

Cable Support and Fixing Systems

Linking the future

As the worldwide leader in the cable industry, Prysmian Group believes in the effective, efficient and sustainable supply of energy and information as a primary driver in the development of communities.

With this in mind, we provide major global organisations in many industries with best-in-class cable and accessory solutions, based on state-of-the-art technology. Through two renowned commercial brands - Prysmian and Draka - based in almost 50 countries, we're constantly close to our customers, enabling them to further develop the world's energy and telecoms infrastructures, and achieve sustainable, profitable growth.

In our energy business, we design, produce, distribute and install cables and systems for the transmission and distribution of power at low, medium, high and extra high voltage.

In telecoms, the Group is a leading manufacturer of all types of copper and fibre cables, systems and accessories - covering voice, video and data transmission.

Drawing on over 130 years' experience and continuously investing in R&D, we apply excellence, understanding and integrity to everything we do, meeting and exceeding the precise needs of our customers across all continents, at the same time shaping the evolution of our industry.

What links the oil and gas industry from end to end?

Cable solutions to support the sector around the world

In applications ranging from drilling, extraction and storage equipment to platform and processing facilities operation, Prysmian's state-of-the-art cable systems support many major customers in the oil, gas and petrochemical industry, along with related businesses.

Whether they're deployed in Brazil, the Gulf of Mexico, the North Sea or South-East Asia, our cable solutions are proving their value in harsh offshore and onshore environments; helping customers minimize environmental impact and achieve sustainable, profitable growth.

Prysmian Group's dedicated Components facility based in Wrexham, Wales manufactures and supplies the market with products which are widely used in industrial, commercial and domestic power distribution systems. In addition it offers products for more specialist applications such as Utilities, Railways, Oil, Gas and Petrochemical, Hazardous Areas, Wind and Solar Energy. Today's BICON® product ranges represent over 100 years of cable accessory development and quality engineering building on the pedigree of our previous company names - going back to BICC. Of course Prysmian Group's Components products are the

perfect installation accessory for the Company's vast range of quality, approved cables.

Prysmian Group's comprehensive component product range includes:

- BICON® Cable Glands
- BICON® Cable Cleats
- BICAST® Joints & Terminations
- BICON® Connectors and Tooling
- Flexo® Modular Power Systems
- Flexo® Rail products
- JEM™ Resin
- Connecta System®

From its UK base, Prysmian Group's Components is able to efficiently service the needs of its UK and overseas customers and offers a high level of pre-sales and post-sales customer service.

For further information please contact:

International Sales Office: **+44 2380 295481**
www.biconcomponents.co.uk

Prysmian Group's Components business unit, based in Wrexham, is the UK's leading manufacturer of Cable Support and Fixings Systems and offers a range that is both comprehensive and diverse. Through many years of industry experience and working closely with our customers, Prysmian Group is able to offer cleats to support and fix all cable types on the market.

Our accessory range has been designed and tested with The Prysmian Group cable products and are recommended as the preferred method of installation.

The ever popular two-bolt, hook, telcleat and claw cleats are available in a range of materials to suit a variety of applications, including heavy duty variants. Our patented Multicleat/Multistrap system and the Trefoil families offer installers several viable options for Trefoil installations.

When installing fire resistant and Low Smoke Zero Halogen cables it is important that the accessories used meet the same performance requirements as the cable so as not to impact on the system

performance in case of fire. As the UK's market leader in both of these types of cables it is no surprise that the Prysmian Group is able to offer specific fixing solutions. Look out for the FP, Afumex, FT and Saffire logos in the catalogue which highlight these.

A thermoset epoxy coating is available on all our ranges of aluminium cleats and bases, and can be specified where consideration as to the nature of the environment is one of prime concern. It offers outstanding protection in areas containing a combination of one or more of the following: saline, chemical attack, pollution, high humidity and/or high ambient temperatures.

Our cleats have been used on a vast number of major electrical engineering projects including: the Channel Tunnel, Gorgon LNG, PEARL, London Heathrow T5, Helwyn Windfarm and the Woodhead Tunnel.

Cleat selection

Cables can be mounted on supports in many ways, however if cable cleats are correctly used to do this they will satisfy the requirements of the IET 17th Edition Wiring Regulations.

522.8.4 "Where the conductors or cables are not supported continuously due to the method of installation, they shall be supported by suitable means at appropriate intervals in such a manner that the conductors or cables do not suffer damage by their own weight." (1)

522.8.5 "Every cable and conductor shall be supported in such a way that it is not exposed to undue mechanical strain and so that there is no appreciable mechanical strain on the terminations of the conductors, account being taken of the mechanical strain imposed by the supported weight of the cable or conductor itself." (1)

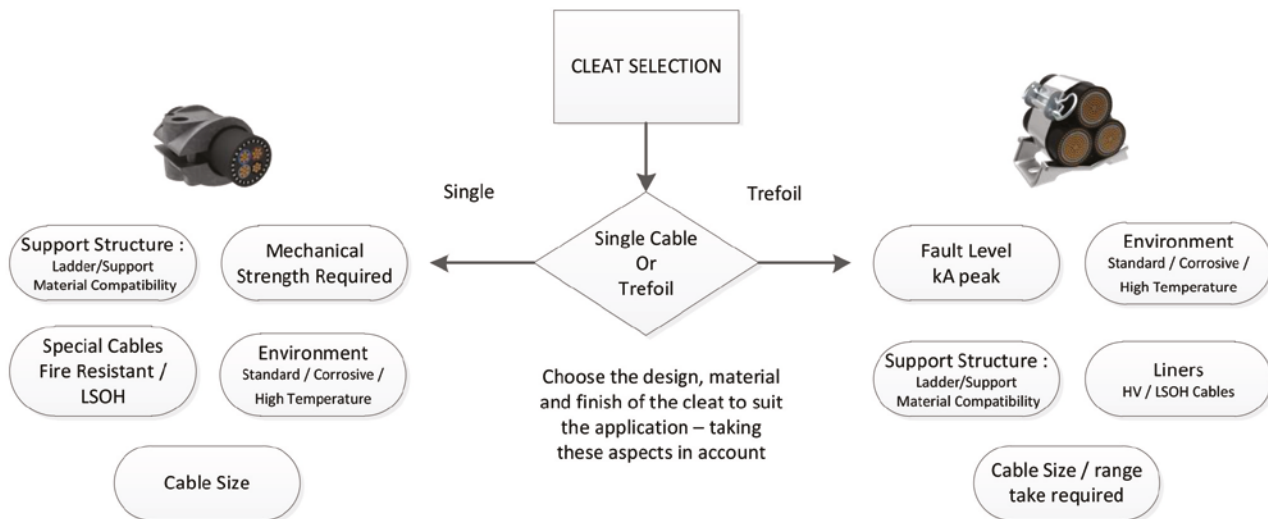

(1) 522.8.4, 522.8.5 extracts from BS 7671 – IET 17th edition wiring regulations

Cable cleats also offer the following additional advantages:

- They facilitate a neat and orderly installation allowing cables to be used at their optimum ratings whilst maximising the use of available space.
- They maintain cables in position making reworking easier and potentially safer.
- They provide restraint against short circuit forces.

This catalogue is designed to direct you to the most suitable Prysmian Components cleat for your application.

The logic tree below shows the decisions that need to be made in order to specify the correct cleat for a specific installation.

The first decision is whether or not the arrangement is a single cable or a trefoil grouping:

- When fixing a single cable the cleats should be installed in line with the IET 17th Edition – guide to use table.
- When fixing trefoil groups the controlling factor becomes the system short circuit rating and cleats should be selected and spaced according to their short circuit performance.

Correct Spacing

Single Cables

Spacings of supports for cables in accessible positions

Maximum spacings of cable fixings						
Overall diameter of cable*	Non-armoured thermosetting, thermoplastic or lead sheathed cables and non-armoured fire resisting cables.		Single wire armoured cables including fire resisting armoured cable		Mineral insulated copper sheathed or aluminium sheathed cables	
	Horizontal† 2	Vertical† 3	Horizontal† 6	Vertical† 7	Horizontal† 8	Vertical† 9
mm	mm	mm	mm	mm	mm	mm
Not exceeding 9	250	400	-	-	600	800
Exceeding 9 and not exceeding 15	300	400	350	450	900	1200
Exceeding 15 and not exceeding 20	350	450	400	550	1500	2000
Exceeding 20 and not exceeding 40	400	550	450	600	-	-
Exceeding 40 and not exceeding 50	600	800	900	1100	-	-
Exceeding 50 and not exceeding 60	750	1000	950	1100	-	-
Exceeding 60 and not exceeding 70	900	1200	1000	1200	-	-
Exceeding and above	1000	1400	1200	1400	-	-

Note:

Fire resistant fixings should be used for fire resistant cables.

* For flat cables taken as the dimension of the major axis.

The spacings shown above apply to multi-core cables.

The spacing of fixings on single core cables in a.c. installations must take account of the magnitude of forces generated under fault conditions.

† The spacings stated for horizontal runs may be applied also to runs at an angle of more than 30° from the vertical.

For runs at an angle of 30° or less from the vertical, the vertical spacings are applicable.

Cleating Cables in Trefoil

When a short circuit fault occurs in a three phase system, there is at first a period of extreme asymmetry which is then followed by a steadier more symmetrical state.

The degree of asymmetry depends on when in the cycle the fault is initiated and also the nature of the fault, e.g. three phase to earth. By convention, the "Peak" is the maximum current value achieved in the early asymmetrical period and it is at this point that the highest instantaneous force between the cables occurs.

BS EN 61914:2009 (IEC 61914) provides a formula which enables us to calculate the maximum force on a cable conductor.

$$F_t = 0.17 \cdot i_p^2 / S \quad (B.4)$$

F_t	is the maximum force on the cable conductor in a trefoil configuration for a three phase short circuit [N/m]
i_p	is the peak short-circuit current [kA]
S	is the centre to centre distance between two neighbouring conductors [m] (for Trefoil arrangements S = Cable Diameter)

Short circuit tests in accordance with BS EN 61914:2009 are performed on the most critical cleat size within its range; the Formula (B.4) can then be used to calculate the maximum force generated during the test. This maximum force figure can then be used when specifying alternative configurations of cable size and fault current – calculating the theoretical F_t for the alternative configuration and ensuring that it is less than or equal to the as tested value.

Trefoil Cleat Spacing

Trefoil cleats that are required to withstand the high forces generated by high short circuit currents will often be spaced at very regular intervals – typically matching the commonly available cable ladder (i.e. 300mm / 225mm).

The maximum short circuit current values will be quoted with the test information for each design of trefoil cleat - if a system uses larger cables or has a lower fault current it may be possible to broaden these spacings - (contact the Prysmian technical team).

As a general rule in order to create and maintain a satisfactory trefoil installation a maximum strap/cleat spacing of 900mm is preferred.

Approvals, Testing and Standards

For many years there were no British or International standards for cable cleats; Prysmian Components were actively involved in the creation of the European Standard and in progressing the standard through to it being published as the current international standard BS EN 61914:2009 (IEC 61914).

Our cleats have been tested by independent testing authorities including:

- BSTS (ASTA)
- ERDA (ASTA)
- CPRI (ASTA)
- IPH CESI (ASTA)
- ZKU

We also hold third party test reports for our LSOH cleats detailing compliance with LUL requirements.

Many of our cleats have Network Rail PADS approval numbers. Contact the Prysmian technical team for more information.

Telcleat® 385 series

- Suitable for use with cable diameters 10 to 51mm.
- Manufactured from Low Density Polythene.
- Overlapping self-adjusting ranges.
- Sunlight (UV) and weather resistant.
- One piece, single fixing design.
- Can be double stacked on a single fixing.
- Operating temperature -40°C to +60°C.
- Tested in accordance with BS EN 50368.

385AA06	26.2	34.2	25	35	43	65	22	16.4	2 1/2 x 12	M6 x 60
385AA07	31.9	41.6	10	42	52	78	25	24	2 3/4 x 12	M6 x 70
385AA08	39.3	51.1	10	50	62	91	26	35	3 1/4 x 12	M6 x 80

Method of Fixing

The cleat is opened up and placed around the cable so that the end of the cleat containing the slot will be in contact with the mounting surface, except for the 385AA01, which should be reversed to put the slot uppermost. In this case an M5 washer should be used to prevent the nut entering the slot of the cleat.

When mounting directly on channel section an adaptor plate should be used (please see page 39).

Ranger® Cleat 382 series

- Suitable for use with cable diameters 13 to 76mm.
- Overlapping, self-adjusting ranges.
- Sunlight (UV) and weather resistant.
- Made from ABS which provides good oil and chemical resistance.
- Two piece, single bolt fixing.
- Double stacking facility.
- Operating temperature -20°C to +90°C.
- 'C' Section channel location aids fixing and stacking.
- Not designed for long vertical runs.

FOS 2 = Values include a factor of safety of 2.

Heavy Duty Hook Cleat 384 series

- Suitable for use with cables diameters 25 to 80mm.
- Manufactured from glass-filled nylon.
- Two-piece, single fixing design.
- Can be double stacked on a single fixing.
- Can be installed in temporary open position to aid single person working.
- All sizes secured with 10mm fixings.
- Operating temperature -25°C to +85°C.
- For normal industrial use indoor and outdoor.
- Fits most ladder and tray systems.
- Not designed to secure cables in long vertical routes.
- Tested in accordance with BS EN 50368.

Claw Cleat (Aluminium) 370 series

- Suitable for use with cable diameters 10 to 51mm.
- Manufactured from aluminium alloy.
- Two-piece, single fixing design.
- Can be stacked to a maximum of three on one fixing.
- Operating temperature -60°C to +105°C.
- Can be used for all types of cable routes.
- Plain finish - for normal industrial areas or outdoor unpolluted areas.
- Epoxy coated versions available for harsher environments.
- Packing pieces to be used where required.
- LUL approved product register ID 1959.

Method of Fixing

In all applications the cleats should be mounted on suitable M10 fixings. When mounting directly on channel, adaptor plate 380AG02 should be used. When stacking claw cleats use packing piece 389AC03 between cleats. (Please see page 39 for selecting both of these items.)

Performance Data

Test Standard	EN 50368:2003
Type	6.1.1 Metallic
Impact Resistance	6.2.5 V. Heavy
Lateral Load	3.7 -> 8.2 kN
Axial Load	1.332 -> 5.855 kN
Needle Flame	>120 secs

Two Bolt Cleat (Aluminium) 370 series

- Suitable for use with cable diameters 51 to 159mm.
- Manufactured from aluminium alloy.
- Two-piece, two fixing design.
- Can be double stacked on common fixings.
- Operating temperature -60°C to +105°C.
- Suitable for LV & HV cables.
- Can be used for all types of cable routes.
- Plain finish - for normal industrial areas or outdoor unpolluted areas.
- Epoxy Coated versions available for harsher environments.
- Optional rubber liners available.
- Tested in accordance with BS EN 50368.
- LUL approved product register ID 1963.

Rubber Lined Cleats (Aluminium) 370 series

- Suitable for use with cable diameters 16 to 149mm.
- Manufactured from aluminium alloy.
- Sizes 05-09 - Two piece, single fixing claw design.
- Sizes 10-36 - Two piece, two fixing design.
- Can be double stacked on common fixings.
- Operating temperature -60°C to +105°C.
- Suitable for LV & HV cables.
- Can be used for all types of cable routes.
- Plain finish - for normal industrial areas or outdoor unpolluted areas.
- Epoxy coated versions available for harsh environments.
- Tested in accordance with BS EN 50368.
- LUL approved product register ID 1963.

Shoe Cleat 370 series

In order to allow for the linear expansion of larger cables the support positions are often broadly spaced. Such broad spacing would put very high point loading on the cables which could lead to long term failure. The shoe cleats are designed to allow this potentially damaging load to be spread over a significantly longer length thus avoiding any potential cable damage. Based on the 370 series of aluminium 2 bolt cleats with the shoes made from 316L stainless steel with rubber lining. The shoes are designed and formed with the correct bend radius to match the cable's expansion curve.

Contact the Prysmian Components technical team who will be able to match the correct cleat and spacing to the size of cable and installation design.

Linear Short Circuit Straps

The linear short circuit straps can be used in horizontal or vertical installations. They can be designed and manufactured to user specified interaxial spacings. Options are available for them to be supplied with or without rubber liners to meet the cable system design requirements.

Contact the Prysmian Components technical team who will be able to match the correct cleat and spacing to the size of cable and installation design.

Replace 'xxx' with 300, 400, 500, 600, 700 for required cable separation.

Heavy Duty Two Bolt Cleat (Aluminium) 370 series

- Ideally suitable for larger cables with diameters 100 to 159 mm.
- Manufactured from aluminium alloy.
- Two-piece, two fixing design.
- Operating temperature -60°C to +105°C.
- Designed to protect the cable sheaths during installation.
- Plain finish - for normal industrial areas or outdoor unpolluted areas.
- Epoxy coated versions available for harsher environments.
- Supplied with rubber liners.
- Tested in accordance with BS EN 61914.
- Spring loaded version available upon request.

Orbit Cleat 379 series

- Suitable for use with cable diameters 33 to 150mm.
- Single bolt fixing with reversible base for range taking.
- Operating temperatures -40°C to +120°C.
- Ergonomic design allows easy installation, with single tool tightening from the top side.
- Manufactured from non-magnetic, corrosion resistant 316L stainless steel.
- Liners are made from LSOH materials.
- Suitable for use with single and multicore cables with high fault current requirements.
- Suitable for standard and LSOH cable sheaths.
- Can be used in harsh environments.
- Can be used with all standard ladder and tray systems.
- Complies with BS EN 61914.

Firefix® Single Clip

- LUL Approved product register ID 1960.
- Nail fixed fire resistant clip.
- The Firefix™ system is fast easy and meets the cable support requirements of British standards: BS5839-1: 2002, BS5266-1:2011 and BS5839-8: 2006.
- Designed to be used with the Spit Pulsa™ gas nailing technology for rapid installation.
- Made from corrosion resistant stainless steel which is coated with an intumescent LSOH coating in either white or red to match the cable.
- Should be installed in accordance with BS7671 / IEE wiring regulations, or other appropriate code.
- Can be fixed to steel, block work, composite steel decking, brick or concrete.
- The fixing of the clip and installation of the cable takes just 10 seconds.

Nailing tool sold separately. Part No: PULSA800E

Installation

1. Position the FIREFIX™ clip directly on to the nail guide (No adaptors required).
2. Ensure the substrate is clear before pushing the Spit Pulsa™ tool against the substrate, and nailing the clip into position.
3. Place the cable into the clip.
4. Close clip.

Firefix[®] Double Clip

- LUL Approved product register ID 1960.
- Nail fixed fire resistant clip.
- The Firefix™ system is fast easy and meets the cable support requirements of British standards: BS5839-1: 2002, BS5266-1:2011 and BS5839-8: 2006.
- Designed to be used with the Spit Pulsa™ gas nailing technology for rapid installation.
- Made from corrosion resistant stainless steel which is coated with an intumescent LSOH coating in either white or red to match the cable.
- Should be installed in accordance with BS7671 / IEE wiring regulations, or other appropriate code.
- Can be fixed to steel, block work, composite steel decking, brick or concrete.
- The fixing of the clip and installation of the cable takes just 10 seconds.

Installation

1. Attach adaptor to Pulsa™ tool.
2. Position the FIREFIX™ clip on to the adaptor.
3. Ensure the substrate is clear before pushing the Spit Pulsa™ tool against the substrate, and nailing the clip into position.
4. Place the cable into the clip.
5. Close clip.

FIRE RESISTANT CLEATS

AP Clips

- Suitable for Prysmian FP200 Gold®, FP Plus™, FP Plus Flex™ and Afumex LSX™.
- Suitable for Draka FT30, FT120 and FT Data.
- Securely holds one cable - ideal for a single cable run.
- Made from BS EN 1652 copper strip.
- Fire tested with FP cables.
- Finished with a red or white LSOH polyester coating.
- Ideal for visible installations.
- Meets the cable support requirements of BS 5839-1:2002+A2:2008.

Claw Cleat (Cast Iron) 370 series

- Suitable for use with cable diameters 10 - 54mm.
- Hot dip galvanised finish on cast iron.
- Two-piece, single fixing design.
- Can be stacked to a maximum of three on one fixing.
- Operating temperature -60°C to +105°C.
- Can withstand a 2 hour excursion to 1000°C.
- Can be used for all types of cable routes.
- Suitable for all environments.
- Packing pieces to be used where required.
- LUL Approved product register ID 1961.
- Allows fire performance cables to meet the requirements of BS 6387:1994, BS 5839-1:2002, BS7346-6:2005 & BS8491:2008.

Technical Data

Cable and Cleat Selection			Cleat Details					
Design Number	Cable diameter		Dimensions (mm)				Weight (g)	Stud Size
	A (mm)		B	C	D	E		
	Min	Max	Max					
370CG01	10	13	22	38	46	16	227	M10
370CG02	13	16	22	38	46	16	208	M10
370CG03	16	19	25	41	46	18	232	M10
370CG04	18	22	28	45	46	19	279	M10
370CG05	21	26	32	48	46	21	299	M10
370CG06	25	32	37	54	46	24	319	M10
370CG07	31	38	43	60	46	27	395	M10

370CG09	44	54	59	73	46	33	502	M10

Method of Fixing

In all applications the cleats should be mounted on suitable fixings, see table for appropriate size. When mounting directly on channel, adaptor plates 380AG02 should be used. When stacking claw cleats use packing piece 389AC01 between cleats. (Please see page 39 for selecting both of these items).

Performance Data

Test Standard	EN 50368:2003
Type	6.1.1 Metallic
Impact Resistance	6.2.5 V. Heavy
Lateral Load	3.7 -> 8.2 kN
Axial Load	1.332 -> 5.855 kN
Needle Flame	>120 secs

Two Bolt Cleat (Cast Iron) 370 series

- Suitable for use with cable diameters 51 - 89mm.
- Hot dip galvanised finish on cast iron.
- Two-piece, two fixing design.
- Can be double stacked on common fixings.
- Operating temperature -60°C to +105°C.
- Can withstand a 2 hour excursion to 1000°C.
- Can be used for all types of cable routes.
- Suitable for all environments.
- LUL Approved product register ID 1964.
- Allows fire performance cables to meet the requirements of BS 6387:1994, BS 5839-1:2002, BS7346-6:2005 & BS8491:2008.

Multicleat/Multistrap System 378 series

- Suitable for use with cable diameters 24 to 145mm.
- Large range take on each size.
- Single or double bolt fixing.
- Operating temperatures -60°C to +105°C.
- All straps manufactured from non-magnetic 316L stainless steel.
- Plain aluminium bases - for normal industrial areas or outdoor unpolluted areas.
- Epoxy coated aluminium versions or stainless steel available for harsher environments.
- Bespoke tensioning adaptor included with every cleat and strap.
- Optional liners are available from LSOH material.
- Suitable for single core cables laid in trefoil formation with high fault current capacities.
- Suitable for use with all standard ladder and tray systems.
- Suitable for groups of dissimilar cables.
- LUL Approved product register ID 1996.
- Patent number 2082242.

Consisting of aluminium or stainless steel bases with a stainless steel strap complete with a tensioning clip the BICON™ Multicleat system offers the best flexibility for cable fixing available on the market today. With an unprecedented test portfolio and service record, the Multicleat system should be your first choice for trefoil and single cables installations requiring a high system fault current rating.

Multistraps are used as intermediate restraints and are positioned centrally between a pair of Multicleats. The standard and heavy duty products have different short circuit ratings related to their installation spacings. Please consult the following information in order to make the correct selection.

All Multicleats and Multistraps come with a disposable shear torque tensioning adaptor designed to aid the closure of the cleats and also better control the tension applied during installation. The adaptor fits into the open end of the winding pin and is used with a standard 13mm socket wrench. Any remaining slack in the strap is removed by rotating the pin and adaptor with the wrench until the adaptor shears off. This will also ensure that a consistent and correct torque is applied to every cleat and strap in the installation.

LSOH material liners are available for both the Multicleat and Multistrap, conforming to BS6853. The selection table helps to select the correct liner pack for the cleat or strap being used. Multicleats and Multistraps offer a high level of flexibility for use in unusual installations. See section on miscellaneous arrangements.

Installation Sequence

Fasten base to support with M10 fixings. Loop strap through base and around cables. Standard duty = 2 loops. Heavy Duty = 3 loops.

Pull slack into outer loop. Insert split pin from right hand side around outer layer of strap about 10mm from end. Push plastic shear torque adaptor fully onto the end of the split pin and attach 13mm socket wrench. To tension the strap rotate key anti-clockwise with the socket wrench until the adaptor shears.

Remove the shear torque adaptor and wrench. Swing the key over and engage in slots in clip.

Multicleat

Example ordering code: 377 AB 53 Strap with a 377 LSF 01 Liner

Two Bolt Type: AB, AD and JB

Base thickness 11mm

Single Bolt Type: PF

Base thickness 6mm

In all applications the Multicleat bases should be fixed with either one or two M10 fixings as appropriate

Miscellaneous Arrangements

Multicleat/Multistrap System

The Multicleat / Multistrap system is ideally suited for securing groups of cables of differing sizes. The Prysmian technical help team will be able to match the correct cleat /strap to for the size and fault rating of the cable arrangement.

Sirius Cleat 379 series

- Suitable for use with cable diameters 23 to 128mm.
- Single or double bolt fixing with reversible base for range taking
- Operating temperatures -40°C to +120°C.
- Ergonomic design allows easy installation, with single tool tightening from the top side.
- Manufactured from non-magnetic, corrosion resistant 316L stainless steel.
- Liners are made from LSOH materials.
- Suitable for single core cables laid in trefoil formation with high fault current requirements.
- Suitable for standard and LSOH cable sheaths.
- Can be used in harsh environments.
- Suitable for use with all standard ladder and tray systems.
- Complies with BS EN 61914.

Orion Cleat 376 series

- Suitable for use with cable diameters 62-186mm.
- Manufactured from aluminium alloy.
- Suitable for use on LV, MV & HV cable designs.
- Single or two bolt fixing.
- Designed for use with larger diameter single core cables laid in trefoil formation.
- Deep section cast bases aid cable installation.
- Can be supplied with rubber liners.
- Profiled versions are available to meet specific design requirements.
- Tested in accordance with EN 50368:2003.

Technical Data

Cable and Cleat Selection				Cleat Details				
Design Number		Cable Diameter (mm)		Dimensions (mm)			Fixing Size	Weight (kg)
Standard	Epoxy coated	Min	Max	A	C	B		
376TR06	376TE06	62	75	260	216	80	M12	2.484
376TR07	376TE07	75	90	295	251	80	M12	3.326

Libra Cleat 376AC series

- Suitable for use with cable diameters 24 to 76mm.
- Manufactured from aluminium alloy.
- Suitable for single core cables laid in trefoil.
- Can be used with all types of cable routes.
- Supplied complete with top fastening.
- Plain finish for indoor dry normal industrial use or outdoor unpolluted areas.
- Epoxy coated for harsher more hostile conditions.
- Operating temperature -60°C to +100°C.
- Suitable for use at a maximum system fault level of 30kA rms.

Two Bolt Version available on request

Orion Strap 376 series

Intermediate Short Circuit Straps

- Manufactured from 316L stainless steel.
- Includes rubber liner.
- Used in conjunction with the 376 Orion and 376 Orion-shaped cleats.

Please contact the Prysman Technical team for assistance

Sirius Strap 379 series

- Made from 316L stainless steel.
- Comes with LSOH liners.
- Profiled to aid easy and quick installation.
- Single bolt closing.
- Used in conjunction with the 379 Sirius cleats.

Please contact the Prysman Technical team for assistance

Performance Data

BS EN 61914	Clause	Classification
Type	6.1.3	Composite
Operating Temperature	6.2	-40°C to +120°C
Needle Flame	10.1	>120secs

BS EN 61914	Clause	Classification
Resistance to Short Circuit	6.4.4 (2 short circuits)	56.8kA rms, 125kA peak, Ø36mm, Spacing 300mm in conjunction with 379TC Sirius cleats.

TREFOIL CLEATS

Installation Equipment

Cable Rollers and Lifting Jacks

Designed with the same fixing arrangements as the 2 bolt and Shoe cleats. The rollers and lifting jacks facilitate cable system installation. The rollers can be configured in a variety of different ways – please speak to our technical team for more information.

System Repair Cleat

An innovative solution for the retrofitting of damaged cleats on old cables that cannot be moved. These custom-made retrofitting cleats can be provided on a rapid turnaround. These can be supplied with adjustable elements to overcome onsite variables.

Please contact the Prysmian Technical team for assistance

Auxiliary Stand-Off

Used to secure an auxiliary cable along the same route as an existing cable installation. Secured by the multi-strap system, the stand-off arrangement is made from a tough LSOH polymer. Used with rubber liners.

Contact the Bicon technical team to discuss your specific requirements

Miscellaneous Arrangements

Multicleat/Multistrap System

The Multicleat / Multistrap system is ideally suited for securing groups of cables of differing sizes. The Prysmian technical help team will be able to match the correct cleat /strap to the size and fault rating of the cable arrangement.

Cable Ties

Bundles of cables up to 100mm in diameter.
Available in black or natural finish.
Operating temperatures -40°C to +85°C.

Black Nylon Cable Ties

Cable and Cleat Selection		Cleat Details		
Design Number	Length (mm)	Width (mm)	Minimum Tensile Strength (kg)	Minimum Bundle Diameter (mm)
BB18S	96	2.5	8	19
BB40S	150	3.5	18	32

Insulating Pad

Insulating pads are designed for use with the 379 series Sirius and Orbit cleats. They are designed to prevent bimetallic corrosion between the cleat and the substructure. They should be used in instances when installing a stainless steel cleat onto a galvanised steel substructure.

Insulating pad

Insulating Base	Suitable for cleat size	
	379TC-	379SC-
3900010	01 - 07	01 - 08
3900011	08 - 12	08 - 12
