

Moisture Sealing

Reliable protection for moisture-sealing tasks in areas such as irrigation, refrigeration, factory cleanup areas, outdoor lighting, marine environments, and other infrastructure exposed to the elements.

Task: Moisture Sealing for Utility Service Drops

Option 1: In outdoor locations where splices are exposed to moisture, reverse wrap the connection initially with Scotch® Super 33+™ Vinyl Electrical Tape, adhesive side out. Then add a mastic tape like Scotch® Rubber Mastic Tape 2228, to moisture seal, and finish with Scotch® Super 33+™ Vinyl Electrical Tape.

Option 2: Reverse wrap the connection initially with Scotch® Super 33+™ Vinyl Electrical Tape, adhesive side out. Then apply Scotchfil™ Electrical Insulation Putty for a thicker barrier against moisture. Finish the task with Scotch® Super 33+™ Vinyl Electrical Tape for additional UV and mechanical protection.

Why do a reverse wrap? Reverse wrap allows for clean re-entry to connections if needed at a later time. Reverse wrapping is an option and not a requirement.

Why moisture seal? Moisture sealing and weather proofing your connections with premium rubber and mastic tapes helps prevent damage to your electrical systems and helps reduce the risk of unexpected and costly failures.
