

# TEMPORARY PLUG

A temporary plug can be used with the EFLEX Square Long Bell Mouth and the standard EFLEX Square unit to prevent dirt, sand or soil entering the duct during installation.

- 1 Insert the temporary plug into the female connector of the long bell mouth, or female connector of a standard EFLEX Square unit. If installing in a cut piece of EFLEX Square the soft material can be compressed by hand.

#### NOTE

- The diameter of the temporary plug is larger than the inner diameter of the female connect, therefore, it is necessary to compress the protective cap by hand.
- All EFLEX Square standard units are supplied with a protective cap over the male end.
