,445	192	66

DSA0725

Tested and certified mechanical hand tool for symmetrical crimping of pre-insulated terminals 0.5-2.5 mm².

Special properties:

- die nests are easily checked with die nest gauge, ESAQ0760

Crimp geometry

mm ²	AWG	Name	Crimp geometry	Net weight (kg)	Length mm	Width
0,5-2,5	20-14	DSA0725	Oval	0,449	192	66

ESAQ0760 - die nest gauge

Go/no-go gauge for inspection of die nests in the following tools: DSA0115, DSA0725, GSA0760(C), GSEA0340C.

Special properties:

- handle part Ø 8 mm
 - easy to check tool die nest
 - The go and no go dimensions are checked in the die nests upon calibration.
- Contact Elpress for more information on calibration and quality management

mm ²	AWG	Name	Net weight (kg)	Shaft ø	Length mm

End terminals

General information about end terminals

With Elpress end terminals you avoid splayed conductors and reduce the risk of cable breaks. Moreover, they create a lasting contact pressure and a large contact area.

Crimped End terminal.

Crimped TWIN end terminal.

Easy-entry.

Designation example

Cat. no. A4-12ET

A = pre-insulated

B = uninsulated

4 = area (4 mm²)

12 = Length metal sleeve

ET = end terminal

ET2 = TWIN end terminal

CSA certification

CSA, Canadian Standards Association, is a Canadian organisation that certifies products according to US standards. Elpress end sleeves of type A..ET / ETT / ETD, B. .. ET, A...ET2/ETT2/ETW2 is CSA certified according to US standard C22.2 No 158 and UL 1059 according to file No. 247206. End terminals of the type A..ET/B...ET/A... ET2 are intended for stranded Cu-conductors 26 AWG to 500 MCM, equivalent to the metric sizes 0.14 mm² to 240 mm². To be used together with Elpress crimping tool.

System Elpress

System Elpress consists of terminals and tools that are adapted and tested together for best performance. This ensures that users will feel confident when using our systems, and that a secure terminal is achieved through the proper handling of our products.

Using an Elpress crimping tool when crimping an Elpress end terminal means that a terminal is obtained according to DIN 57609.

End sleeves

Elpress pre-insulated and uninsulated end terminals are made of 99.95% copper and are tin plated. The end terminals have dimensions according to DIN 46228 with a few exceptions (see note in tables). The insulation boot is made of PP (polypropylene) and has a shape comparable to easy-entry, see image. Elpress end terminals are used when you need a perfect connection for the cable end.

Colour codes for pre-insulated end terminals and TWIN-end terminals

AWG	Area mm ²	Standard colour W Elpress type ET	Colours acc. to DIN 46228 Elpress type ETD	Alternative colour T type ETT

Use the tool socket closest to the total area of the terminal.

Certified Miniforce handtools for end terminals

Properties:

- locking function which only releases once crimping is complete
- emergency release if the crimping process has to be interrupted
- adjustable in case of changes due to long-term use
- tested with Elpress terminals
- ergonomic handle suitable for all users
- maximises the quality of work
- reduces the risk of occupational injuries
- light and versatile design without compromising durability
- model C has extra long handles for the use of two hands
- withstands at least 80,000 crimps
- supplied with certificate for basic quality monitoring

GSEA0340C

Tested and certified mechanical Miniforce hand tool for crimping pre-insulated terminals 0.5-2.5 mm² as well as pre-insulated and uninsulated end sleeves 0.25-4 mm².

Cu terminals

General information about Elpress Cu-terminals

System Elpress

System Elpress consists of terminals and tools that are designed and tested together to give a certified crimping result. This ensures that users will feel confident when using our systems, and that a secure connection is achieved through the proper handling of our products. By using Elpress Cu-connection elements together with one of Elpress crimp systems one obtains a connection that has been tested according to the requirements of IEC 61238:1.

Cu terminals

Elpress copper connectors are made of pure copper 99.95%. We manufacture tube terminals type KR/KRF/KRD/KRT, through connectors type KS/KSF/KSD/KST for stranded conductors, IEC 60228 class 2, and multi-stranded conductors IEC 60228 class 5 such as C-sleeves primarily pre-splicing of Cu-lines and many customised products. For flexible and stranded Cu conductors, terminals of type KR/KRF and through connectors of type KS/KSF are used. Terminals type KRD/KRT and through connectors type KSD/KST are normally used for stranded Cu conductors from and including 500 mm². Terminals of type KR/KRF/KRD/KRT are used mainly in termination to bus bars and apparatus of copper, while through connectors, of type KS/KSF/KSD/KST, are used mainly in the splicing of copper conductors in cable assemblies. They can also be used for straight splicing of earth conductors. With a branching sleeve, type C, one splices and branches earth conductors, lightning conductor installations and the like.

UL-approved terminals

KR/KS, KRF/KSF, KRFS, KRT/KST UL approved in accordance with file no. E205350. UL certified products are delivered with UL marking on the label including the UL file number and/or certification code for control by an UL inspector. The certificate can be downloaded at UL Product IQ.

DNV-approved terminals

Elpress KR/KS, KRF/KSF and KRT/KST terminals meet DNV's rules for classification of ships and Det Norske Veritas' Offshore Standards. The terminals are approved for installations on ships and mobile "offshore" units.

Number of crimps

Normally one crimp is required up to and including 150 mm² and two or three crimps for larger areas. Note, however, that another number of crimps may be needed in some cases, see tables for tool dies. If possible, crimps should be placed next to each other with a couple of mm spacing between each one. Overlap is sometimes inevitable.

Crimp sequence for two crimps.

Crimp sequence for three crimps.

Marking of Cu terminals

Elpress marking system for copper terminals shows logotype, cable area and type number for hexagonal die. This system allows checks that the correct tools have been used when contact crimping because the die number automatically becomes embossed during the contact crimping.

Marking tube terminals

25 (on neck)
Type No. for hexagonal die (Elpress logo) 150 12 F (on the palm)
150 = Cu conductor in mm²
12 = Hole size
F = KRF

Marking through connectors

Elpress Logo
Type No. for hexagonal die
16 F (possible screened conductor area and earthing sign)
16 = Cu conductor in mm²
F = KSF

Marking C-sleeves (example C70-95)

Area marking (side 1)
25-120 / 140-190
min - max (mm² per conductor) / min - max (total mm² in the sleeve)
Elpress logo, Die number (side 2)
BCx, "x" corresponds to die number

KRF tube terminals 16 - 800 mm²

- Material: Cu 99.95%, tin plated Cu/Sn.
- Inspection hole
- For stranded (class 2) and multi-stranded (class 5) Cu conductors
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- UL approved (KRF16-500 mm²), DNV approved (16-400 mm²).

Example of marking KRF: 17 (neck) Elpress logotype 70 10F (palm)

17 = Die No. 70 = mm² 10 = palm hole for M10 F = type KRF for stranded and flexible conductors.

KRFS tube terminals with narrow palm 50 - 400 mm²

- Material: Cu 99.95%, tin plated Cu/Sn.
- Inspection hole
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- Easy to install via cable gland, allows for pre-installation.
- The width of the palm is less than or as wide as the neck.
- UL-approved, DNV approved.

Example of marking KRFS: 17 (neck) Elpress logotype 70 10F (palm)

17 = Die no. 70 = mm² 10 = palm hole for M10 F = type KRF for stranded and flexible conductors.

t = palm thickness, s = strip length

KRF angled terminals 45° 10 - 150 mm²

- Material: Cu 99.95%, tin plated Cu/Sn.
- Inspection hole
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- UL approved (35-150 mm²). DNV approved (16-150 mm²).

Example of marking KRF: 17 (neck) Elpress logotype 70 10F (palm)

17 = Die No. 70 = mm² 10 = palm hole for M10 F = type KRF for stranded and flexible conductors.

s = strip length

KS/KSF through connectors with partition 10-500 mm²

- Material: Cu 99.95%, tin plated Cu/Sn.
- For stranded (class 2) and multi-stranded (class 5) Cu conductors.
- For multi-stranded Cu conductors Elpress recommends the DUAL system.
- With partition to prevent oil leakage.
- UL approved (1-500 mm²). DNV approved (16-400 mm²).

Examples of marking: 20 95F (Elpress logotype is included on the marking.)

20 = Die No. 95 = mm² F = type KSF for stranded and flexible conductors 111 = screen mm²

DIN 46235 tube terminals 6 - 1000 mm²

- Din tube terminals for Cu conductors.
- Material: Cu 99.95%, tin plated Cu/Sn.
- Dimensions according to DIN 46235, the number of crimps is indicated on the neck of the terminal.
- For crimping DIN 46235 terminals, use dies according to DIN 48083.

Example of plate marking: 95 10 95 = mm² 10 = palm hole for M10

Crimping with Dual System

DUAL system

This system has been developed to meet the hard combine requirements from manufacturers with tough applications with the best result.

The DUAL technology combines the desired properties from an optimal hexagonal crimp with those of a limited indent crimp. This results in tight contact surfaces without damage to the conductor strands.

The patented Elpress Dual system

We call this technology, which is patented, the Elpress DUAL System where the name points at split crimp sequence that starts with a hexagonal crimp and, without separation of the dies, is finished by an additional indent crimp.

Tools for DUAL crimping

The DUAL crimp is performed by crimp tools PVX1300, PVX1300C2, crimp heads DV1300, DV1300C2 or DV250 using the crimp dies DBxx available from 10 to 400 mm². The crimp heads are powered by the normal Elpress hydraulic pumps P4000 (foot pump), PS710 (mains and battery operated hydraulic pump) or P1000 (mains powered pump).

Check measures

An effective way to check correct crimps during work is to perform measurements of achieved crimp heights, N-measures in the following table, regularly or as first and last piece inspection.

N measures

Area mm ²	Die (for DV1300 & PVX1300)	Die (for DV1300C2 & PVX1300C2)	Die (for DV250)	N-measure mm
10	13DB8	13DCB8		6,7
16	13DB9	13DCB9		7,5
25	13DB11	13DCB11		9,0
35	13DB13	13DCB13		10,6
50	13DB14,5	13DCB14,5		11,8
70	13DB17	13DCB17		13,6
95	13DB20	13DCB20		16,0

Cross section of DUAL crimp

Tools for DUAL System

PVX1300/PVX1300DB

Tested and certified battery-powered crimp gun for contact crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm², Al-terminals 16-400 mm² (-240 solid), DIN 46235 10-300 mm², C sleeves up to 240 mm² total area (C95-120).

Properties:

- ergonomic design ensures optimum balance in the user's hand
- crimp monitoring with warning light and signal when the correct pressure/full crimp is not achieved
- LED work lighting
- possibility of documentation of each crimp for unique service control
- crimp force 124 kN (13 tonnes)
- crimps/charging: 60-120 depending on size and temperature
- crimp time: 4-12s depending on size
- usage temperature -20°C to +40°C
- Li-Ion Makita, 5.0 Ah, 18V
- charger Li-Ion Makita, charging time 22 min 110-240VAC 50-60Hz
- DUAL: 10 - 300 mm²

PVX1300C2/PVX1300C2DB

Tested and certified battery-powered crimp gun for crimping Cu-terminals, type KR/KRF and KS/KSF 10-400 mm², C-sleeves up to 240 mm² total area (C95-120).

Properties:

- ergonomic design ensures optimum balance in the user's hand
- crimp monitoring with warning light and signal when the correct pressure/full crimp is not achieved
- LED work lighting
- possibility of documentation of each crimp for unique service control
- crimp force 124 kN (13 tonnes)
- usage temperature -20°C to +40°C
- Li-Ion Makita, 5.0 Ah, 18V
- charger Li-Ion Makita, charging time 22 min 110-240VAC 50-60Hz
- DUAL: 10 - 300 mm²

V1300

Tested and certified crimp head for crimping Cu-terminals, type KR/KRT 10 mm², KS/KST 10 mm², KRF/KRD/KRT 16-400 mm², KSF/KSD/KST 16-400 mm², Al-terminals 16-400 mm² (-240 solid), DIN 46235 10-300 mm², C sleeves up to 240 mm² total area (C95-120). Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

Properties:

- working pressure 63 MPa (630 bar)
- crimp force 130 kN (13 tonnes)
- versatile and easy-to-use steel crimp head

mm ² (Cu)	mm ² (Stranded Al)	mm ² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

Crimp geometries

CE

DV1300C2

Crimp head with patented DUAL technology for crimping Cu-terminals, type KR/KRF and KS/KSF 10-300 mm². Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

Properties:

- crimp head for the patented DUAL technology that provides optimised hexagonal crimping + a indent crimping in two integrated steps
- working pressure 63 MPa (630 bar)
- crimp force 130 kN
- no die holders are needed for DUAL dies
- other accessories (without DUAL function) for crimping Cu can be used
- DUAL: 10 - 300 mm²

mm ² (Cu)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

CE

DV250

Tested and certified crimp head with patented DUAL technology for crimping Cu-terminals, type KRF/KSF 120-400 mm². Used in combination with foot pump P4000 or the electrically powered pump PS710 (battery powered version of PS710E is also available).

Properties:

- crimp head with the patented DUAL technology that provides optimised hexagonal crimping + a certain amount of indent crimping in two integrated steps
- working pressure 63 MPa (630 bar)
- crimp force 250kN (25 tonnes)
- large crimp area
- no die holders are needed for DUAL dies
- Other accessories (without DUAL function) for crimping both Cu and Al-terminals can be used
- DUAL: 120 - 400 mm²

mm ² (Cu)	mm ² (Stranded Al)	mm ² (Solid Al)	Name	Crimp geometries	Net weight (kg)	Length mm	Width	Height

Table stand for Cu- and Al-terminals

TS1300, TS1300CU, TS1300AL

The TS1300 is a table stand that can be used with crimp heads DV1300C2 or V1300C2-AL.

The table stand is designed for operators with high frequency use of the C2 crimp head. With the table stand you get a stable, safe and easy use of the C2 crimp head.

Earthing and braids

Flat, flexible braids

Earthing braids with flat, twined, highly flexible Cu-conductor, uncoated 0,09 - 400 mm².

- Broad range of flexible and highly flexible flat earth braids.
- Customer unique solutions are available.
- Braids in other materials, such as stainless steel, aluminium or insulated connectors could also be provided.

Uncoated earthing braid: FJCU area (mm²) - length (mm) - Hole size

Example: FJCU50-100-8

Flat, flexible braids (tin plated)

Earthing braids with flat, twined, highly flexible Cu-conductor, tin plated 0,09 - 400 mm².

- Broad range of flexible and highly flexible flat earth braids.
- Customer unique solutions can be made.
- Braids in other material, such as stainless steel, aluminium or insulated connectors are also available.

Tin plated earthing braid: FJCUSN area (mm²) - length (mm) - Hole size

Example: FJCUSN50-100-8

Round, flexible connections (un-insulated)

Un-insulated slacks with many possibilities to connect Elpress terminals.

Such as KSF/KRF Cu tube terminal range, AlCu bi-metallic range

AKK/AKS or Al range AK/AS.

Round, twined, highly flexible Cu-conductor, tin plated or uncoated, 0,06 - 600 mm².

- Broad range of flexible and highly flexible flat earth braids.
- Customer unique solutions available.
- Braids in other materials, such as stainless steel, aluminium or insulated connectors are also available.

Uncoated earthing braid (round): FLCU area (mm²) - length (mm) - Hole size

Example: FLCU50-100-8

Round, flexible connections (un-insulated, tin plated)

Un-insulated slacks with many possibilities to connect Elpress terminals.
Such as KSF/KRF Cu tube terminal range, AlCu bi-metallic range AKK/AKS
or Al range AK/AS.

Round, twined, highly flexible Cu-conductor, tin plated or uncoated, 0,06 - 600 mm².

- Broad range of flexible and highly flexible flat earth braids.
- Customer unique solutions could be made.
- Braids in other materials, such as stainless steel, aluminium or insulated connectors could also be provided.

Tin plated earthing braid (round): FLCUSN area (mm²) - length (mm) - Hole size

Example: FLCUSN50-100-8

Round, flexible connections (insulated)

Insulated slacks with many possibilities to connect Elpress terminals.
Such as KSF/KRF Cu tube terminal range, AlCu bi-metallic range AKK/AKS
or Al range AK/AS.

Round, twined, highly flexible Cu-conductor, tin plated or uncoated, 0,06 - 600 mm².

- Customer unique slack, possible to make according to customer requirements.
- Insulated braids in other materials, such as stainless steel, aluminium or insulated connectors could also be provided.

Insulated, uncoated slacks: FKCU area (mm²) - length (mm) - Hole size

Example: FKCU50-100-8

Slacks

Type	Conductor mm ²	Hole	Description	Used with (combine terminals freely)

Lightweight and versatile designed pumps based on customer needs

PS710

The PS710 is an electrically driven pump for crimping with advanced control and monitoring of crimping progress. A flexible system for a wide range of applications with high performance and reliability for professional use. The pump is suitable for cabling manufacturers as well as for fitters working in the field. The PS710 can be used for all types of crimping or cutting. The PS710 has a power source for all types of crimping.

Technical data:

- possibility to use different pressure ranges, 0 - 700 Bar
- can be used with a PC on a computer network with a printer, does not apply to the PS710R
- oil flow at 20 bar: 0.6 litre/min (PS710D 1.2 litre/min)
- oil volume: 1.0 litre
- oil type: HYDREX MV 22 or similar
- crimps/battery charge: 120 crimps with Cu 150 mm²
- ambient temperature: -22 to 55°C
- protection: IP54
- mains operation 85-276VAC 50-60Hz
- Li-ion battery 28,8V, 3,0 Ah
- meet CE requirements: Safety of machinery 2006/42/EC, Electromagnetic compatibility 2014/30/EU, Low Voltage Directive 2014/35/EU, ROHS 2014/35/EU, WEEE 2012/19/EU
- weight approx. 12,4 kg
- compact dimensions 370 x 170 x 280 mm

The pump consists of three basic versions, each with customisation options.

PS710D

- For cabling manufacturers. used with crimping station CS2500

Properties:

- unique electronic control system together with special PC software
- analysis and process monitoring/control, SPC, for tracking each crimp
- LCD Display with keypad for full status information of pump to the fitter
- communication with PC in real time provides instant quality control
- integrated communication via CAN with Elpress CS2500
- high flow hydraulic pump for fastest possible crimping
- can be used with PC on a computer network with printer

Pump PS710D

Name	Net weight (kg)	Length mm	Width	Height
PS710D	12,4	370	170	280

CE PS710E

For fitters working in the distribution network or industry.

Pump PS710E

Properties:

- small and light weight, which makes the product easy to use in every situation
- maximum performance, can be used both with Li-ion battery 28.8 V or 220V mains power
- LCD Display with keypad for full status information of pump to the fitter
- able to store and document crimps in the control system
- PC communication via USB
- to be used with crimp heads and cable cutters
- Elpress ergonomic handle ERGOCOM, with wireless communication can be selected for
- charger 230 VAC 50 Hz, 10.8-28.8 V, charging time 65 min

Name	Net weight (kg)	Length mm	Width	Height
PS710E	12	370	170	280

CE PS710E251 and PS710E501*

Contains:

- pump E-version
- cable
- hydraulic hose 2.4 m or 5.0 m with wireless communication ERGOCOM
- battery
- charger
- carrying strap
- 110-240VAC 50-60Hz

Name	Gross weight (kg)	Length mm	Width	Height	Note
PS710E251	24,5	370	170	280	PS710E pump with carrying strap. Ergocom hose 2.4 m and power cord EU, battery and charger
PS710E501	26,0	370	170	280	PS710E pump with carrying strap. Ergocom hose 5.0 m and power cord EU, battery and charger
PS710E501-US	26,0	370	170	280	PS710E pump with carrying strap. Ergo hose 5.0 m and power cord US, battery and charger
PS710E251-US	24,5	370	170	280	PS710E pump with carrying strap. Ergo hose 2.4 m and power cord US, battery and charger

ERGOCOM hoses are not available in US/North American market.

Accessories for PS710x

Operating handle for operation of pump PS710. Ergonomically designed handle that reduces the load on the operator at the workstation. ERGOCOM is controlled via Bluetooth and ERGO is wired. Available in different designs depending on the length of the hydraulic hose.

Name	Pcs/ pack	Note
HYD.SLANG KPL. 2,4M ERG PS710E	1	Hydraulic hose (2.4 m) for PS710E, with ERGO handle
HYD.SLANG KPL. 5M ERGO PS710E	1	Hydraulic hose (5 m) for PS710E, with ERGO handle
HYD.SLANG KPL.2,4M ERGO PS710R	1	Hydraulic hose (2.4 m) for PS710R, with ERGO handle
HYD.SLANG KPL. 5M ERGO PS710R	1	Hydraulic hose (5 m) for PS710R, with ERGO handle
HYD.SLANG KPL. 2,4M ERGOCOM	1	Hydraulic hose (2.4 m) for PS710R, with ERGOCOM handle (bluetooth)
HYD.SLANG KPL. 5M ERGOCOM	1	Hydraulic hose (5 m) for PS710R, with ERGOCOM handle (bluetooth)
FCU-PS710R	1	Foot pedal for PS710R
FCU-PS710D&E	1	Foot pedal for PS710D and PS710E
BÄRREM PS710	1	Carrying strap for all PS710 versions

ERGOCOM hoses are not available in US/North American market

Other hydraulic pumps

CE

P1000

Secure, lean produced 2-step pump as an economical alternative for industrial use where simplicity and reliability is required.

Properties:

- hydraulic pressure: Working range 0-63 (70) MPa, adjustable
- hydraulic flow: Low pressure (up to 1.5 MPa) approx. 0.8 l/min, High pressure (more than 1,5 MPa) 0.2 l/min
- oil volume 2 l (usable 1,8 l)
- oil hydraulic oil ISOVG32
- mains connection 230 V AC 50/60 Hz
- allowable voltage fluctuation: Rated voltage $\pm 5\%$
- electric motor 0.25 kW, Class E insulation, open type commutated motor 230 V, 50/60 Hz single-phase, Max. current: 2.8 A (5 min.)
- protection class IP20
- environment temperatures 0 - 40°C
- CE-approved: Machine safety 98/37/CE, LVD 73/23/EEC
- hydraulic hose 2.4 m, quick coupling, manoeuvre handle 12 V AC
- mains cord 1.5 m earth plug

Name	Net weight (kg)	Length mm	Width	Height
P1000	14	250	384	150

CE

P4000

Properties:

- unique version in high strength aluminium alloy
- ergonomic design
- smooth, anodised (electro-oxidised) surfaces – easy to keep clean
- highly efficient, two-stage pump system with fast feed
- single foot-operated pressure relief (tool return) after automatic stop when crimping is complete
- 2.2 m hose with quick coupling
- standard pressure setting 630 bar/63 MPa, (max. setting 700 bar)
- safety valve for return at all pressures
- smooth transport mode for the hose
- special output for pressure monitoring

Name	Net weight (kg)	Length mm	Width	Height
P4000	8,8	500	180	280

Crimp station for industrial crimping of KRF/KSF terminals 10 - 300 mm²

CS2500

Elpress crimp station CS2500 offers efficient production with the greatest possible personal safety. Advanced, intelligent properties combined with simplicity make the product unique.

Properties:

- designed for continuous production of electric Cu-terminals, 10-300 mm²
- quick locking of the terminal using low force shortens the overall time for crimping
- automatic setting of crimp force up to 250 kN, provides optimal service life for tools and accessories
- only one crimp necessary throughout the work area
- integrated Elpress DUAL System
- hydraulic pump PS710D with control, monitoring and error reporting
- operated with a foot pedal
- CE approved, meets the requirements of the Safety of machinery directive
- software Analyzer for analysis and report printout of crimps
- 110-240VAC 50-60Hz

Crimp station CS2500.

Analyzer - software for analysis of crimps and system calibration

The Analyzer program is used to ensure quality crimps and save data to quality documents. By simple means, all crimps can be studied in a PC environment where they get their own ID number for full traceability. The unique SPC tool, Statistic Process Control, makes it possible to consider crimping as a measurable process. Analyzer is a statistical program for systematic studies of variations in the crimp process. Furthermore, you can export, import, print or save graphs, calibration data, batch reports etc.

Properties:

- Elpress Analyzer improves overall quality
- helps the user
- provides a process improvement tool
- measures and shows all crimps
- supports preventive maintenance of equipment
- creates traceability and documentation
- makes communication easy
- increases user skills
- eliminates incorrect crimps
- comes with instructions for use

Analyzer, measures and analyses each individual crimp.

Some important comments on contact crimping

About System Elpress

There is a wide range of electrical terminals today, and it can be difficult to know if you have chosen the right solution for your installation.

A first step is to ensure that a system is chosen, consisting of terminal, tools and a standard conductor.

In order for this combination of material to be classified as a system, there must be common test documentation, a type test according to a standard relevant to the material.

There may also be a need to identify the correct terminal depending on the cable class. Cables are divided into different classes depending on their structure.

With System Elpress you get a complete solution, KRF/KSF in combination with Dual can be combined with all Cu cable classes. Elpress systems for aluminium indented crimping are a robust solution that can be used with all types of Al cables.

Not choosing a system carries great risks. All terminals are designed with respect to a specific tool system. Small differences in dimensions of terminals and tools can lead to serious consequences, such as hot running or fire.

Terminals

Elpress terminals have been developed over 60 years of continuous work to always meet the highest standards.

Our terminals are designed to be able to operate at a continuous temperature of 90°C and to always be able to carry the same load that the relevant cable area can handle.

This means, among other things, that tubes for our KRF/KSF are dimensioned to be adapted to the cable's conductivity. This type of terminal should be crimped with a hexagonal geometry that provides a symmetrical shape that distributes crimp force evenly and ensures that thin strands are not damaged shortening the lifetime of the connection.

Our aluminium terminals are designed according to the same criteria and requirements as mentioned above, and should be crimped with a punch tool that ensures that the aluminium insulating oxide layer is broken and that good points of contact are created between conductors and terminal.

Cables

Elpress terminal systems are designed to be used in conjunction with cables according to IEC 60228. This is an international standard used all over the world and describes the structure and conductivity of a cable (Ω/km) The norm divides cables into classes as shown below.

Class 1
Solid conductor

Class 5
Flexible conductor

Class 2
Stranded conductor

Class 6
High flexible conductor

Types of conductor

Cables in each class shall have mechanical and electrical properties that meet the requirements of the norm, which means that they can be used with System Elpress without special adaptation. In addition to the classification of conductors, the differences between cables are mainly in the design of the insulation.

Hexagonal crimping.

Indented crimping.

Trained users

Another important aspect of a system is a knowledgeable and trained operator. Good and safe work requires knowledge of materials, regulations and the importance of using a system solution. We offer company-adapted training that includes both theoretical and practical parts.

Standards for contact crimping

Standards for electrical terminals

SEK Svensk Elstandard is appointed by the government to be responsible for all standardisation within the electrical area in Sweden.

The Standards are established mainly through international and European collaborations within the International Electrotechnical Commission (IEC) and CENELEC (Comite' Européen de Normalisation Electrotechnique). SEK represents and coordinates Swedish companies and authorities.

These standards are available on the SEK website. There are also manuals that show regulations and recommendations for different types of installations.

For type testing of electrical terminals, the current standard is IEC 61238-1-1, it supersedes all national standards.

It has been active since 1993 and was last updated in 2018 and is thus the standard that best meets the requirements that can be imposed on today's installations.

In addition to this, there are a large number of more industry-specific standards for railways or switchgear where, in addition to the requirements of IEC 61238-1-1, there may be a need for vibration and environmental testing.

SEK - Svensk elstandard, <https://elstandard.se/>

IEC, <https://www.iec.ch/>

CENELEC, <https://www.cenelec.eu/>

Tests against standard

Many existing products for electrical terminals are older than IEC 61238-1-1, this does not mean that they have to be retested against the new standard to be acceptable, the standard they were tested against at launch applies. This is rarely a problem as they are likely to be used in installations of the same age. In newer installations with higher demands on current and temperature, it is important to choose materials tested according to current standards.

Crimp results

For a good crimp result, you have to ensure clean conductor surfaces, without visible oxide layers.

A good cable stripper guarantees clean stripping without damage to individual strands, follow Elpress instructions for stripping lengths.

Crimping tools should be checked before starting work, to avoid the risk of injury and to ensure a good result.

The crimp dies are the key to a successful crimping process, whether they are hydraulically or manually operated.

It very important that all tool parts are kept dry and clean and that they are regularly checked for damage.

Damage and/or contamination of tool parts can lead to a deterioration in the end result and shortened tool life.

Use and safety instructions

Instructions and directions

Elpress hydraulic and mechanical tool systems are some of the safest on the market. Safety requires that instructions and directions are available and followed closely. Each Elpress tool is therefore accompanied by detailed instructions on how to use the tool. These instructions should be read carefully before use, in the best interests of the operator.

Correct use of the tools:

- increases productivity
- increases tool life
- ensures the quality of work done
- minimises the risk of accidents

Safety rules

Below are some simple and common rules that we at Elpress recommend all operators to follow:

- Before starting work with a crimp tool, a thorough visual inspection should be carried out. Pump, crimp head, forks, couplings, hoses and other accessories must be checked to ensure that they are faultless and clean. The correct placement of the inserts in the forks should also be checked before starting work.
- All operators must wear personal protective equipment such as A51 gloves, goggles and safety shoes.
- Hydraulic pressure must not be applied to a hose that is heavily bent or knotted. The hose is made for particularly high pressure and cannot be replaced by another type.
- Hydraulic tools must never be carried in the hose or coupling.
- Operate with caution, do not drop heavy objects on the hydraulic hose. This can damage the steel reinforcement and cause leakage. If leakage occurs, oil under high pressure may come into contact and penetrate the skin resulting in internal injury. If this happens, contact a doctor immediately.
- The tools must be serviced and calibrated at regular intervals.
- Make sure that the correct tool or tool insert has been selected for the terminal and conductor to be crimped.
- Check that the installation is unpowered before carrying out work. The tools are not designed for "Live working".
- Keep in mind that there is very high crimp pressure during work. Therefore, never stand in front of a tool in the direction of crimping force.
- Pay attention to the risk of crushing and cutting injuries during work. This applies to all types of crimping tools and cable cutters.
- If there is a suspicion of failure of a crimp system, always contact the Elpress Service Centre.

Check of crimping results

In order to ensure that the tool has achieved the predetermined shape change for each cable terminal, the crimp result shall be measured. This shape change provides both mechanical strength and good electrical properties.

Hexagonal crimping

For terminals and through connectors of copper the following applies:

- The "N" dimension is checked in the direction of the crimp.
- Measure with calipers and compare with the table's "N" dimensions.
- If the measurement result exceeds the "N" dimension (according to the table that follows) after correct contact crimping, contact the Elpress service centre.

Crimp die table type KRF/KSF with Dual dies (N measurement)

Type KRF/KSF with DUAL dies

KRF/KSF	DB-die nr	max N mm
10	8	6,7
16	9	7,5
25	11	9,0
35	13	10,6
50	14,5	11,8
70	17	13,6
95	20	16,0
120	22	17,7
150	25	20,3
185	27	21,7
240	30	23,9
300	32	25,7
400	38	30,5

Crimp die table type KRF/KSF (N-measurement)

Type KRF/KSF with B-dies

KRF/KSF	Die No.	max N mm
10	8	6,3

500	42	30,4
630	53	38,4
800	53	38,4

Oval crimping

For Cu **branching sleeves**, the "h" dimension must be checked. This is done at the maximum height of the crimped oval, preferably with calipers. The measurements are compared to the table below. If the "h" measurement is exceeded, after a contact crimping, contact the nearest Elpress service centre. See measurement points on the image below.

Crimp die table type C sleeves (H-dimensions)

C-die No.	Sleeve	max h mm
5	C6-10	12.5
6	C16-25	15.5
8-9	C25-50	22.0
13	C50-70, C70-95	26.5
15	C95-120	30.8
18	C150-185	44.5
21	C240-300, C23	54.4

Indent crimping

For Al terminals, the measurement "T" must be checked, which is measured at the bottom of the indent that the punch has achieved on the terminal. This is best done with special calipers, contact Elpress if necessary. Compare measured "T" measurement with table. If the "T" measurement is exceeded, after indented crimping, contact the nearest Elpress service centre. See measurement points on the image below.

Crimp die table type AK/AS (T-measurement)

Type AS/AK/AKK	Matrix	Punch	max T mm
AS/AK/AKK			
16	P13M/TP13M	P13D/TP13D	6.8

1000	W60M	W60D	36.0
1200	W70M	W70D	41.0

Bolt joints

Bolt joints

Users/installers of bolted connectors always have to adhere to, and follow electrical codes and norms in the local region where they are making such installations. The information below is general and hence, should never be seen as an installation instruction.

The installation of a terminal with bolt joint for electrical transmission requires special attention. It is important that this is done in

a correct manner, as important as the contact crimping at the other end of the terminal as described above. The joint must achieve a sufficiently high clamping force, distributed in a desirable manner and ensure the electrical properties over a very long time under high and varying loads of different characteristics. It is very important to follow the installation instructions.

These are based on theoretical calculations, verified tests and experience from field studies. Tightening must be carried out in a controlled manner using torque tools, where the relevant screw is tensioned to the specified torque. The accuracy of the tool is of great importance. The clamping force of a properly tightened screw shall create a contact area large enough to ensure good conductivity, without the risk of overheating. In order for the clamping force to be distributed evenly and create a sufficiently large contact area, **hard flat washers must always be used**, type BRB HB200 SMS 70, under screw head and nut. See image below. This applies regardless of the hardness of the conductive materials (which are softer than HB200). Otherwise, there is risk of large deformation of the conducting material that reduces the tension, which can increase the risk of inadequate contact area and overheating.

Tension washers

The use of different types of locking elements or spring washers often increases the risk of settlement. If a spring washer of type DIN 6796, with a very high clamping force, is positioned and secured between e.g. nut and the hard flat washer, it can provide an increased margin towards excessively high settlement.

The diameter of the tension washer should be less than or equal to the flat washer's, even after tightening fully. Otherwise, the risk of settlement at the outer edge of the flat washer increases where the clamping forces are concentrated.

When using spring washers, 1 is sufficient and it is preferably placed on the opposite side of the terminal.

Bolt joint with spring washer.

Mounting the terminal against the connection rail

Max. 2 terminals of the same size on the same screw. Current load should be checked.

Preparatory:

- Clean contact surfaces from dirt, oxide layers and grease using a steel brush and denatured alcohol. This is especially important for aluminium. Surfaces that are tinned, nickel-plated, silver plated must not be brushed.
- Petroleum jelly or contact grease reduces corrosion risk on cleaned surfaces

Fastener selection:

- Screws and nuts of strength class 8.8.
- Greased galvanized screws provide the least dispersion of the pre-tension force.
- Choose stainless A4-80 in environments when there is a high risk of corrosion.

Recommended tightening torque

Thread	Steel 8.8 *		Steel 8.8 *	Steel 10.9 *		Steel 10.9 *	Stainless *		
	Mv	Ff	p	Mv	Ff	p	Mv	Ff	P
-									
M5	5,5	6,6	118,0	8,0	9,2	164,0	5,5	6,2	111,0
M6	9,5	9,2	114,0	13,0	13,0	160,0	9,5	8,6	107,0
M8	23,0	17,0	116,0	32,0	24,0	164,0	22,0	16,0	109,0
M10	45,0	27,0	92,0	64,0	38,0	129,0	45,0	25,5	88,0
M12	78,0	40,0	125,0	110,0	56,0	175,0	76,0	37,0	116,0
M16	200,0	75,0	156,0	280,0	110,0	229,0	185,0	69,0	144,0

Mv = tightening torque (Nm)

Ff = pre-tensioning force (kN)

p = flat pressure (N/mm²)

FZB = electroplated + gloss chromed

FZY = electroplated + hard chromed

FZM = FZM= mechanically galvanized

* (FZB, FZY, FZM)

A4/80

Selection of washers:

- Always select hard flat washers of the BRB, HB200 type.
- The tension washer can normally be excluded. If a tension washer of type DIN 6796 is used, it must be placed between the screw head/nut and the flat washer. It must never be placed directly against an electrical contact surface without a flat washer in between. The flat washer must have an external diameter at least as large as the tension washer.
- 1 spring washer is sufficient and it should be placed on the rear of the busbar, between nut and hard flat washer, see diagram.

Installation:

- The screws must be tightened with torque tools so that tightening is controlled.
- Torque wrenches must be calibrated regularly. Oil the screw when installing. Even if the torque is recorded correctly, the pre-tension force depends entirely on the friction.
- Tightening torque according to the table above. Accuracy better than $\pm 5\%$.
- The terminal palm and busbar may be of different materials.

Al/Al gives a weaker joint. It is important to clean and use contact grease. Tension washer + flat washer can reduce the risk of settlement.

Al/Cu gives a higher risk of corrosion and settlement, use contact grease.

Cu/Al provides low risk of galvanic corrosion when the rail is made of Al.

Cu/CU provides the best joint, good contact and small risk of settlement.

Service and maintenance

Service and maintenance

Our service department maintains, repairs, checks, calibrates and certifies Elpress tools and power sources.

Following a review of the equipment by the service department, certificates are issued that verify the performance of the tools. To ensure that your crimped terminals maintain a high and even level of quality, regular checks shall be done of the crimping tools.

We offer:

- Contract preventive maintenance, Elpress Basic and Elpress Advance
- Calibration of tools
- Repairs (servicing of tools)
- Rental of crimping equipment

Preventive maintenance

Elpress service offers a flexible service solution for increased security with fast service and high availability. Our service agreements are available in 2 levels, Elpress Basic and Elpress Advance. To sign a service agreement with Elpress means the following:

- Planned and preventive maintenance ensures better performance for your equipment.
- Regular service intervals minimise the risk of unforeseen stoppages by indicating any safety or functional defects and recommending measures to avoid these problems
- Regular service intervals are normally implemented every 12 months for a fixed price
- The price is based on the service level and tool equipment.
- A certificate is issued after the equipment has complied with calibration requirements
- Calibration can also be done on-site at the customer

Elpress Basic

This forms the basis of a service agreement and includes the following points:

- General inspection of the tool
- Safety aspects according to declaration of conformity (compliance with the Machinery Safety Directive, Low Voltage Directive, EMC Directive).
- Function test
- Checking of accessories, e.g. crimp dies etc.
- Issue of Certificate
- The inspection follows Elpress final inspection and acceptance inspection requirements.

Elpress Advance

Elpress Advance includes:

- Elpress Basic + corrective maintenance
 Includes calibration with certification and consumables repairs at a fixed price.

Calibration with certification of tool

Calibration follows the same points and requirements as Elpress Basic, but it is the customer's responsibility to submit the tool for calibration.

Rental of contact crimping equipment

Sometimes the accumulation of work can be greater than can be expected, or individual projects may require more resources than usual and then it is possible to rent equipment at Elpress. When repairing equipment for a company, Elpress can rent tools to the company if required, until the original equipment is repaired and returned.

Purchased a new product?

Send the Product registration form to Elpress and Elpress Basic is included for free the first year.

Information

More information is available from the service department:
<https://www.elpress.net/en/products/system-elpress/service/>

Technical information

Connecting materials

Elpress uses copper, brass and aluminium as terminal materials.

The copper and brass products are electrolytically tin plated for increased corrosion resistance. In a bimetal (copper aluminium) terminal, the copper part is untreated.

Brass

Brass is mainly used for flat pin sleeves in areas up to 6 mm², where good suspension properties are desired.

Brass is an alloy of about 70% copper and about 30% zinc and has very good cold form properties.

Copper

The copper used by Elpress for terminals has a purity of at least 99.95 %. Its excellent properties for use in electrical terminals are among the following:

- high conductivity (only silver is better)
- high corrosion resistance
- good formability
- good sealability

In manufacturing the neck of the terminal element is soft soldered in order to obtain as good form properties and good enclosure around the conductor as possible during the contact crimping.

This then provides a terminal that exhibits low transitional resistance and good mechanical properties.

Aluminium

The aluminium used for through connectors and cable terminals has a purity of at least 99.7 % and its excellent qualities are:

- low weight
- strong, in relation to its weight
- good electrical conductivity, approximately 60% of the conductivity of copper
- easy to work with

Conductor design

Cable standard IEC 60228 provides:

Information about materials, construction and resistance values for both copper and aluminium conductors.

Class 1 solid conductor

Class 2 stranded conductor

Class 5 flexible conductor

Class 6 highly flexible conductor

UL-approved terminals

KR/KS, KRF/KSF, KRFS, KRT/KST UL approved in accordance with file no. E205350. UL certified products are delivered with UL marking on the label including the UL file number and/or certification code for control by an UL inspector.

The certificate can be downloaded at UL Product IQ.

MCM and AWG cross-reference table to the corresponding area in mm²

MCM No.	Area mm ²	AWG No.	Area mm ²
250	127	36	0,013
300	152	34	0,020
350	177	32	0,032
400	203	30	0,051
450	228	28	0,080
500	253	26	0,13
550	279	24	0,20
600	304	22	0,33
650	329	20	0,56
700	355	19	0,65
750	380	18	0,82
800	405	17	1,04
850	431	16	1,31
900	456	15	1,65
1000	507	14	2,08
1100	557	13	2,62
1200	608	12	3,31
1300	659	11	4,17
1400	709	10	5,26
1500	760	9	6,63
1600	811	8	8,37
1700	861	7	10,6
1800	912	6	13,3
1900	963	5	16,8
2000	1013	4	21,2
		3	26,4
		2	33,6
		1	42,4
		1/0	53,5
		2/0	67,4
		3/0	85,5
		4/0	107

Remarks:

1. The information in this table comes from catalogues published by respected cable providers and does not refer to official standards.
2. The types relating to AWG vary depending on the different design of the conductors, i.e. the number of strands.

AWG > 20 refers to single strand conductors.

AWG ≤ 20 refers to multi stranded conductors.

Exact areas for specific number of strands can be found in cable provider catalogues.

Development - technical services

Development - technical services

Elpress is one of Europe's leading manufacturers of electrical crimping systems and has 60 years of experience in application solutions in everything from nuclear power plants to small electronic devices.

Products in electrical applications are subjected to both mechanical and thermal loads.

Elpress invests considerable resources to achieve success through continuous product development towards better value, quality and performance.

For this purpose there is modern laboratory equipment for, among other things:

- High current testing
- Mechanical tensile strength testing
- Cyclic current testing
- Vibration testing
- Corrosion testing
- Resistance determination

The activities also include theoretical studies, prototype development, technical documentation and advice etc. The competence of the staff together with good laboratory and calculation aids is a strong competitive tool both in terms of consultancy services and their own development projects.

Test of terminals.

Tests according to IEC 61238-1-1 in own premises.

Laboratory report.

Flexible and customized test setups.

General comments on the use of Elpress terminals for voltages of 12 kV and above

Terminals

The modern and easy-to-use cable terminations for 12 to 36 kV PEX insulated cable consisting of prefabricated modules or even fully finished terminations, provide no or very little restriction in the use of terminals with type designations AK, AKK or KRF. This also includes the "top pins" with the type designation AKP.

One detail to take into account when using KRF terminals outdoors is that this terminal is equipped with an inspection hole that must be sealed. Your supplier of cable terminations can provide its specific solution.

Terminals type AK, AKK or "top pin" AKP can today be used on high voltage cable terminations where solutions are available up to 84 kV. In case of doubt, always consult with your cable termination supplier for specific solutions for different issues regarding technical details regarding the design.

When installing cable terminations for oil impregnated paper cable where an oil reservoir is used, manufacturers usually have their own specially designed solutions for the conductor connections.

Joint sleeves PEX insulated cable against PEX insulated cable

In Sweden, four types of splice are currently used in the voltage range 12 to 36 kV. These are tape, heat shrink, cold shrink and push-on joints. All these joints are designed to accept AS, AKS and KSF through connectors. No connectors with conical ends are required today.

Different manufacturers have their own solutions that are designed to take care of, for example, the punch holes and the distance between the insulation edge and the through connector.

Always note the joint manufacturer's directions regarding maximum lengths and diameters of the connectors. If you are not sure, or if the installation instructions do not indicate what you are considering, consult your joint supplier. At higher voltages, e.g. 52 and 84 kV, other requirements are placed on the through connectors depending on the joint design and design. However, there are solutions where "normal" through connectors are used together with filler materials in the voltage range up to 145 kV.

PEX insulated cable against oil impregnated cable

When installing a transition splice between cables with oil impregnated insulation and PEX insulation at voltages of 12 kV and above, connectors with partitions must be used, regardless of the splicing method and make. AKS, KSF-M and AS connectors always have partitions.

Oil impregnated against oil-impregnated cable

When splicing two cables with this type of insulation, connectors of type AS, AKS, or KSF can be used, whether it is an oil tube connector or a "dry" heat shrink connector.

SYSTEM ELPRESS

SYSTEM ELPRESS

System Elpress symbolizes our **cornerstones** – safety and quality. In order to achieve a secure connection, we offer **certified solutions** of the combination cable, terminal and tool.

For perfect crimping connections, **Elpress Academy** offers Crimping Technology training and seminars.

For non-standard solutions you can **consult** us and let our own production and laboratory verify your solution. A preventive **service** maintenance of the tool is the base for the system to work.

Certification, Academy, Consulting and Service is System Elpress – your secure connection!

Certified Tool
EIPRESS

GSA0760

miniforce

Made in Sweden

V058401910069

*We manufacture tested systems for electrical connectors
and their tools. You get a secure connection.*

SYSTEM ELPRESS CERTIFICATION

We offer:

Tool delivered with a calibration certificate

Verified and tested combination of cable, terminal and tool

Certified solutions for customized product development

Product approval in accordance with IEC, UL, DNV and CSA

Third part quality and environment certification in accordance with ISO9001 and ISO14001

In order to achieve a secure connection we offer certified solutions of the combination cable, terminal and tool.

This is so that you as customer can feel secure when you use our system and be sure that a safe connection will be made when our products are used correctly.

FOR YOUR SAFETY

The System includes:

- Terminal, connector
- Crimping tool
- Correct cable
- Trained and skilled operator

The system is developed and tested in accordance with existing norms and standards, for example IEC.

Product development

- Customized solutions
- Specialized segment solutions
- Leading technology in our industry
- Innovative products

Quality & environment certified and approved according to

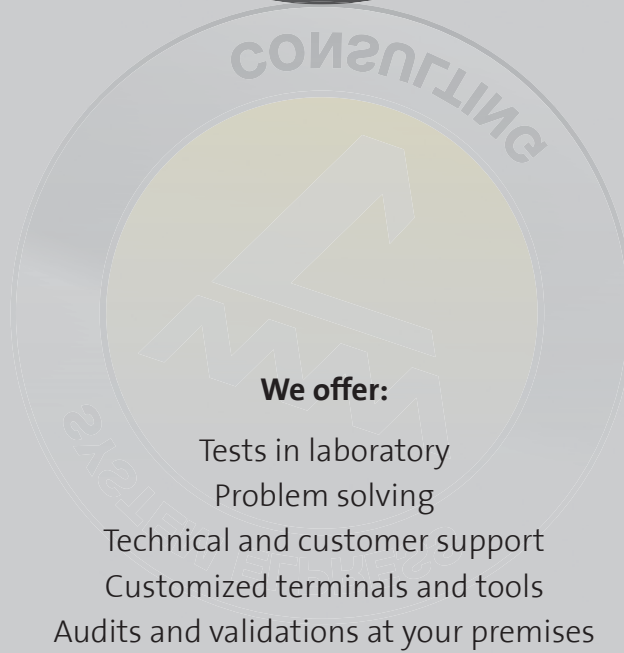

- ISO 14001
- ISO 9001
- DNV
- UL

*We have the necessary resources for you
to maintain the highest quality*

SYSTEM ELPRESS CONSULTING

We offer:

- Tests in laboratory
- Problem solving
- Technical and customer support
- Customized terminals and tools
- Audits and validations at your premises

WHY CONSULT US?

We have been developing, manufacturing and marketing complete cable crimping systems for electrical connectors with more than 50 years of experience. We have therefore the best knowledge and equipment for your requirements and demands.

You will have access to:

- Our Technical Departments that designs and develops customized products and solutions according to your requirements.
- Our Production Team who can manufacture unique solutions.
- Our laboratory who can supply for example
 - Electrical tests
 - Mechanical tests
 - Corrosion- and environmental tests

Contact us and let us assist you.

*A well educated personnel ensures the final quality of products and services.
Our Academy certificate is a Quality Assurance Document between you and your customer.*

SYSTEM ELPRESS ACADEMY

We focus on the following four areas:

- Utility sector and installers
- Transformer manufacturers
- Traction/Train manufacturers
- Wind Power manufacturers

WHO AND HOW DO WE EDUCATE?

Utility and installation personnel

General training for all staff. Provides a general knowledge of crimping in all areas;

- Terminals below 10 mm²
- Cu-connectors over 10 mm²
- Al-connectors from 16 mm²
- Cu-branching
- Bolt connections
- Deep earthing
- Standards and requirement
- Safety and maintenance
- Quality inspection

The program combines theory and practice and concludes with a written test. Course participants will receive certificate after the completion of their training.

Possibility to customize the training so the content fits the needs of the company.

Transformer manufacturers

For operators who work daily in the production. The aim is to train personnel in the special conditions applying in the transformer manufacturing. The training focuses on areas like;

- Management of tools
- Calculations and preparation for crimping
- Work procedure
- Quality inspection
- Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

We can provide education for all personnel such as operators, supervisors, designers and quality departments. The education includes a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment.

A follow-up of the certificates is necessary

Each training has a level that suits everyone, such as operators, designers, supervisors and quality managers. In addition, there is the possibility to customize the training so that the content fits the needs of the company. You also decide whether the training should be company-based or held in Elpress's training facilities.

Train and vehicle manufacturers

Educate staff in the special demands and external conditions that apply in the manufacturing of rail traffic. The training concerns;

- Management of tools
- Work procedure
- Elpress Dual-technology
- Crimp technique
- Quality inspection
- Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

Education for all personnel such as operators, supervisors, designers and quality departments. Provides a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment. Completed training gives a certificate.

Wind Power manufacturers

Educate staff in the special demands and external conditions that apply in the manufacture of wind turbines. The training concerns;

- Management of tools
- Work procedure
- Elpress Dual-technology
- Crimp technique
- Quality inspection
- Safety in use
- Preventive maintenance in daily production

The training consists of a theoretical and a practical part and ends with a written test. Course participants will receive certificate after the completion of their training.

Education for all personnel such as operators, supervisors, designers and quality departments. Provides a thorough knowledge of calculations, tool selection and management, problems and solutions and quality assessment. Completed training gives a certificate.

A follow-up of the certificates is necessary

*Preventive maintenance agreements
secure the quality of your connection*

SYSTEM ELPRESS SERVICE

We offer:

- Preventive maintenance agreements
- Calibration of certified tools
- Repairs/maintenance of tools
- Crimping systems for rent
- Sales of spare parts

WHAT IS THE BEST SOLUTION FOR YOU?

Preventive maintenance agreements

Our Service offers you a flexible solution for enhanced security, with rapid service and high availability:

- Planned and preventive maintenance guarantees high performance for your equipment.
- Regular service intervals minimize the risk of unforeseen stoppages by indicating any safety or functional defects and by recommending measures to avoid such problems.
- Regular service intervals are normally implemented every 12 months at a fixed price.
- The price is based on the service level solution and equipment.
- A certificate is issued after the equipment has complied with calibration requirements.
The maintenance can be performed at your premises.

Elpress Basic

Elpress Basic service agreement includes following points:

- General inspection of the tool
- Safety aspects in accordance with declaration of conformity
- Function test
- Checking of accessories, e.g. crimp dies etc.
- Issue of Certificate

The inspection follows Elpress final inspection and acceptance inspection requirements.

Elpress Advance

Elpress Advance service agreement includes following points:

- Elpress Basic + corrective maintenance
- Includes the Calibration/certification and wear & tear repairs at a fixed price.

Calibration of certified tools

The calibration follows the same inspection points and requirements as Elpress Basic, but it is the customer's responsibility to send the tool for calibration.

Purchased a new product?

Send the Product registration form to Elpress and Elpress Basic is included for free the first year.

Head office and production

Elpress AB, Kramfors Sweden

Subsidiaries

- Elpress AS, Gressvik Norway
- Elpress A/S, Silkeborg Denmark
- Elpress GmbH, Viersen Germany
- Elpress China, Beijing China
- Elpress Inc, Chicago USA

Sales

- Region north Sweden, Kramfors
- Region middle Sweden, Upplands Väsby
- Region south Sweden, Gothenburg
- Sales office, Ed
- Suomi, Porvoo
- India, New Delhi

Service partners

- Hydraulikkteknikk, Hagan (Oslo) Norway
- Enkom, Vasa Suomi
- Hamburger Hochdruck Hydraulik, Hamburg Germany
- E-Tech Components, Skelmersdale UK
- Precision Hydraulics, Portland USA

Distributors och partners

- Unitronic GmbH, Düsseldorf Germany
- Enkom-Active Oy, Helsingby Soumi
- JF Knudtzen AS, Nesbru Norway
- Jobarco, Br Benthuizen Netherlands
- ACTE Sp. Z o.o., Warszawa Polen
- E-Tech Components, West Lancashire UK
